ABSTRACT

Metaverse connects metaverse with infrastructures powered by our token. Connecting these bridges happens through the game we develop, the stake platform we code, and the Nft Marketplace. BRN Metaverse is a technology and token project that offers innovations in the fields of Metaverse, Web 3, GameNFT & GameFI, produced on Binance Smart Chain by an idealistic and powerful team.

What is Metaverse ?

Metaverse is a hypothetical iteration of the Internet, supporting persistent online 3D virtual environments through traditional personal computers as well as virtual and augmented reality devices. Metaverse enables human cognition to be included in an artificial physical environment through computers, android, devices, and 3D devices. From the communication perspective, Metaverse offers a new world of meaning and cooperation opportunities; providing infrastructure and interaction opportunities for cultural, intellectual and economic production; It is possible to define it as a cyber-social platform in which different development technologies are used simultaneously and in an integrated manner.

What is Game-Fi ?

Game-Fi, which has recently attracted the attention of the game audience and entered the crypto money ecosystem as a novelty, is called the system where you can earn money by fulfilling the conditions created in any structure within the game.

Metaverse

What is GameNFT ?

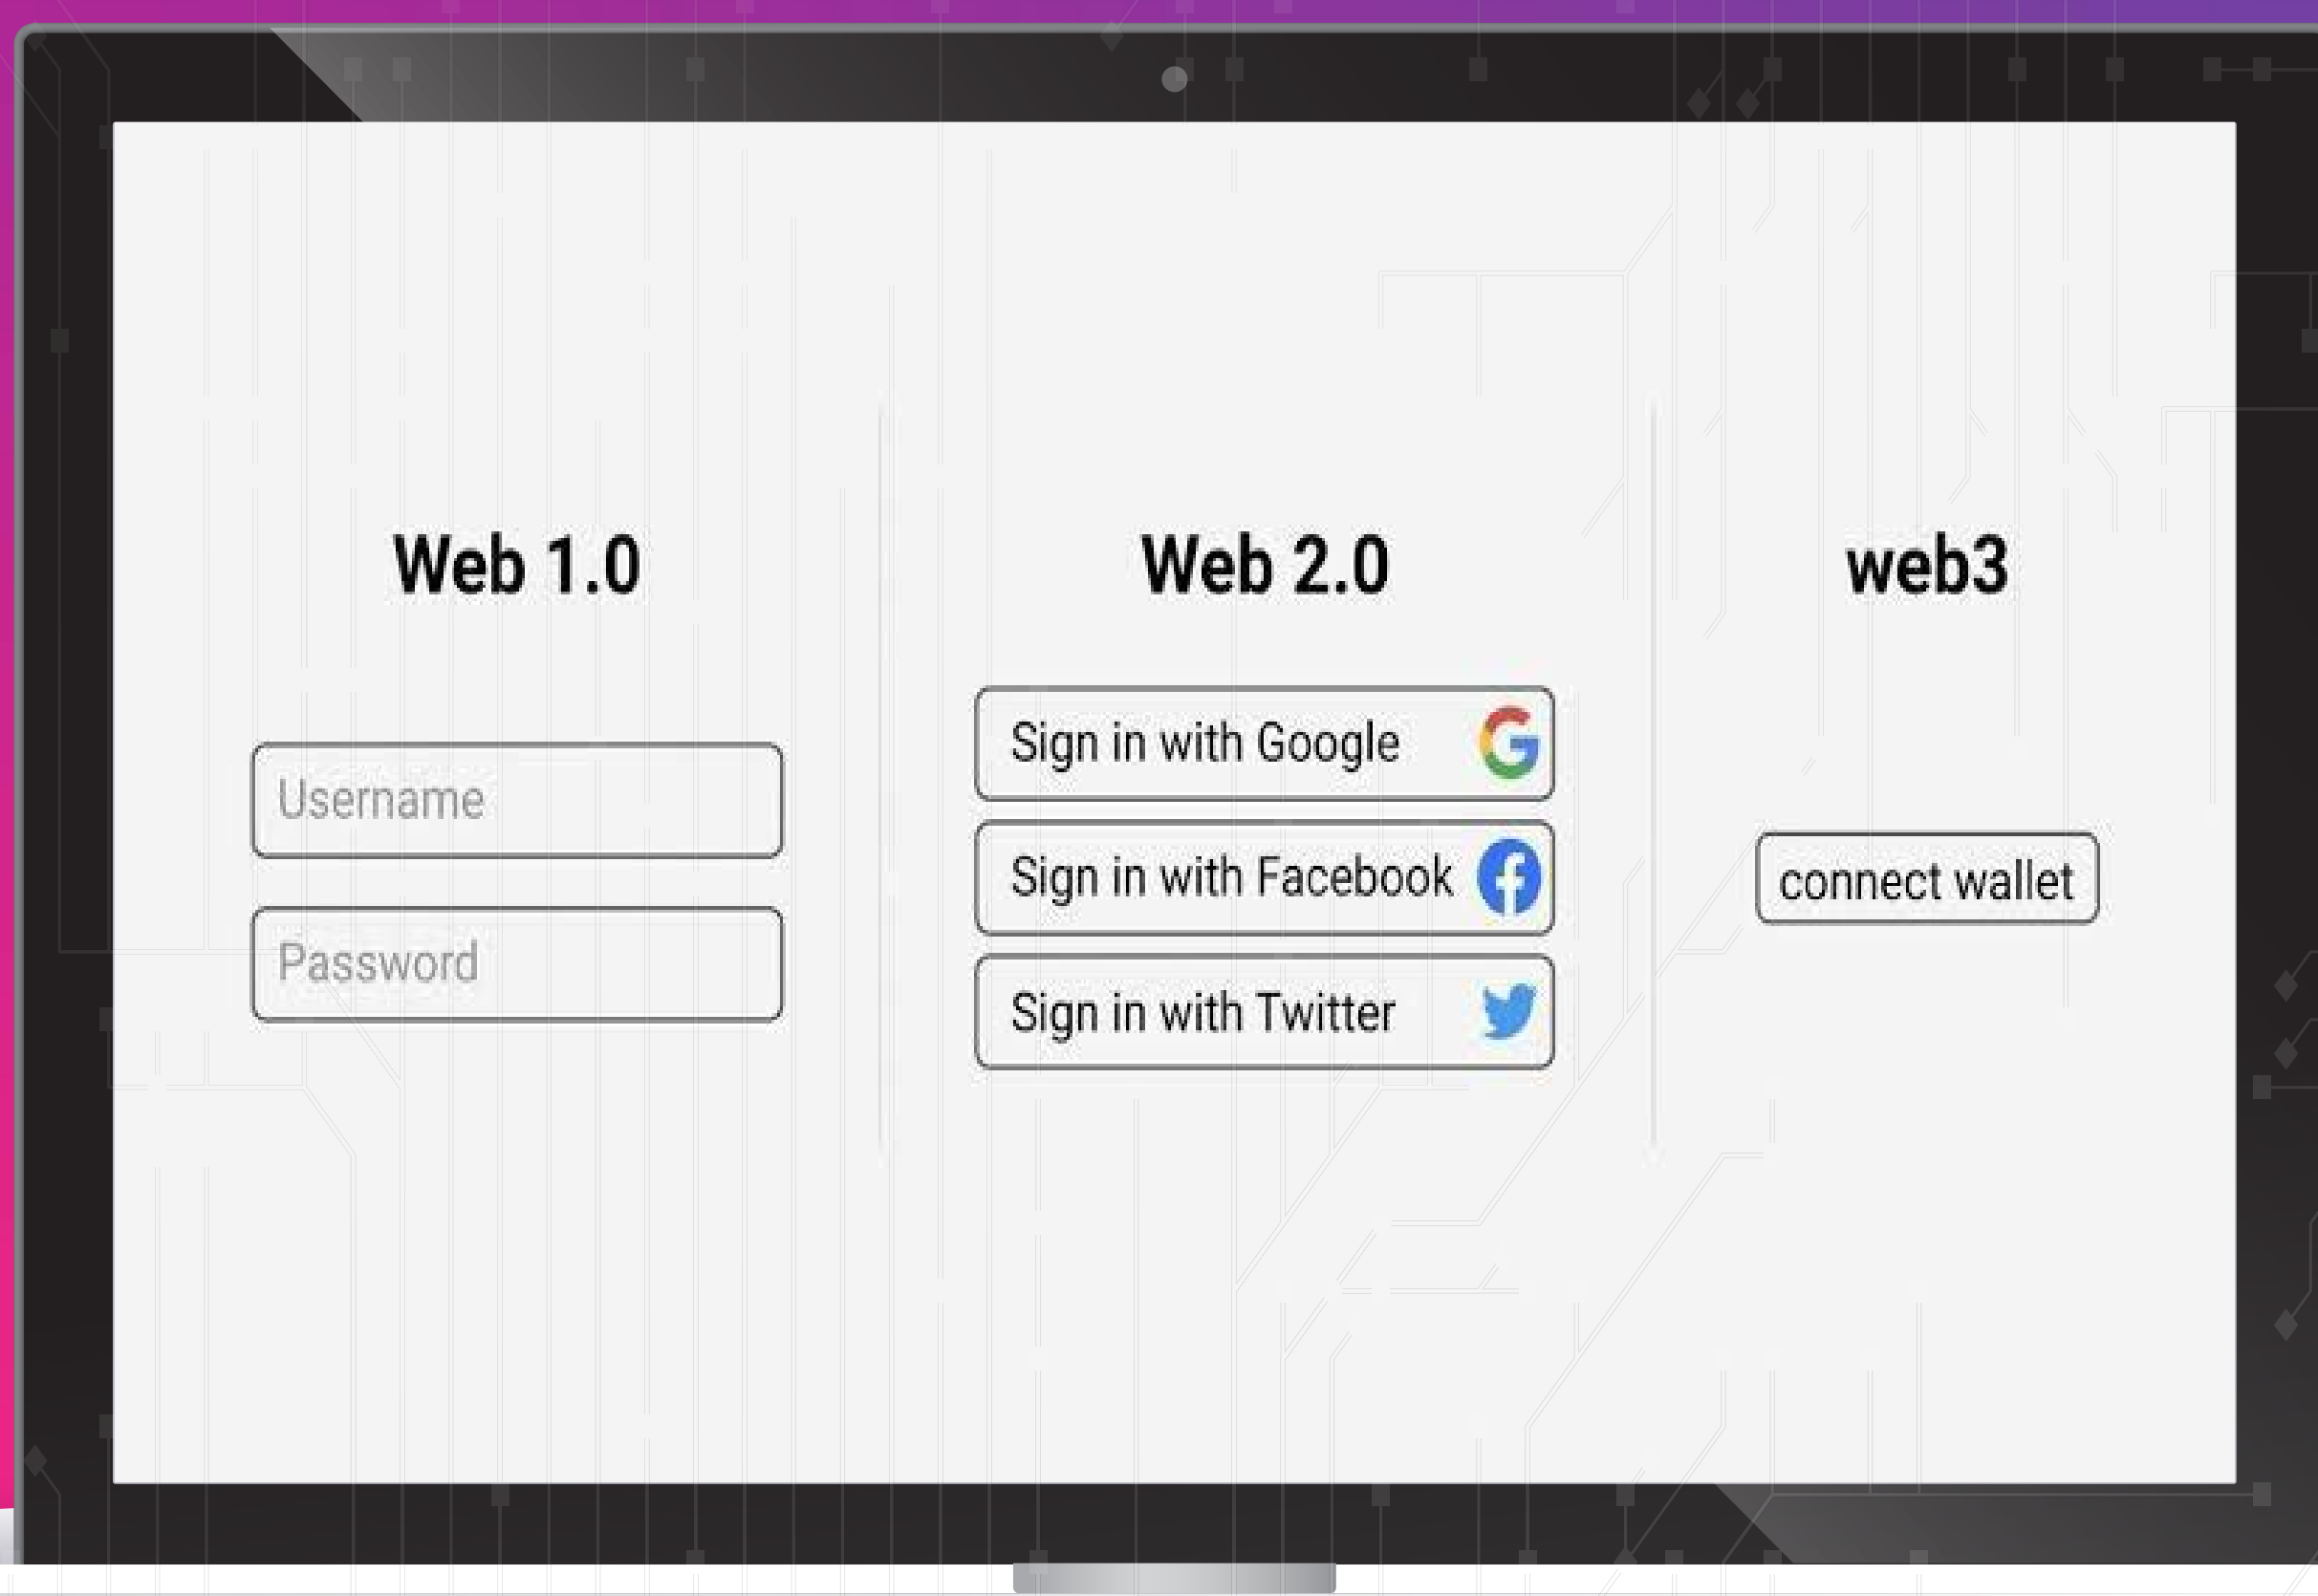

The ecosystem that emerges from adding NFTs to the game is called GameNFT.

The only obvious difference from normal NFTs is that it provides you with extra features in the game. You can buy and sell GameNFTs just as you would buy and sell regular NFTs. It can be described as a further development of NFTs.

WHAT IS WEB 3.0 ?

Web 3.0 is the greatest development ever experienced in the internet age. To understand Web3 well, we will briefly talk about Web 1.0 and Web 2.0. In the Web 1.0 era, we had to create a username and password when logging into any application, game, or internet browser. We used different passwords for each application or game and took notes. When Web 2.0 came, it became a bit more advanced, and we could directly sign up or log into our Gmail, Facebook, or other social media accounts. In Web 3.0, a new era begins where we can log in using our completely decentralized wallets.

While logging into the shopping site, application, or game we want, we can log in with the Connect Wallet system, we keep our data ourselves, and any company or founders do not store our personal information. Because the management and control are entirely in our hands, it provides a freer and safer infrastructure.

While shopping, you can make your payment quickly and securely, whether in the application, in the game, or if you have the desired crypto asset, you can store your application in the wallet and protect your assets

