TOKENOMICS EXPLAINED

1. LP Pools supported
2. Rewards tax
3. Marketing
4. Game development

1. 1% frm every buy and sell of \$BITZ token goes straight back to the LP pools. That's rights "Pools", we have dual LP pools completely unique to the space. This allows for more stable price action & a dynamic price structure.
2. 3% will go to our rewards pool. This will be swapped out from native tokens to ETH. That's right. We pay all our rewards out in ETH unlike every other token out there. Making sure our chart is supported alongside the investor.
3. Been able to push our marketing agenda and let the world know what we are building, all without dumping our chart. Having key connections in the youtube & x space supports a dynamic and fluid marketing agenda.
4. We have already been in deep talks with a big top tier gaming development company allowing for a further expansion of Marbitz. Our own game will be coming as we scale the token and grow our community.

OUR DAPP

The hub of our project, Built from the ground up with every line of code done with our development team means you are getting a top end product for your investment
