Reality Metaverse Token Swap and Airdrop: Navigating the Transition from RLTM to RMV

Reality Metaverse NFT Follow 2 min read · Dec 13, 2023

5 2

In response to a recent security challenge, we, the Reality Metaverse team, have taken a decisive step: swapping our RLTM token to a new ticker — RMV, following a security breach. This article provides comprehensive information about the swap, the airdrop process, and what it means for holders of our previous token — RLTM.

. . .

Airdrop and Swap

We have completed the new contract's Polygon mapping, which is currently integrated with the Reality Metaverse website. We stayed true to our schedule. The first part of the airdrop was set for Tuesday, November 14, at 11:00 UTC; the airdrop process began as planned and concluded before the expected finish time. You can follow this guide to import RMV tokens to your MetaMask wallet and make them visible: https://twitter.com/Realitymeta/status/1724383907238264989

. . .

Key Token Information

```
Contract Type: ERC 20
Max Supply: 1,000,000,000
Root Contract (ETH): 0x423352f2c6e0e72422b69af03aba259310146d90
Child Contract (MATIC): 0xf0949dd87d2531d665010d6274f06a357669457a
Ticker: RMV
Number of Decimals: 18
Full Token Name: RealityMetaVerse (RMV)
Airdrop Snapshot: Block 49431086
Swap Ratio: 1 RLTM to 1 RMV
```

. . .

The Swap Process

The entire swap aims to restore the situation on the blockchain to its state before the attack. This is feasible due to the ledger's data, which allows for a snapshot of all active wallets holding RLTM during the breach. We are committed to ensuring a fair swap process and addressing any concerns that arise.

Eligibility

The initial airdrop was airdropped to all RLTM token holders who kept their RLTM tokens on the blockchain one block before the security breach. Those with RLTM tokens on centralized exchanges (CEX) can expect the swap to happen in the coming weeks, except the users who kept their tokens on ByBit. Exchanges will conduct their own swaps according to their specific rules. The team will provide updates as each exchange finalizes its swap decision. ByBit users must go through a manual token swap process, which you can read here: https://medium.com/@Realitymeta/hello-reality-metaverse-community-72d4f11bb010. Users may need to withdraw tokens and contact RM customer support for assistance in certain cases.

. . .

Important Considerations

Blocked Deposits: To prevent exploitation, deposits of RLTM tokens on exchanges are currently blocked.

Manual Support: Users who made transactions after Block 49431086 but before the official announcement should contact RM customer support on Telegram or Discord for manual assistance.

Ticket System: Users can create a support ticket on our Discord Server for any issue. The team works hard to respond to all swap-related tickets in a short period of time.

. . .

Listing and Trading

At the moment, the RMV to USDT pair is reintroduced on DEX: https://app.uniswap.org/tokens/polygon/0xf0949dd87d2531d665010d6274f06a357669457a

While specific dates for listing on centralized exchanges are not yet confirmed, the team plans for a potential listing within two weeks.