BRN METaverse

GOLDEN KEY OF THE METaverse

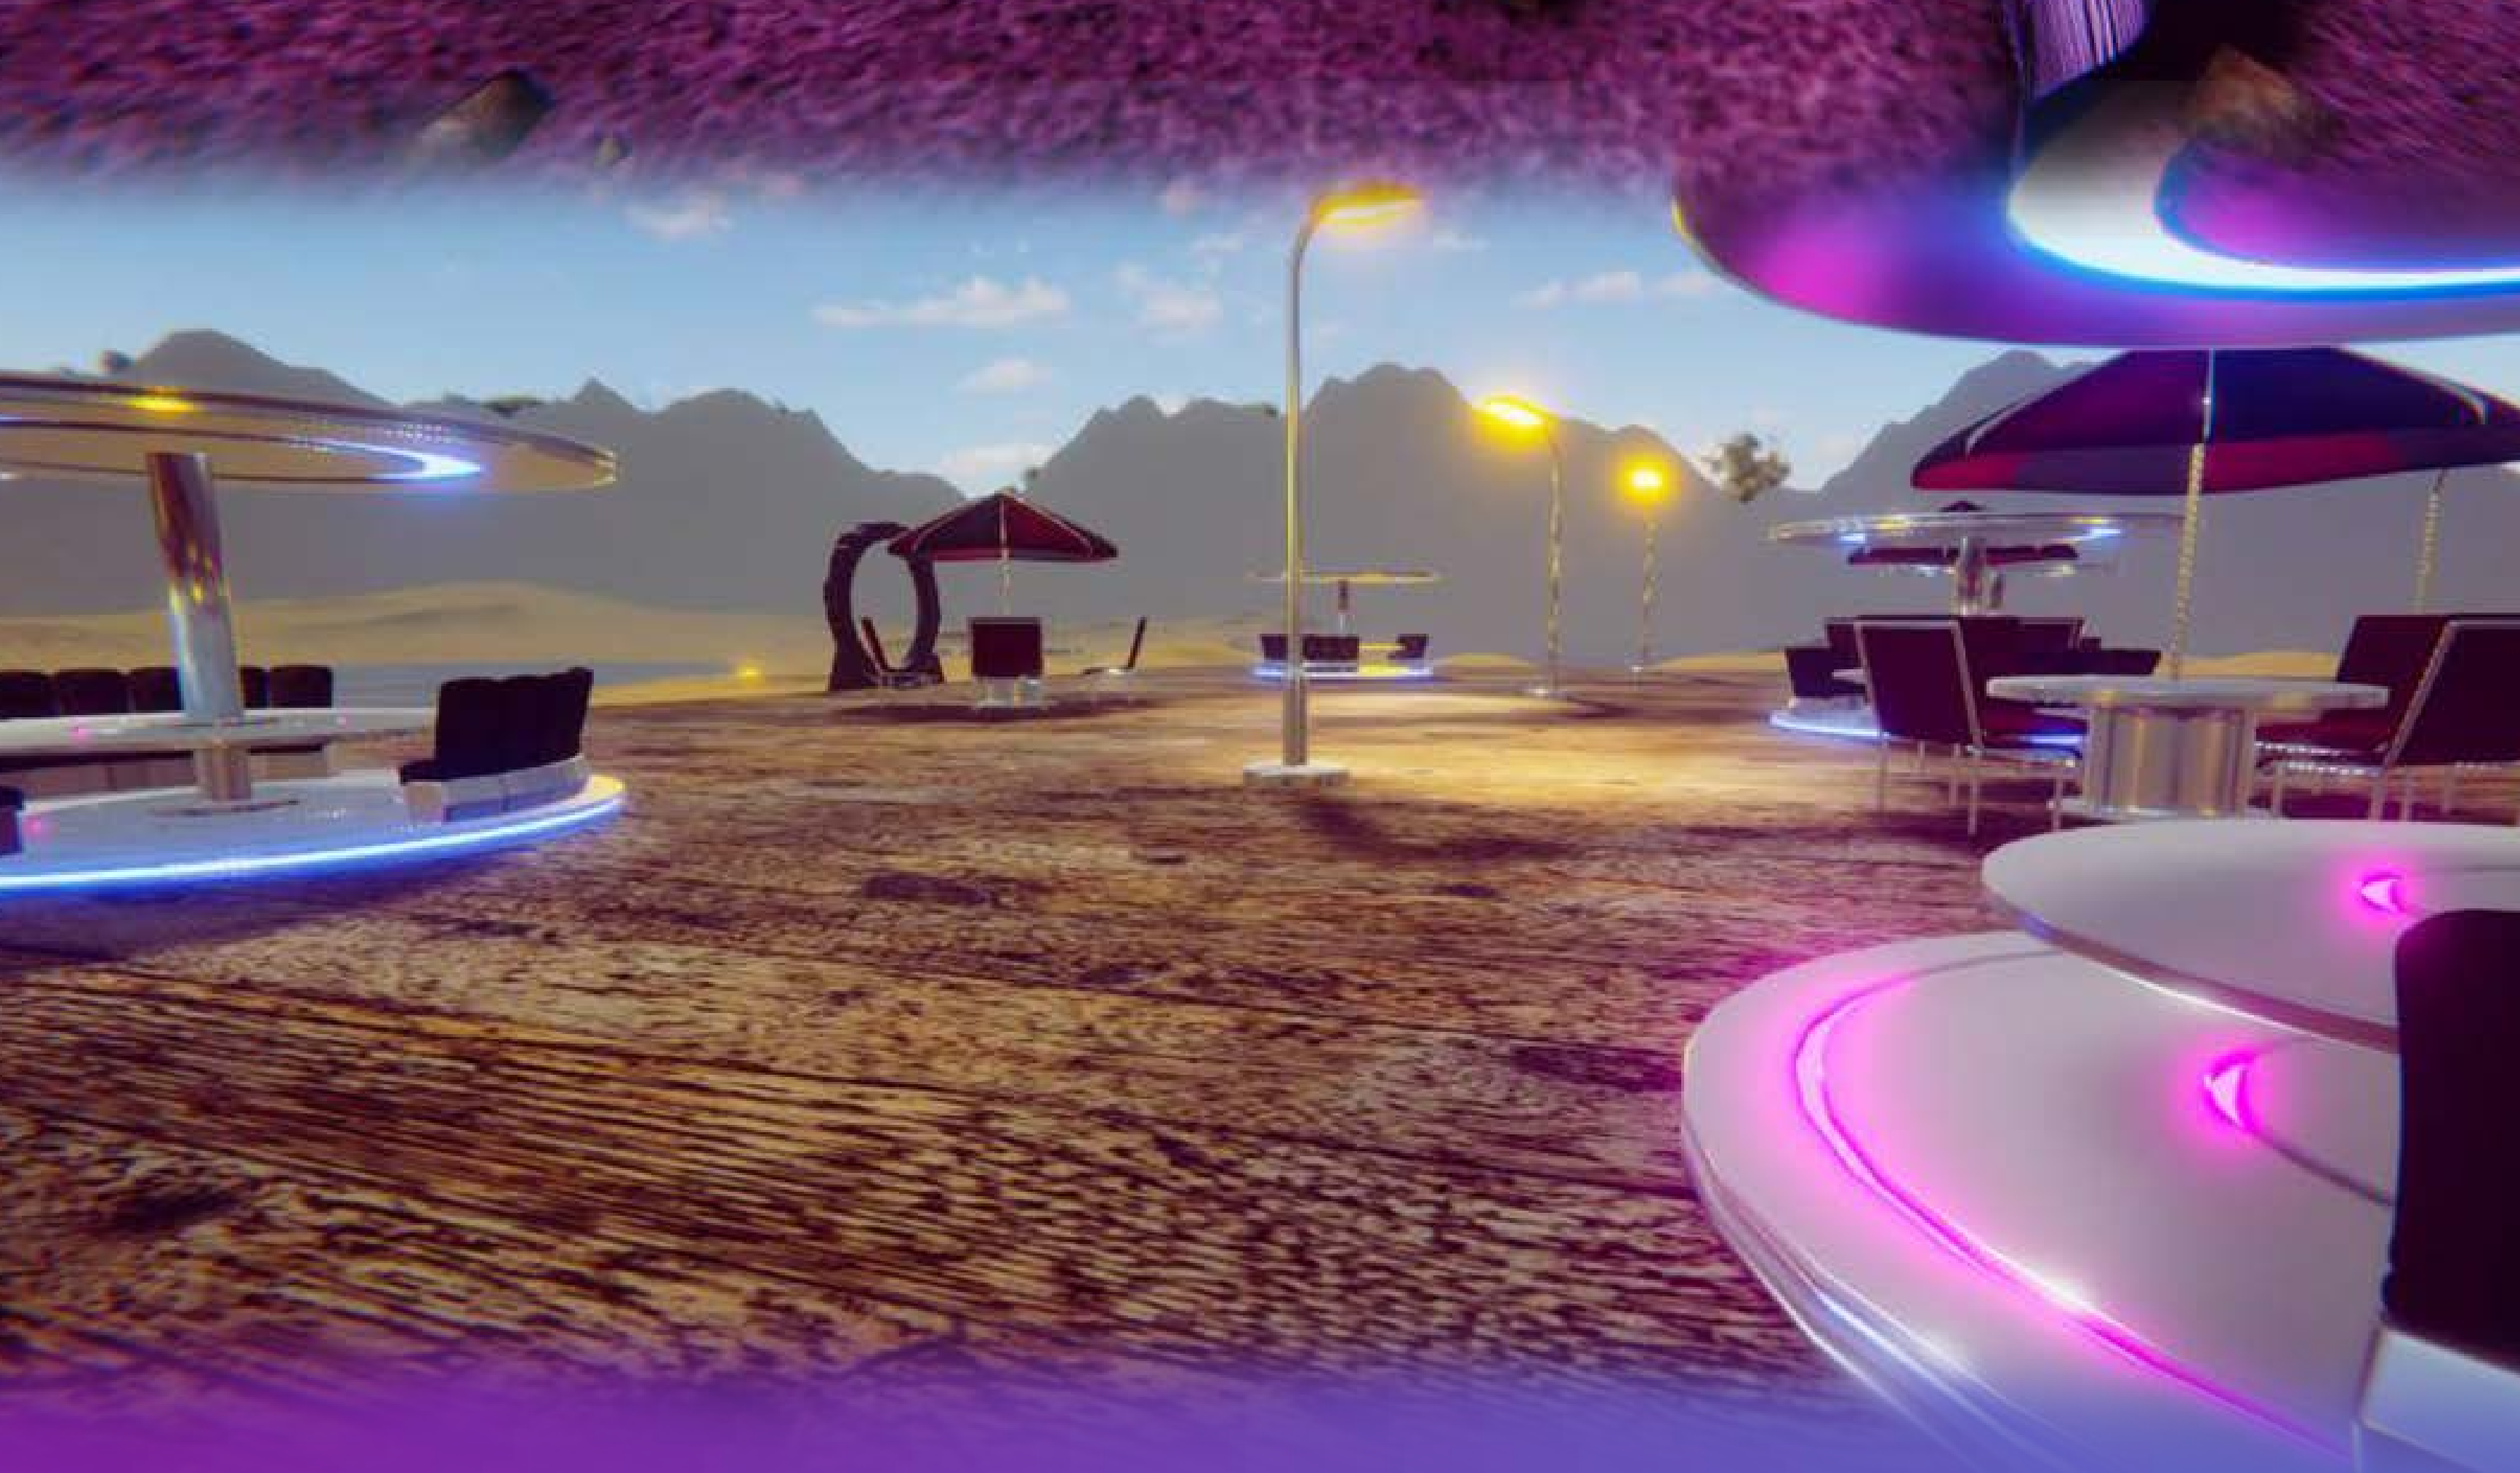

What is BRN Metaverse?

Metaverse is a token and technology project that brings innovations to its investors using the Web3, GameNFT, and Game-Fi ecosystems. To disseminate and develop Web3 technology, to design the Metaverse universe following a real Meta universe, to provide NFT marketplace, stake, and pre-sale opportunities, to provide convenience to NFT users or investors who want to enter the NFT market, to renew the MMO spirit and make it suitable for the Meta universe, It is a crypto asset produced to provide convenience to people by collecting data, to make people or brands stand out with advertisements and digital boards.

BRN Token on Metaverse

BRN Metaverse, which created its own game based on the project, provides a unique game opportunity in the Metaverse universe. The game offers its investors unique options such as duel areas, training areas, business departments, billboards, houses, and customizable and sellable lands, with a large area of exactly 4096 m². Contrary to what is known, Metaverse is to build a unique unbreakable bridge between the real world and the virtual universe, apart from cliché terms such as VR glasses and land sales, rather than being gathered under a single structure. BRN Metaverse, which set out with this vision, creates a design that can appeal to everyone with the game opportunity it has developed. In our metaverse universe, you can live your old spirit in our MMO areas, fight in these areas to earn money from our Game-Fi model, place in the rankings, participate in special tournaments, have fun with your friends and turn it into income. Not only with the game ecosystem, it also builds a large network within the game.

