

Paysenger at a glance

Paysenger is a revolutionary collaboration platform for content creators, fans, and brands, bringing together the best tools for content monetization and audience engagement. Paysenger uses state-of-the-art technology as well as proprietary AI developed in collaboration with Sureel.io led by Dr. Tamay Aykut (Ph.D. in Ai) previously v.a. Prof @ Stanford.

On the platform, users can send authors paid requests for exclusive content, tips, or expert opinions as well as consume paid content on a subscription basis. Paysenger expands the paid creator audience by allowing users to support creators and commission their content with EGO tokens that can be earned by completing tasks on the platform.

Paysenger also allows idea creators (such as sponsors and brands) to collaborate with creators, leading to the creation of new content and bringing ideas to life. Fans get to support creators, communicate with them, and interact directly.

In turn, users can co-create content with creators and earn income from monetizing it. In addition, the platform can be used to find experts in various fields and book private consultations with them. Collaborate to bring your ideas to life and create a steady source of income by working with others in the ecosystem.

Many artists find AI tools unethical because they often use datasets containing artwork taken from the Internet without permission. This can lead to visible watermarks or signatures. In addition, AI art can undermine the skills of human artists and use their labor for profit when selling generative art.

Paysenger is developing a personalized AI model, an exclusive, artist-specific AI model that learns and generates art in the creator's unique style.

Paysenger aims to bridge the gap between Web2 and Web3 by creating the ideal environment for the mass adoption of blockchain technologies. The project is being developed by an experienced team and supported by major blockchain platforms such as Polygon and ConsenSys. Brands have a huge demand for user-generated content (UGC), and Paysenger will help meet this need. Leading blockchain networks are competing to attract new active wallets, and having an active user base is a key indicator of blockchain network health. Paysenger is ready to help its partners attract a significant number of new users, thereby increasing the popularity of the web3 network.

Paysenger also enables idea-makers (such as sponsors and brands) to collaborate with creators, resulting in the creation of new content and bringing ideas to life. Fans gain the opportunity to support creators, communicate with them, and engage directly.

In return, users can co-create content with creators and earn revenue from its monetization. Moreover, the platform can be used to find experts in various fields and book private consultations with them. Collaborate to bring your ideas to life and create a stable source of income by working with others in the ecosystem.

Brands have a huge demand for user-generated content (UGC), and Paysenger will help meet this need. Leading blockchain networks compete to attract new active wallets, and having an active user base is a key indicator of the blockchain network's health. Paysenger is poised to assist its partners in attracting a significant number of new users, thus increasing web3 traction.
