HODL TOKEN RELAUNCH: A NEW ERA OF SECURITY AND REWARDS

SHARE:

As we gear up for the relaunch of $HODL, we are excited to share the details that set this iteration apart. With improved tokenomics, enhanced security, and a focus on community-driven sustainability, the $HODL token is designed to be the ultimate solution for earning while you hold.

TOKENOMICS

The new $HODL contract has a fixed supply of 10 billion tokens, carefully allocated to maximize rewards and sustain long-term growth:

- **6 billion tokens** will be airdropped to existing holders to restore their positions.
- **1 billion tokens** are allocated for the reward pool to ensure steady payouts.
- **1.5 billion tokens** are reserved for the Treasury, supporting CEX listings, marketing, development, and liquidity provision.
- **1 billion tokens** will be used to seed the PancakeSwap liquidity pool for smooth trading.
- **500 million tokens** are dedicated to market-making efforts.

To ensure fairness, project-managed tokens will be excluded from reward calculations, ensuring holders receive consistent percentages of the reward pool as they did previously.

MARKET CAP AND LIQUIDITY

The relaunch prioritizes liquidity and market stability, with a clear and transparent strategy:

- **Market Cap at Launch:** $2,000,000
- **Token Price:** ~$0.0002 per $HODL
- **Liquidity at Launch:** 165 BNB, with an additional 140 BNB added post-launch, maintaining a 10% liquidity-to-market-cap ratio.

To protect investor confidence, all liquidity will be locked after launch.

TRANSACTION TAXES

The $HODL token uses a tax system designed to support the reward pool and protect holders from harmful market practices:

- **Buys and Transfers:** 5% tax directed entirely to the reward pool.
- **Sells:** 15% tax during the launch period, gradually reducing to 5% over the first 2-3 weeks to prevent early price manipulation.

MAX SELL LIMITS

To ensure price stability and protect against large-scale dumps:

- **Launch Limit:** 0.25% of total supply per wallet per day.
- **Post-Launch Limit:** 0.5% of total supply per wallet per day.

SECURITY AT THE CORE

The $HODL contract places security as its highest priority. Features include:

- Multi-signature wallets requiring multiple owners to approve contract updates.
- Private keys generated offline in air-gapped hardware wallets to reduce vulnerability.
- A planned Cyberscope contract audit to ensure the highest standards of safety.
- Exploration of insurance options to add another layer of protection for investors.

WHY CHOOSE $HODL?

$HODL is more than just a token—it's a vision for sustainable crypto rewards. With a focus on innovation, community trust, and resilience, the $HODL token is built for holders who want to earn while participating in a secure, growing ecosystem.

The future of $HODL is bright, and we are thrilled to have you with us on this journey. Stay tuned for more updates as we move closer to launch.