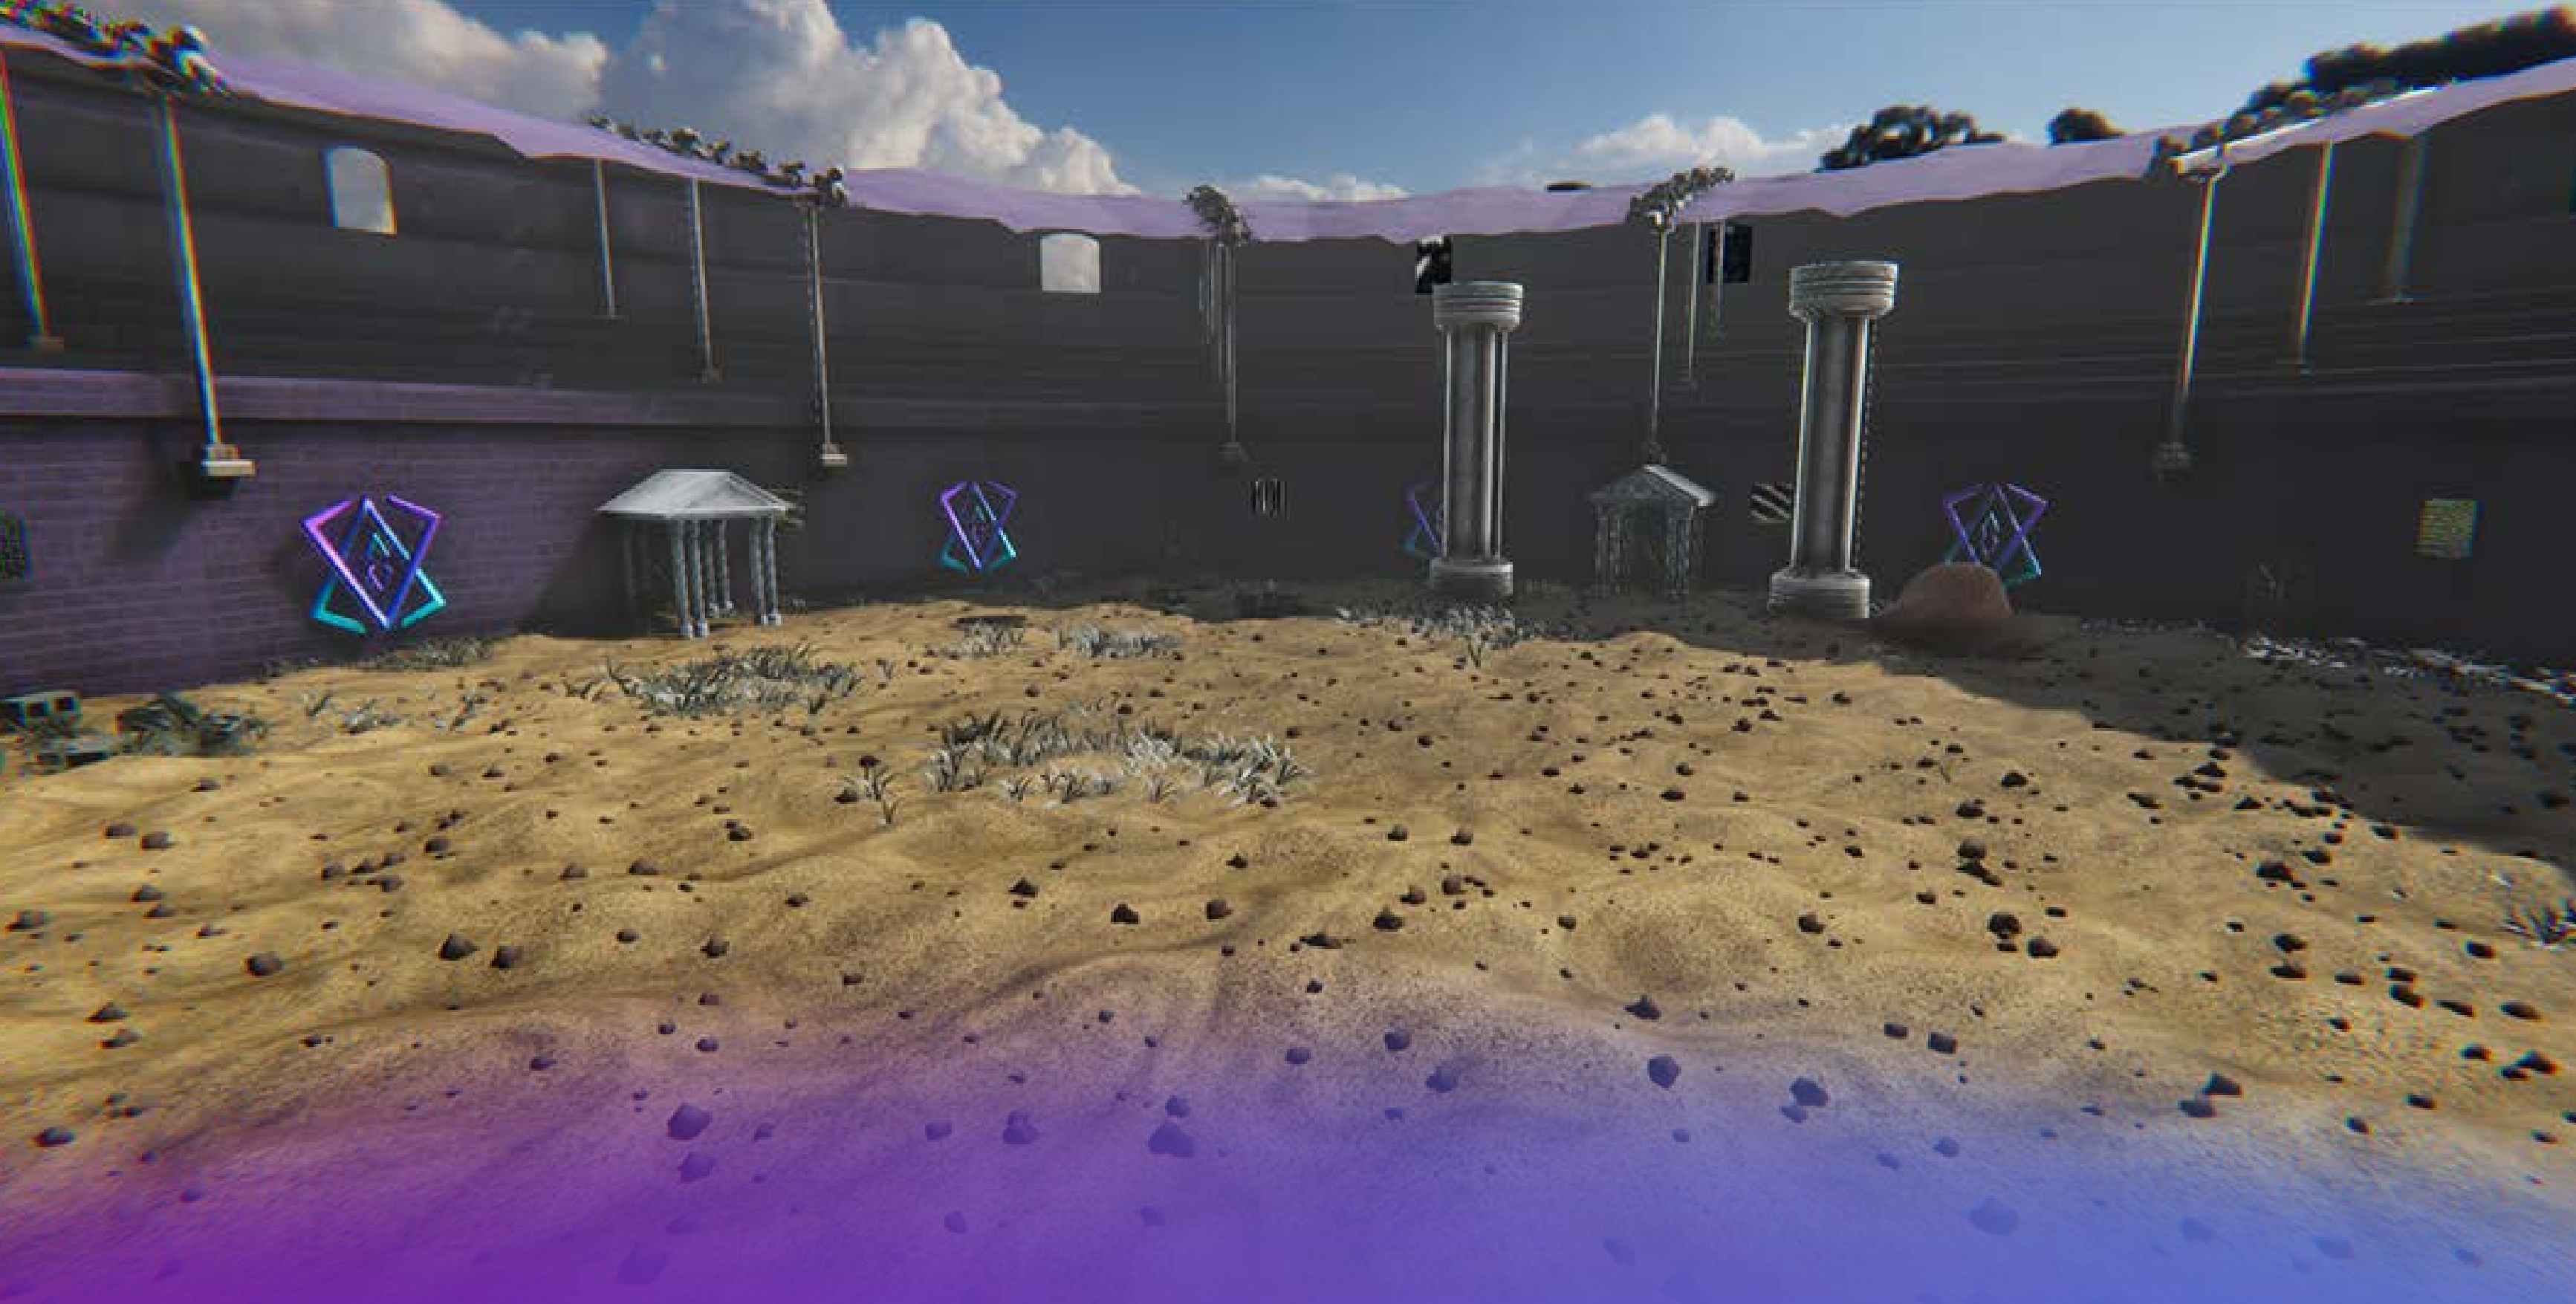

We have taken the initiative to make the lives of investors who cannot go to important crypto money conferences between countries due to time, financial opportunities, or people who want to exchange information easier. Our game will include Business departments, and live crypto conferences will take place there. You can see your favorite cryptocurrency analyst, commentator, developer, or trainer in our area, chat with him or attend his conference from anywhere. We also provide job opportunities in the business department. We provide safe and fast job opportunities to people working in any field in the crypto money field. With the infrastructure we have developed, you can create job postings from the departments related to your department in our department, and if you are an employer, you can open a job posting according to the criteria you are looking for.

