🦑SquidGrow Migration Update 🦑

Migration Conclusion + Bonus Carrots

We are now moments from going LIVE with trading resumed on BSC and ETH!

BSC: 0xd8Fa690304D2B2824D918C0c7376e2823704557A
ETH: 0xd8Fa690304D2B2824D918C0c7376e2823704557A

**There are no other contract addresses for SquidGrow*
**Make sure you add these above contracts to your TrustWallet, Metamask, etc so that they display*

The process for migration has been an extensive one on the team's end - Airdropping nearly 20k holders, doing extra due diligence to ensure all amounts were correct after factoring in staking rewards/tax, and working with Gotbit and exchanges throughout the process.

Liquidity/Market Cap: 🥕
Liquidity has been adjusted through our S.A.M. contracts to be equal on both ETH and BSC. This will allow for healthier growth, as they were getting slightly too thick of ratios on both charts and imbalanced. This seamless process has allowed our marketcap to move higher, as shown on both DEX and CEX currently.

Transfer Tax: 🥕
ALL TRANSFER TAX WILL BE REMOVED AND SET TO 0%

New Tokenomics:
Buy Tax - 4%
Sell Tax - 8%
Transfer Tax - 0%

Transaction Records:

The transactions where Shibtoshi and the Dev team made this happen are here for those who were trying to follow along.

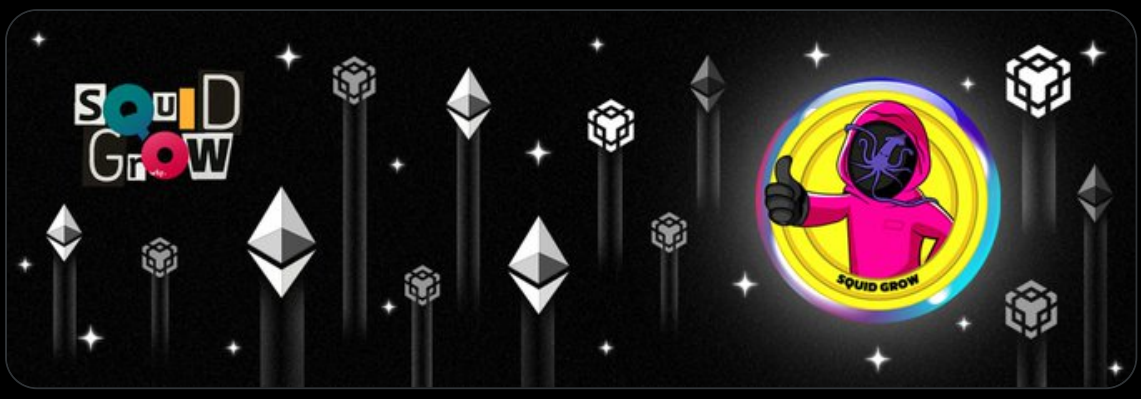

Initial pull of liquidity from eth pair for rebalancing, 199ETH ($328k):
etherscan.io/tx/0xf616ff947...

Re-adding $206k to the ETH pair:
etherscan.io/tx/0x104568ee5...

Add 505k liquidity into BSC LP pool:
bscscan.com/tx/0xf97feee13...

In conclusion, 122K in value was pulled from the ETH liquidity and added to BSC to balance the two pools.
