Sphynx has evolved much more than the original concept of being a Decentralized Exchanged (DEX), where investors can easily swap from one token to another. Instead, they grew into a Launchpad and Staking/Farming Platform for Projects launching on the Binance Smart Chain (BSC) and Ethereum blockchain (ERC-20) and being the first DEX to have a Stop-Loss and Stop-Limit for traders.

But the biggest news did not come until late February when Sphynx Labs announced its partnership with the fastest and lowest transaction cost, Bitgert. Sphynx will be the first

and main swap for Bitgert by providing services like the launchpad, staking and farming platform, and so many more innovative utilities on the Brise Network (BRC20).

Similar to how Trader Joe is now the main swap for Avalanche or Uniswap for Ethereum, Sphynx will be the main platform for BRC-20 users to trade, invest, and launch.

Sphynx Labs is introducing a new wave of utilities by relaunching the BSC. The rebrand of the token will include:

The Sphynx Bridge: The bridge will focus on Alt and Stable Coins by connecting the BRC-BSC-ERC, making it easier for investors to go from one network to another. Holders of the Sphynx ERC-20 NFTs "Genesis" will receive passive income from the fees generated by the Ether Bridge.

New Marketing Team: The new team will bring a fresh perspective and ideas to propel Sphynx further than ever before. The marketing team will look for opportunities by analyzing marketing activities, tracking the results, and implementing the data collection.

Wallet and Mobile Application: A wallet like no other. Designed from the ground up to make the Defi experience as painless as possible, offering a CEX like experience in a DEX setting.

Sphynx Pay: Real-world purchases made with Sphynx tokens. Details to come as development continues.

SPHYNX BSC Staking: Allowing investors to earn passive income with high APRs. Investors will be locking their tokens for a set amount of time and pledging not to withdraw them, or the interest generated will be deducted. The locked up period will be:

- 3-day auto pool
- 60-day auto pool
- 180-day auto pool

SPHYNX BSC Farming: Sphynx will provide four pools for investors to enjoy with high APRs and high Multipliers. The pairings Sphynx Labs will offer are:

- BNB/SPHYNX
- BNB/BUS
- BNB/USDC
- BNB/USDT

NFT Staking: Investors can stake their Sphynx BSC NFTs "Scion" to earn Sphynx tokens while also being eligible to be in the presales for projects launching on the Sphynxpad. To

mint the Scion, click on this link: https://sovereignsphynxcouncil.co.

CEX listings: Sphynx Labs will be listed on Centralize Exchanges to grow the project further and attract more investors outside of the Defi world.

New Partnerships: Special IDOs and collaborative relationships will develop over time to grow our community and offer unique opportunities to investors.

Sphynx Labs is positioning itself beautifully to be the leader in the crypto space.