BRN Metaverse at Game-Fi

The biggest problems of today's Metaverse games are that they need to develop solutions to inflation and deflation.

BRN Metaverse has brought an answer to this issue with its adjustments. In addition, you can earn income by fighting with the opponents you set in exchange for BRN Tokens in the PAID Arenas in our MMO areas.

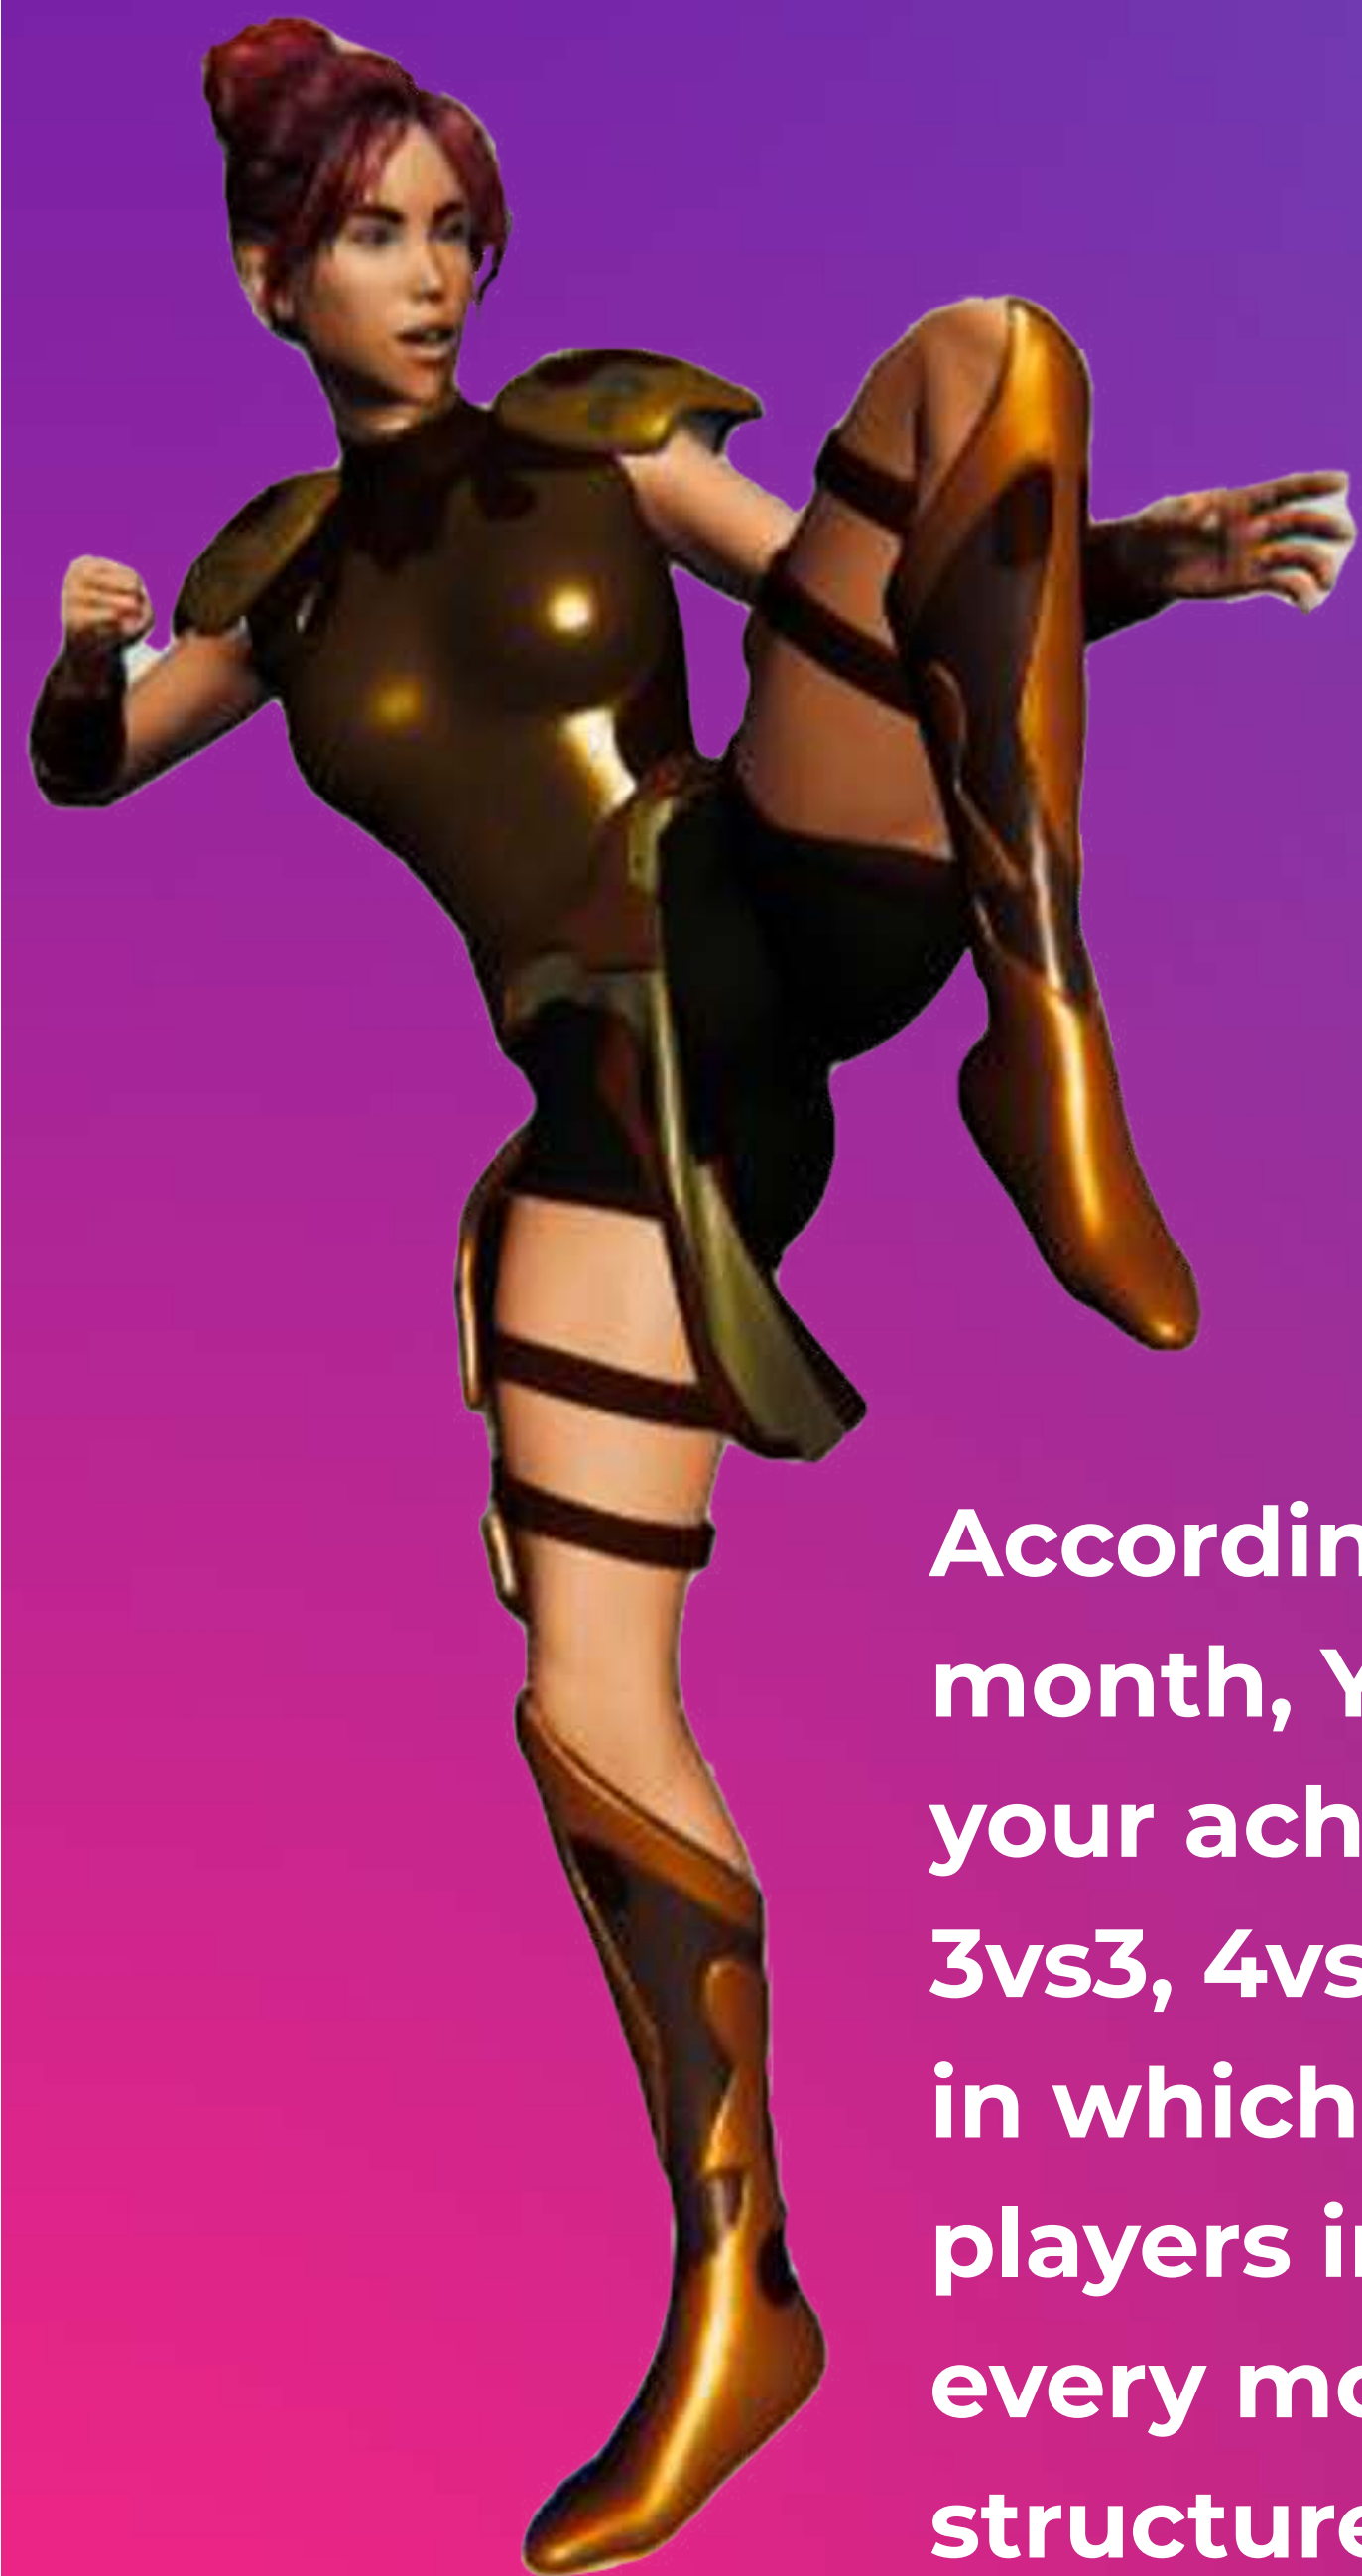

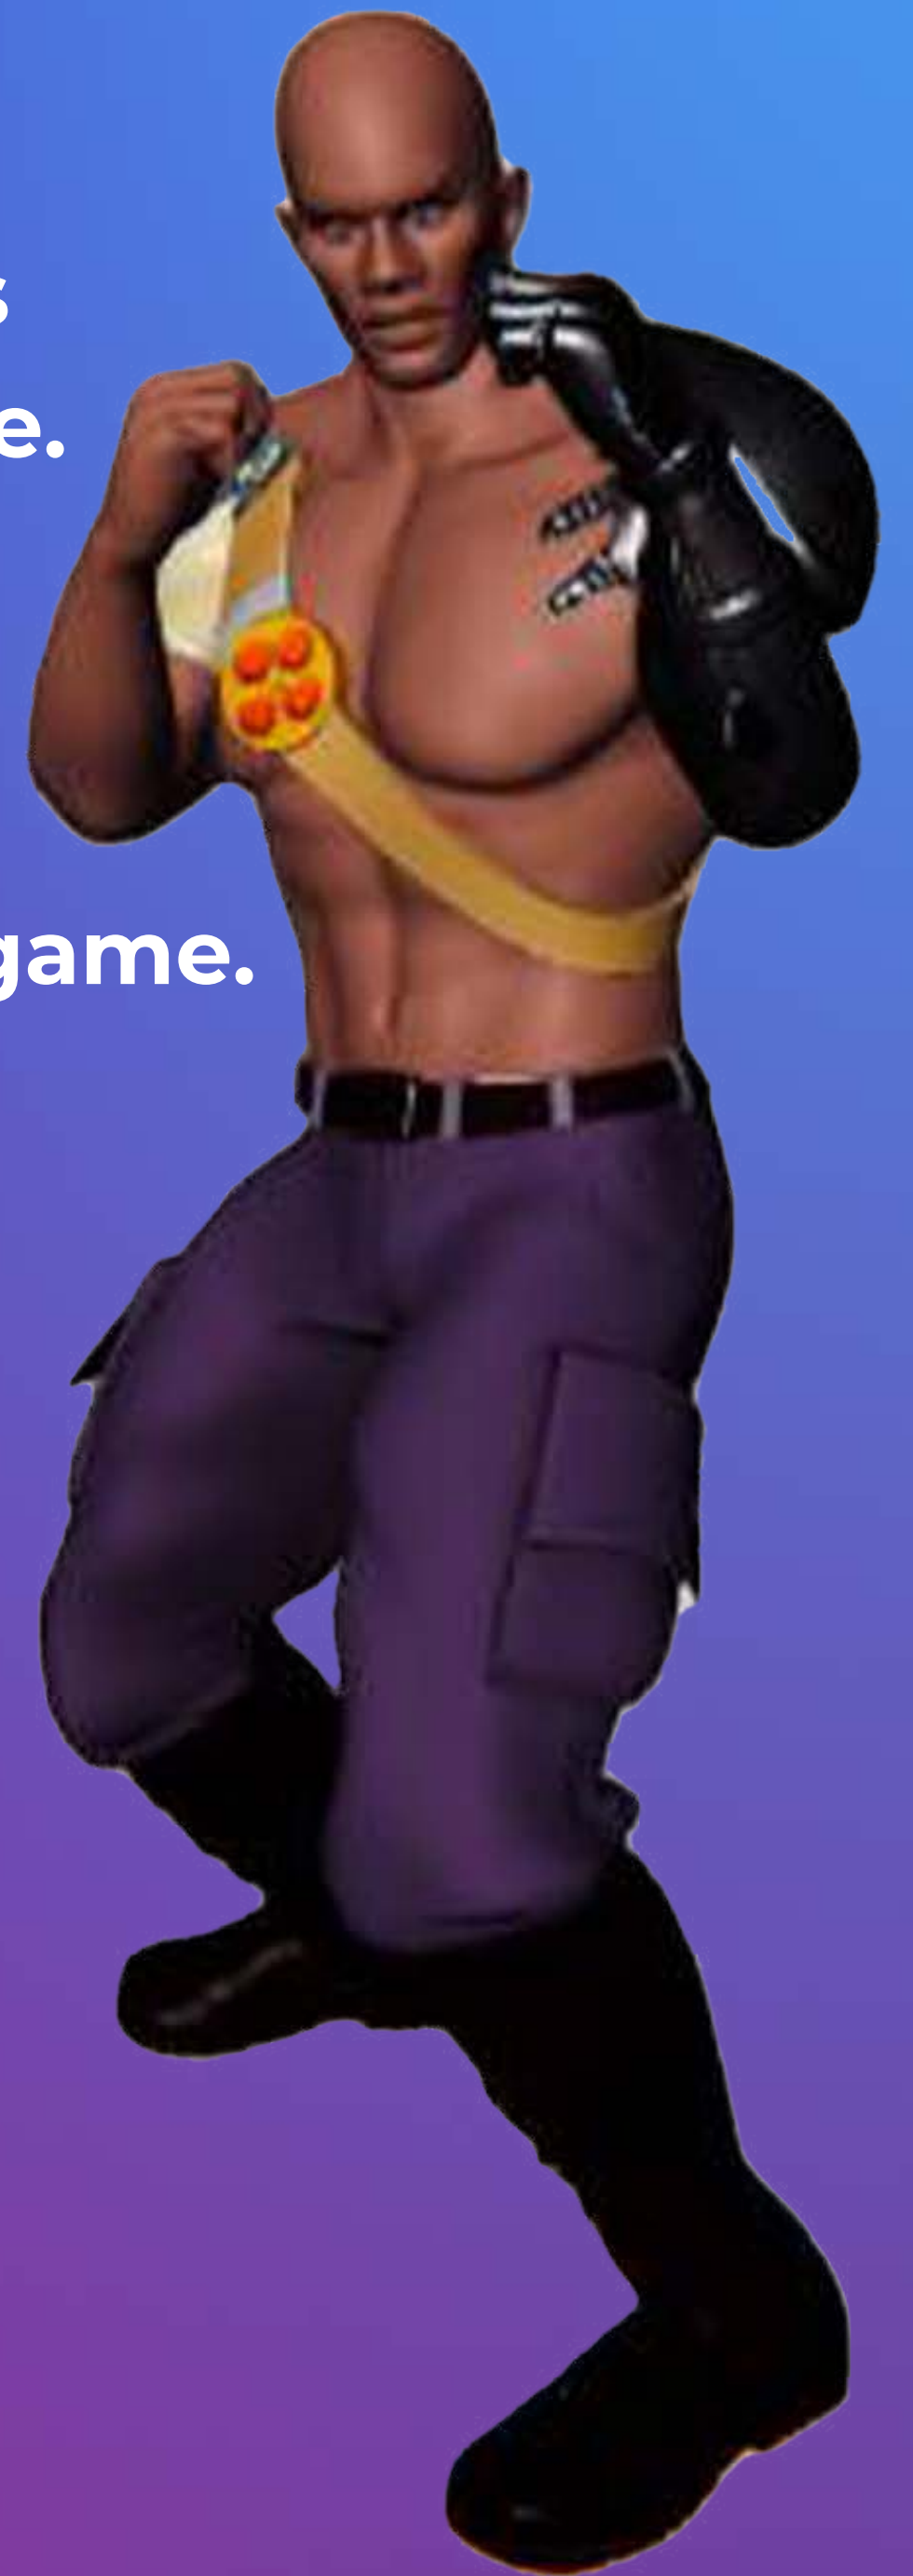

For example, you have 100 BRN and want to fight 1vs1 with your opponent in our arena area. You can meet your opponent in the arena by betting these 100 BRN on our site. Then, if you beat your opponent due to the match, you can automatically get 96% of the 100 BRN your opponent left as a bet, i.e., 96. The deducted 4% will go to the vault as a fee, and the tokens accumulated here will be distributed to our investors for monthly and weekly rewards. Since you cannot obtain free tokens in the arena areas, it has become a feature that can carry our project further without causing inflation.

