TRUST Demand Drivers

Demand Driver	Description
Data Creation	Users must stake $TRUST tokens to create new data entries (claims and identities) within the knowledge graph. As more users participate in the network and contribute valuable data, the demand for $TRUST tokens increases.
Gas Token	Use TRUST to pay for Intuition Network gas fees.
Network Securing	Users bond TRUST to secure the Intuition Network.
Node Operation	Users bond TRUST to run Intuition nodes that index and serve the Intuition knowledge graph.
Speculation	Users speculate on data using TRUST.
Token Buybacks	Protocol directly purchases tokens with profits made.
TRUST Bonding	Users bond TRUST to gain eligibility for protocol emissions, voting rights, and other rewards.
