[ANN] LumiWave: Lighting the Path to Web3

LumiWave Follow 4 min read · Apr 26, 2024

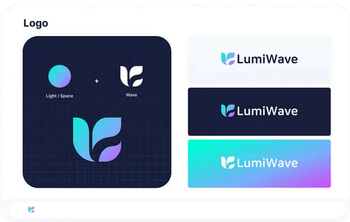

Hello, Surfies those riding the LumiWave!
Today, we're excited to give you a sneak peek at LumiWave and Migration.

About LumiWave

LumiWave is an innovative project that applies the principles of light and water to the combination of content and blockchain, bringing a new dimension to Web3 experiences.

The new token name, LumiWave (LWA), is inspired by water, the motif of the Sui mainnet, which has changed with this migration. LumiWave represents our desire and intention to bring unprecedented speed and efficiency to our users by enabling transaction processing that is as fluid and lightning-fast as the flow of water.

Vision

Light

- A journey of innovation and knowledge: Like light traveling through the universe, LumiWave spreads knowledge and innovation within the gaming industry. We use blockchain to make games more transparent and trustworthy.

Wave

- The element of connection and flow: Like the properties of water that enable the creation and transformation of the universe, LumiWave creates a fluid connection between game IP and users. It enriches the user's experience with the infinite flow of the game world.

Space

Infinite possibilities and exploration: Like the boundless exploration of the universe, LumiWave breaks new ground by bringing game IP to the blockchain. It is a journey to explore the infinite value and scalability of game assets.

Catchphrase:

Path by light, Surf by wave. Explore the Web 3.0 world with LumiWave.

Goals

Interaction

- Community-driven growth: Just as stars influence each other's gravitational pull, LumiWave aims to be a community-driven platform where users are directly involved in game development and share the value that comes from the process.

Sustainability

- A foundation for long-term prosperity: Just as the universe balances itself, LumiWave seeks long-term prosperity by building a sustainable game economy.

ONBUFF>LumiWave Migration

How to Migrate

LumiWave intends to provide a migration service to exchange ONBUFF (ONIT) to LumiWave (LWA) via the INNO platform and the exchanges.

(1) Migration from the INNO Platform

Through its platform, INNO platform, LumiWave plans to offer a migration service to convert existing Ethereum-based tokens, ONBUFF (ONIT), to LumiWave (LWA), an asset on the Sui Mainnet, at a 1:1 ratio.

(1–1) How to migrate from the INNO Platform

1. Click the Migration Page link.
2. Log in with INNO Platform ID
3. The wallet that is connected to the INNO ID will be displayed.
   a. If it is not displayed, please connect your wallet to the INNO Platform.
4. After connecting your wallet, your ONIT will be reflected; double-check it and click "Apply".
5. Verify yourself with KYC.
6. After paying for the gas fee due to the migration, click confirm.

(1–2) Caution

ONIT is based on the Ethereum Mainnet and supports 18 decimal digits (0.000000000000000001), but LumiWave (LWA), which will be migrated, uses the Sui Mainnet and only supports up to 9 decimal digits (0.000000001). Normally, we don't recommend migrating for users with small amounts of 9 decimal places or less, due to the gas fee involved, but we will systematically round up to 10 decimal places and provide the service.

(2) Migration from exchanges

We are currently in the process of negotiating with exchanges that allow ONBUFF (ONIT) to trade to migrate ONIT to LumiWave (LWA). More information will be provided in the future.

Migration timeline

The ONBUFF (ONIT) to LumiWave (LWA) migration is expected to take place on May 20th.

Token Supply

The total supply of LumiWave (LWA) will be set at 770,075,466 tokens, the same as ONIT.

FAQs

More information about the migration from ONBUFF to LumiWave will be released in the Tips & Guide section of the INNO platform in the future.