You can earn income from arena areas and by killing NFT Monsters in the game. You can drop NFT Boxes from NFT monsters according to the chance percentage and get unique NFTs from this NFT box according to its level. You can also turn them into income by trading them on the NFT Marketplace.

You can also find a job in network and business fields and turn this structure into income.

You can also win weekly or monthly rewards from us by ranking our activities in the game. These are, in brief, rankings such as most Monsters killed in NFT Monsters and most tournament winners in Arena areas.

You can see these rankings instantly in the game.

According to the units in the arena areas every month, You can rank in the orders according to your achievements in areas such as 1vs1, 2vs2, 3vs3, 4vs4, and 5vs5, and a structure was created in which draws are made among our top 64 players in this ranking on a determined date every month. As a result of the matches in this structure, the opponents are eliminated by the elimination method, and our remaining players from the quarter-finals to the finals receive awards from us.

These rewards are covered by the tokens accumulated in the game pool. In addition, to keep the continuity even more active in our game, we integrate the clan system into our game and bring the feature of fighting between clans in the arenas. By forming your team, you can fight for BRN Metaverse in our special arenas in the game. Winning Clan members can get their rewards at the odds ratio. In addition, we will have a Survival Arena, which is opened only once at certain times of the day. In this arena, opponents can fight each other and enter the ranking. From this ranking, players who enter the weekly or monthly order are awarded from us. In short, we kept the MMO part of our game alive and added the Game-Fi model to every area from here.

BRN Metaverse at GameNFT

BRN Metaverse on GameNFT

Our unique NFTs are produced by our team that will further strengthen your characters in the game. These NFTs are designed so you can use them in your feelings in the game and trade them. Each character's NFTs will have different structures and features. We have built our infrastructure to buy or sell these NFTs.

You can buy these NFTs with BRN Tokens or other cryptocurrencies on our NFT Marketplace, then use them in your character or sell them on our NFT Marketplace. In order not to be limited to crypto-asset logic and to further develop the areas of BRN Metaverse, the NFTs we produce will be limited in number. You can get our characters for free in the game and the starting clothes on the characters you provide.

