We completed the token swap of the BORA token (ERC-20) into the new BORA token (KCT, Klaytn Compatible Token) along with the Mainnet migration from Ethereum to Klaytn.

From now, only Klaytn-based BORA tokens (KCT) can be traded on the exchange (Upbit, Bithumb, or Coinone).

Your wallet address is newly changed due to the abovementioned Mainnet migration. please do not send your new BORA tokens (KCT) to old Ethereum (ERC-20) wallet address! Your BORA tokens you tried to send can be lost and cannot be recovered

Ethereum network-based BORA token (ERC-20) can no longer be transferred. Please do not attempt to transfer Ethereum network-based BORA tokens (ERC-20)! Your BORA tokens you tried to send can be lost and cannot be recovered.

In BORAECOSYSTEM, to commemorate the Mainnet migration, we are running a free event as follows.

Event Details: Free withdrawal fee during the event period

Event period: November 1, 2021 01:00 UTC ~ November 7, 2021 01:00 UTC

For those who have not yet completed the token swap, we are operating changebora.boraecosystem.com. Here you can directly proceed with the token swap through the owner verification process.

For other inquiries related to token swap, please contact the representative email below.
