

SAITAMA 犬

Year 2

Friday the 13th, May 2022.

Our Project Outlook

The Saitama Token was deployed through a fair launch in the Ethereum network on May 30th, 2021. The contract was renounced by the original deployer, and a group of 6 holders decided to take the lead and develop the project for the community.

The Saitama development team has fully doxxed (revealed their identities) and registered a legal entity in the U.S.A. named Saitama LLC to represent the project and treat it as a serious business.

In our first year, we have reached a Marketcap of 7.5 Billion USD during the token all time high in November 2021, and have gathered a community of hundreds of thousands of holders, who call themselves The Saitama Wolfpack.

We develop solutions that make DeFi simple and accessible to any level of investor helping them to attain financial well-being.

Our Options Moving to Year 2

- 1 Relock LP
in V1**
- 2 Move to an
upgraded V2
contract**

Saitama V2

PROS

Add security with multi-sig wallets and ownership of LP

Flexibility to update the contract as token and use cases evolve

Could alter tokenomics to help us grow faster and sustain that growth

Leave the meme token category behind

Reduce our supply and whitelist CEXs

Re-locking Liquidity

PROS

Peace of mind for some investors

Ability to keep relocking it again

Same tokenomics and contract from launch

The New Cycle Begins

As we approach Year 2 and work towards delivering new use cases and improved products, we revisited our performance in Year 1 and reflected about the immense potential of growth that lies ahead with everything in place.

We start our new cycle from our learning and are taking a corrective approach. We are backed by a strong community that supports us in the will to make Saitama a top project in the DeFi space.

After evaluating all possibilities, we have decided that creating an upgraded version of the Saitama token will facilitate this journey and benefit our holders in many ways.

We are here to tell you how the Saitama token will be smoothly migrated to V2, opening new opportunities and empowering us in several aspects where we are currently limited by our existing contract.

Our Objective With V2

To upgrade the
Saitama project
making it
stronger and
more sustainable
for the road
ahead.

Our Agenda

- /01** Why is V2 beneficial?
- /02** Proposed Tokenomics
- /03** Circulating Supply
- /04** Support For Holders
- /05** Migration Plan
- /06** Next Steps
- /07** Q&A
- /08** Ecosystem Recap

Why is V2 beneficial?

- Added Security
- Fit to Face the Future
- Sustainable Business
- CEX Friendly
- Hotter Burn
- Meme No More

Added Security

Control of Liquidity

Currently, the Saitama liquidity has been locked by the original deployer. While this prevents liquidity from being drained for any ill intent, it also prevents liquidity to be moved for business purposes.

A V2 would allow us to migrate some of the liquidity to SaitaMask and allow for larger trades to take place.

To date, liquidity on SaitaMask has been funded personally by our Developers.

Multi-Signature Wallets

Multi-signature wallets (or multi-sig) are crypto wallets that require two or more private keys to sign and send a transaction. When creating a V2, the wallets associated with Saitama development will have multi-sig added security to ensure that any transaction is being executed with the consent of all Developers.

Because our current contract is renounced, we do not have a multi-signature wallet setup.

Fit to Face the Future

Adaptive To Future Use Cases

Saitama's contract was renounced after its initial launch. Renounced contracts lock all functionality and updates cannot be made.

V2 will allow the Developers to incorporate variable features that can be modified and triggered based on how new use cases are incorporated.

As it stands today, even if the community voted to incorporate new use cases no change in the tokenomics could be made.

For example, if we launch a new metaverse P2E game that demands a liquidity pool, with our current V1 we would have to launch a new token to fund this pool. With V2 we will have the flexibility to update the tokenomics to sustain the new pool as necessary.

Sustainable Business

Liquidity & Funding Tax

Saitama's original tokenomics were created during a time when taxing for marketing or to fund the project's needs was not the norm. The DeFi market has since evolved to more robust tokenomics that meet these needs.

Our proposal is to incorporate Liquidity and Funding in our tax while still keeping it far below the current DeFi standards.

The Funding Wallet will help accelerate project goals, product development and brand awareness through new marketing opportunities. It will also allow buybacks when needed.

The Liquidity Wallet will allow us to keep our LP growing and stable, making our entire ecosystem sustainable for the holders.

CEX Friendly Token

Whitelisting Centralized Exchanges

One of the obstacles we face when listing in centralized exchanges is implementing our contract in their system. Due to native functions like burn and reflection, sometimes the CEXs have trouble adapting to our tokenomics or even refuse to list Saitama.

Furthermore, in the V1 contract the holders who want to move tokens in and out of some exchanges need to pay double tax because of the tokenomics in place and, currently, we are unable to rectify this situation.

The V2 contract will allow us to whitelist centralized exchanges, thus bypassing Saitama tokenomics for transactions involving CEX wallets, on our end.

Hotter Burn Mechanics

Saitama's current tokenomics are automatically burning supply with every transaction. Approximately 57% of our supply has been burned.

Our hyperburn has been one of our strengths in V1. We want to continue this mechanism as we enter V2, but would like to also resolve the potential issues related to CEXs and token trackers (like CMC).

In Saitama V2, burn tokens will be automatically sent to a multi-sig burn wallet to be manually burned in large increments during pre-announced hyperburn events (SaitaBurn). This will help us update indexes with our marketcap and give us more visibility.