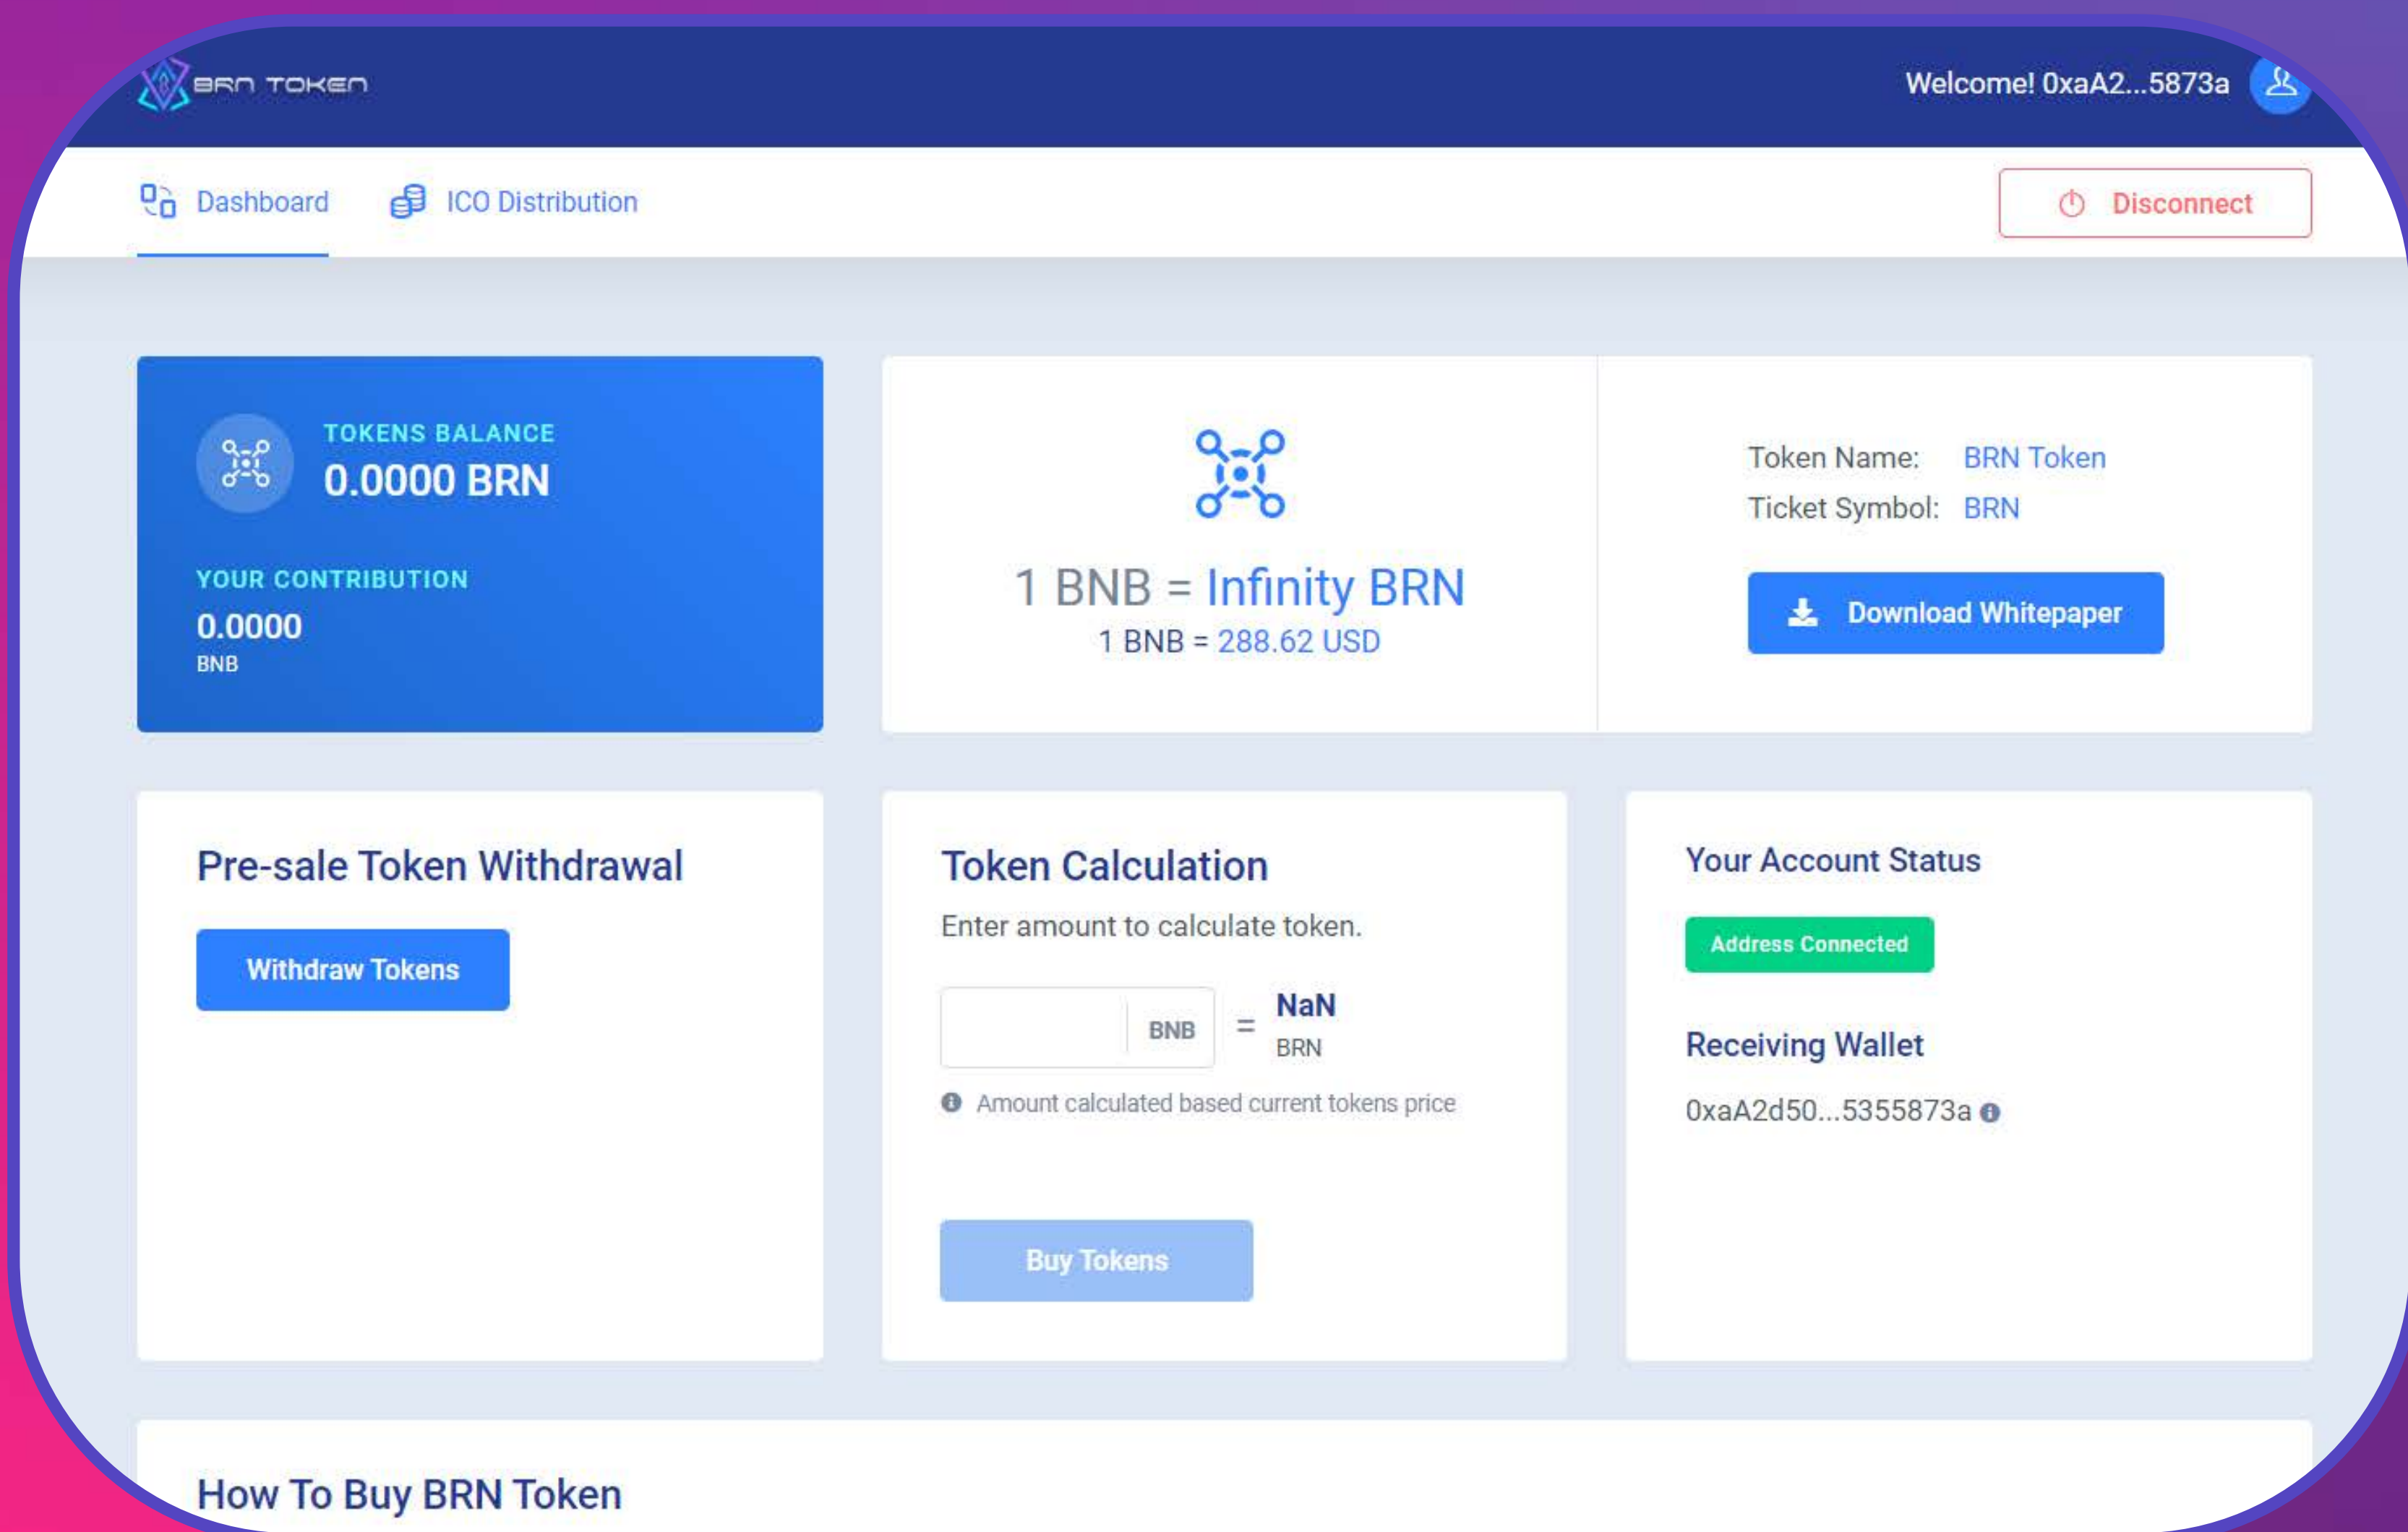

We will initially offer three unique NFT Collections, tier 1, tier 2, and tier 3. While each part of these NFT sets will give you power, combining them all can get extra powers. We have created our NFTs in a structure you can get from our win model as you play in the game instead of just selling them for money. By killing our unique monsters in certain game areas, you can drop NFT boxes from them depending on your luck. From this box, you can get level 1, level 2, level 3, or a special NFT piece for those monsters according to their chance percentage. If these items fit your character, you can wear them. If not, you can earn income by selling these NFT's on our NFT Marketplace.

Pre-Sale

We have become one of the rare projects that pre-sell in Web3 technology by writing our app rather than using the pre-installed interfaces in our pre-sale. This easy structure, which rotates over the receiver and the pool, saves you time and provides a stronger security opportunity. In addition, we returned to Blockchain's organizational structure without contacting the third party.

For example, when you make purchases in banks or the Web 2 system, the Receiver - Pool and approving units are located. In our technology, we carried out this transaction quickly and safely, directly as a Buyer-Pool, without needing an approving unit.

Staking

Using our own staking platform Web 3.0 technology we built. Stake on our website to our staking system. access area. Completely control this structure.

Between the Receiver and the Pool without allowing we did. Stakes are determined by the lock mechanism. Locked by day and amount. When the time is up our shooting button becomes active. In later times. We will extend our staking opportunity to cover other projects as well. We will develop it and make it easy for everyone.

NFT Marketplace

We have built the masterpiece of the ecosystem with WEB 3.0 technology to provide fast and secure transactions for the NFT's we produce and those produced by you. A quick and secure transaction occurs between the Buyer and the Seller in this structure. No unit audits and approves. You can sell the NFTs you have produced through a decentralized wallet or buy the NFTs you want quickly and securely.

In Our Metaverse Universe

The most important mechanism of the unique universe we are producing is Web 3.0 technology. We will use the multi-system school, leaving aside the systems that have been made so far. There will be different combinations at the entrance to the game. For example, investors or players with decentralized wallets can log into our game through their wallets and do not have to share any of their data with us. This technology has been developed to make it much easier for people to enter the game or shop while keeping their personal information safe.

Fields in BRN Metaverse

