

# Tokenomics

## The tokenomics for NPC are simple and intuitive.

On July 29, 2023, the total human population was recorded on-chain.

*The total supply is* **8,050,126,520.**

It is the combined total of both NPC (erc20) and NPCMFT (erc1155) in circulation.

## More info

- **Fair launch. Everything is on the market.** 99% of all NPC tokens have been sent to the Uniswap liquidity pool. The remaining 1% of the supply was added to NFT marketplaces.
- **Locked and renounced.** LP tokens were locked (until the year 6969) for future civilizations. The contract is renounced.
- **Zero transaction tax.** As every NPC knows, the only taxes you should be paying are to your government.
- **No utility.** No promises of BS utility or intrinsic value. This is purely a memecoin for every human on Earth
- **Multichain.** NPC trades on Ethereum, Solana, and Base.

## How to Trade NPC

### On Ethereum:
