| <div>⚙️ Madrid Hackathon</div> <div>2 day hackathon event in Madrid where talented devs create products on Qubic. Event is sponsored by various notable partners. More information on that soon!</div> | × | <div>⚙️ Ambassador Program Season 2</div> <div>Season 2 launch of the Qubican ambassador program aimed to grow the Qubic's ecosystem</div> | × |
| <div>⚙️ Legal entity</div> <div>Qubic aims to incorporate a legal structure so it can pursue formal partnerships</div> | × | <div>⚙️ Redefined Developer Docs</div> <div>Publish enhanced technical documentation and comprehensive starter kits</div> | × |
| <div>⚙️ Qubic Clang Port</div> <div>Migrating to Linux and allow the UEFI builds there instead of just the Windows platform.</div> | × | <div>⚙️ Qatum Protocol</div> <div>In the Qubic network, each pool is required to have its own miner and protocol, which creates significant challenges for both cryptocurrency miner makers and pool operators. Typically, miner markers do not operate their own pools, and pool operators are</div> | × |
| <div>⚙️ Wallet Connect</div> | × | | |

Various wallet integrations that help onboard more devs and users into the Qubic ecosystem

⚙️ **Metamask Snap** ×

Various wallet integrations that help onboard more devs and users into the Qubic ecosystem

⚙️ **Custom Mining POC** ×

Mining Monero on Qubic

⚙️ **Python SDK** ×

Allows users to write Python apps to communicate with RPC endpoint.

⚙️ **Qubic Elastic Search** ×

QDashboard is a gold mine which serves a strategic purpose :
For investors and the community: it enables in-depth analysis, offering greater transparency and insights.
For marketing teams: it helps evaluate what works (or doesn't) and refine strategies to maximize effectiveness.

⚙️ **2TB Computers** ×

Computers are now packed with 2 TBs of RAM further increasing network power.

not typically equipped to create their own miners.

⚙️ **2.0 RPC Architecture revamp** ×

Updates to better support better long term archives and other functions.

⚙️ **Onyze** ×

Custodial/Wallet features
Key Features:
Wallet Management System: Users can create wallets, sign transactions, and interact with Qubic seamlessly.
Regulated Custodian: Onyze provides secure custodial solutions for digital assets, targeting institutions requiring compliance.
Asset Tokenization: As the only regulated entity in Spain, Onyze can lead tokenized asset issuances.

⚙️ **Public Test Net** ×

We're aiming to deploy our test net

⚙️ **Multi Sign SC (MSVAULT)** ×

Aim to launch a multi sign vault that creates an additional layer of securing your Qubics

⚙️ **Qubic Academy** ×

Qubic is launching it's own academy to educate both developers and investors that are curious about Qubic

 Consensus  Consensus event in Toronto 2025	 Ledger Integration  Allowing users to keep their Qubic on Ledger
 ETF/ETP  Appear an ETP.	 Rust SDK  SDK used to write Rust apps against RPC endpoint.
 Vottun Bridge  Bridge for swapping to/from Arbitum network	 Expand Ecosystem Funds for New Projects  Expand Ecosystem Funds for new projects
 Nostromo Launchpad  Launchpad for projects on Qubic, supports staking of more Qubic.	 Redefined Developer Docs  Publish enhanced technical documentation and comprehensive starter kits
 Q2 Proposal Cycle for Ecosystem  Continue fielding and vetting proposals in Q2.	 Expand Team  Grow head count and add more talent.
 Docker Test Node  Docker test node allows devs to run mini test net	 Dapp in-app browser in mobile wallet  Build-in browser in the Qubic mobile wallet
 Light/Relay Nodes  To run on Linux for better adoption	 External Indexers  Makes all the onchain things like transactions/balances/contract_state easy to retrieve via an online REST/GraphQL API.
 Qubic Name Service.  Decentralized name service on the Qubic network to provide human-readable addresses for Qubic wallets and resources.	 Qubic SC API Generator  Tool to automatically generate SC API documentation and access services
 Tier 1 Exchange Listing  We aim to list Qubic on 2 different Tier 1 exchanges. Q2 and Q4	

3rd Quarter July 1 – September 30

Q3 Proposal Cycle for Ecosystem

Continue fielding and vetting proposals in Q2.

Reduce Tick Time to 2 seconds

Enhancing overall network performance

Financial Reports

More in depth reports about Qubics ecosystem financial performance

Refine Incubation Fund

Grow incubator program to allow more builders to build on Qubic

EP 175 Halving

Proposal for Qubics yearly halving event

Qubic Wiki

Wiki/FAQ to help answer community questions efficiently.

QFront CLI Frontend

Graphical front-end making CLI use easy for novice users

Typescript Library

Typescript library for dapp development.

Qubex

A community-driven platform that facilitates asset trading and token exchange within the Qubic ecosystem

Qx Info

Enhanced UI resembling traditional exchanges (e.g., Binance, MEXC)
Wallet integration (e.g., Metamask snap)
Real-time price charts and classical orderbook display
Notifications for market changes and transactions
Advanced error handling and security measures
Comprehensive asset data and market analysis tools

Oracle Platform

Adding new oracle capabilities

Automated SC Validation

To ensure SC quality, qubic will provide an automated SC validation tool to

verify if your SC complies with the rules and guidelines

4th Quarter

October 1 – December 31

×

- ⚙

Security Audit

×
- Continue fielding and vetting proposals in Q2.
- ⚙

Qubic SC IDE

×
- Tool to help to develop and debug SC's
- ⚙

Q4 Proposal Cycle for Ecosystem

×
- Continue fielding and vetting proposals in Q2.
- ⚙

Subchain for Events

×
- Used to offload certain processes from our main chain and improve efficiency.
- ⚙

Tick Rollbacks

×
- Allow the network to recover it self from a blocking situation by enabling a tick rollback to the latest tick which is known as successful
- ⚙

Tier 1 Exchange Listing

×
- We aim to list Qubic on 2 different Tier 1 exchanges. Q2 and Q4

This roadmap is a dynamic document and is subject to change. Additional descriptions, updates, and new milestones will be added over time as the Qubic ecosystem evolves.