Meme No More

The Wolf Has Matured

Saitama started as a meme token inspired by a popular anime series and was part of the INU dog-themed sub-group. When our team took the lead we decided it was important to distance from the meme category and dropped INU from the face name and logo.

However, the renounced V1 contract is still classified by trackers and exchanges in the meme category and still carries INU in the name. The V2 contract will see INU finally gone for good and will classify Saitama as a utility token, helping us with our objective to become a top project in this space.

Our supply will also be cut from Quadrillions to Billions to align with utility tokens.

New Tokenomics & Supply

Proposed Tokenomics

V2 Tax: 5%

New

Funding Tax: product development, marketing initiatives, media campaigns, exchange listings, buybacks, additional liquidity, additional supply burn, etc.

Liquidity Tax: provides liquidity to SaitaSwap and other products, like our Play 2 Earn games.

Support & Migration Plan

Support For Our Holders

Pre-migration

- Our Development Team will host several 'Ask Me Anything' (AMA) sessions leading up to the migration. These AMAs will take place in multiple platforms including, but not limited to Twitter Spaces, Telegram, and Discord.
- Our Development Team will be available in a live format during the migration process, estimated to take one hour. The platform and format will be announced as we get closer to the date.
- Saitama's Admins and Moderators across platforms will be available to educate and answer questions.

Post-migration

- A dedicated Google Form to report possible issues related to the migration will be created. We will review and address case by case.
- Additional AMAs will be scheduled.
- Saitama's Admins and Moderators across platforms will be available to educate and answer questions.

Migration Steps: Moving Out Of V1

Migration Steps: Moving Into V2

Where are we now?

- V2 Announced
- Deployed and testing on Testnet
- Pre-Launch Audit
- Starting Informative campaign
- Preemptively working with CoinMarketCap and Coingecko
- Preemptively working with all centralized exchanges to ensure that there is no delay for our holders *(they typically require a 24 hour advance notice).*

Next Updates In Line

- Informative Campaign
- New Whitepaper
- New Website
- New Video

Q&A

**Do I risk losing
my Saitama
tokens?**

*No, you will not lose your
Saitama holdings.*

*We will take a snapshot of the
blockchain showing exactly how
much Saitama you held in your
wallet in the moment prior to the
migration and an equivalent
amount of tokens will be
airdropped to your wallet under
the new contract.*

*When we move liquidity from V1
to V2, these new tokens will
show equivalent value in your
wallet.*

When do I see my new tokens?

The V2 tokens will be airdropped to your wallet, meaning they will be automatically sent without your interference.

If you don't see the new tokens after the airdrop automatically, you simply need to add the V2 contract address to your wallet manually and your tokens appear there.

Developers will be live during the migration and the Airdrop times will be informed in our official social media channels.

Do I lose
money with
the supply
cut?

No, our supply will reduce but the new amount of tokens you will hold will have the same value as the tokens you had.

We are cutting the supply from 100 Quadrillion to 100 Billion tokens. This means that if you had 1 Trillion tokens in V1 you will have 1 Million tokens in V2, but they will be worth the same value.

The formula is $[(\text{current amount of tokens}) \times (10^{11}/10^{17})] = \text{new amount of tokens.}$

**Will moving
to V2 cost me
anything?**

No, you will not have to pay anything.

The migration process will be entirely funded by the Saitama Development Team.

You will receive your V2 tokens via airdrop free of charge.

What is the new contract address?

We will announce the Saitama V2 contract address prior to the migration through our official channels: Twitter, Facebook, Instagram, Discord, Telegram and Website.

Please DO NOT trust any other sources and DO NOT buy tokens from contracts claiming to be Saitama V2 before double-checking the new address in our official channels.

How does V2 affect exchange listings?

The new tokenomics for V2 were designed to better suit requirements for listing in exchanges of all sizes.

As for existing listings nothing will change, we will work with each one of them closely for a smooth migration.

How will this migration differ from other failed migrations in the DeFi space?

Our team has been preparing for the possibility of a V2 for several weeks. We have collectively prepared a detailed migration plan. A snapshot of that migration plan and timeline can be previewed in this document.

We have a system in place in which we will airdrop tokens in batches without the need for holders to do anything on their end. This will be done quickly, and the development team is covering all costs to make this process as seamless as possible for our community.

Finally, we have setup a support form to help users who have questions or experience issues.

Have
questions
concerning
V2?

*We have created a form to
receive your questions and will
publish a list of the FAQs with
answers in our website.*

Ecosystem Recap

SaitaChain

Moving to our own blockchain in the future will improve transactions, bring new utilities and reduce tax.

**Fang**

Proprietary NFT platform currently in public Beta testing. Will be integrated to V2 contract.

**SaitaSafe**

A hard wallet with enhanced security features and innovative NFT browser.

**Wolfcaster**

Two Play 2 Earn games in advanced development and 1 more to be announced.

**SaitaPro**

A completely redesigned DeFi Wallet & Decentralized Exchange with multiple features.

**New CEX (TBA)**

We have acquired an important stake in a Centralized Exchange. To be rebranded and announced soon.

**SaitaPay**

We closed a partnership that will allow holders to buy tokens using Credit Cards.

**Edutainment**

Building educational platform that will permeate our ecosystem to make DeFi simple and safe.

SaitaRealty

A token in the Saitama ecosystem bringing a Web 3.0 approach to real world real estate. Now enhanced by Saitama V2 tokenomics.

Thank You
