

SLIMEX (\$SLX)

Web2 Scale. Web3 Ownership. One SlimeX, Across Chains.

As of October 2025

1. What is SLIMEX?

SLIMEX (SLX) is a next-generation gaming platform built to power sustainable and interoperable Web3 gaming experiences. It serves as the **core utility token of Slime Miner** — a flagship Web3 idle-mining RPG that bridges the scale of Web2 with the ownership and rewards of Web3.

At its core, *Slime Miner* demonstrates how SLX enables a balanced and enduring in-game economy. Within just six months of launch, the game attracted **over 22 million users** and approximately **150,000 daily active players (DAU)** by focusing on fun, progression, and fair competition — with tokens and NFTs integrated to **enhance**, not replace, the gameplay experience.

Players build a team of cheerful slimes, mine resources, and grow stronger as they dig deeper, competing on seasonal leaderboards while unlocking slime races, guild wars, and special events. Designed for fun yet rewarding play sessions, the game combines optimized idle mechanics with long-term progression — through prestige, upgrades, and compounding boosts — ensuring that every run feels more powerful than the last.

Launched within **LINE's Kaia ecosystem** and expanded cross-platform across mobile and web, *Slime Miner* delivers **Web2 accessibility** alongside **optional Web3 ownership and rewards**. Strategic partnerships with **YGG** (community quests and player growth) and **Immutable** (asset tooling and marketplace infrastructure) further strengthen the ecosystem — supporting seasonal airdrops, fair competition, and performance-based rewards that drive long-term engagement and value.

2. What makes SLIMEX Unique?

Seasonal Airdrop Economy: Performance-based airdrops tied to a federated server model. Each new server runs a fresh, self-contained season so new players can compete on fair terms while veterans chase new leaderboards.

Slime Natural Staking (SNS): A payback loop that returns a portion of in-game spend in SLX—no lockups or technical hurdles—aligning player engagement with long-term retention.

Portable & Scarce NFTs: Profile and Gold NFTs are minted once, enhance gameplay across servers, and are designed for cross-title utility as the Slime IP expands.

Multi-Chain by Design: Interoperability across Kaia, TON, BNB (with routes to Solana) improves asset mobility and access to broader liquidity.

3. How \$SLX is used?

- **In-Game Utility:** Unlocks seasonal rewards, boosts, upgrades, and event entries.
 - **Rewards & Airdrops:** Distributed based on seasonal performance; supports SNS payback mechanics.
 - **IP Expansion:** Serves as the economic backbone for future Slime titles, merchandise, and partner activations across the “Slimeverse.”
-

4. Token Model

\$SLX is fixed to 10 Billion with deflationary design mechanisms planned to reduce effective circulating supply over time. The Economy Design consists of [Seasonal resets + performance rewards target sustainability beyond a typical post-TGE spike/decline].

5. Why It Matters?

Web3 gaming often collapses after TGE due to weak utility and speculation. Slime Miner flips the script with content-first gameplay, seasonal fairness, and ownership as a bonus—not a burden. With proven global adoption and a clear cross-chain roadmap, \$SLX aims to power a growing entertainment IP where Web2 scale meets Web3 ownership.

Beyond its role as a utility token, **SLIMEX** is envisioned as the connective tissue of the **SlimeX Network** — an upcoming **L2 App-Chain** aligned with ecosystems like **BNB** and **Kaia**, designed to deliver predictable, low-cost blockspace for games, creators, and brands. It supports a **dual-plane architecture** (Play Plane + Asset Plane) and a **user-first UX** through account abstraction and sponsored gas, enabling Web2-style logins (LINE, Google, Apple) while keeping full Web3 ownership beneath the surface.
