## **SECURITY UPDATES:**

In light of the recent security issue, we are doing a token swap to deprecate the old \$NFP token and will be airdropping a new \$NFP with a new smart contract:

**Ticker:** \$NFP (unchanged)

**Project Name:** NFPrompt (unchanged)

Smart Contract: bscscan.com/address/0x5518...

security to keep everything airtight.

The contract migration includes redundancies and extra layers of

All \$NFP tokens associated with known hacker addresses are effectively frozen and will not receive the new tokens.  $\times$   $\bigcirc$ 

## Other key points:

- 1. We're migrating the old \$NFP contract to a more secure contract
- 2. Snapshot will be taken at **UTC 3/28 10am**
- 3. NFPrompt will coordinate with CEXes with the conversion from the old \$NFP to the new one, reimbursing new \$NFP tokens to old \$NFP-holding users.
- 4. They will use the current user balance holdings as per the snapshot timing to reimburse affected users.
- 5. They will receive the full amount of token holdings as per the snapshot timing at a 1:1 ratio.
- 6. Users who have old \$NFP tokens with coordinated CEXes will not need to take any action.
- 7. New token will be **airdropped in a 1:1 ratio** for addresses holding old **\$NFP** prior to the snapshot with exclusions:
- a) Tokens traded with hackers are exluded and will not count for the airdrop.
- b) \$NFP tokens bought from DEXs, aggregators, wallets, and other on chain sources after the incident would be excluded.

For exchanges and individual liquidity pool providers, kindly get in touch with us to facilitate token conversion. **We highly encourage Dex LPs to withdraw their LPs ASAP to avoid losses.** 

Stay tuned for further announcements!