Arena Area We have special collectible arenas for our MMO area. In these areas, we have regions consisting of 5 different structures (1vs, 2vs2, 3vs3, 4vs4, or 5vs5), where you can earn income in exchange for BRN Tokens, respectively. We also have FREE arenas in our game to test your characters and get them ready for battle. However, you do not pay any TOKENS to enter here, and the ranking created here will not be reflected in the system. So you can't get a revenue model from FREE domains. Clan wars, Survival arenas, Champions arenas, and many Arena areas are built in our Metaverse universe.

Land Area

We will sell a small part of our game as a parcel. You can buy and sell the lands you purchased, or you can build a building in the structure you want on the ground you bought in the game. As an extra feature, there is a starting area in our game. Characters spawn here or return to this area when they lose in arena areas. If you build a house inside your land, you can choose your home as the place where you were born and when you died. Instead of using the damaged areas created for testing the characters, you can speed up your development by building it on your plot. You can also do digital advertising in the buildings you build. You can make your advertisement according to the special rules set on the special signs that belong to you, or you can change the name of your house as you wish. In addition, you can activate a separate Game-Fi model here and rent the advertising spaces of your places on the land you have purchased.

Business area

In this structure in our field, you can create a network for yourself and search for a job or worker in the crypto medium. We designed this area specific to the network area. You can have your conversations using the latest technology in our metaverse universe.

BRN Metaverse House

The largest structure of our game is devoted to the BRN Metaverse house. This house has been turned into a grand Conference. When we hold our meetings with the team open to the public, you can participate in our game, enter our live auctions here, and learn about the game update or project innovation live here. We make this structure open to you. Meeting areas within the building, business development areas, and the section reserved for our friends who want to work in the BRN Metaverse team have taken on a very functional structure as units where live events are held, conferences are held, and your favorite artist or commentator participates lively.

Billboards

Advertising boards are placed in certain areas of the game. You can buy or rent advertising space from these boards. You can advertise or develop your own company in this area. These boards are digitally created. Updates in the game will also be announced to our players on billboards. It is designed to be a limited number of sales and rentals. It is a structure that does not tire the eyes and does not interfere with the game's flow.

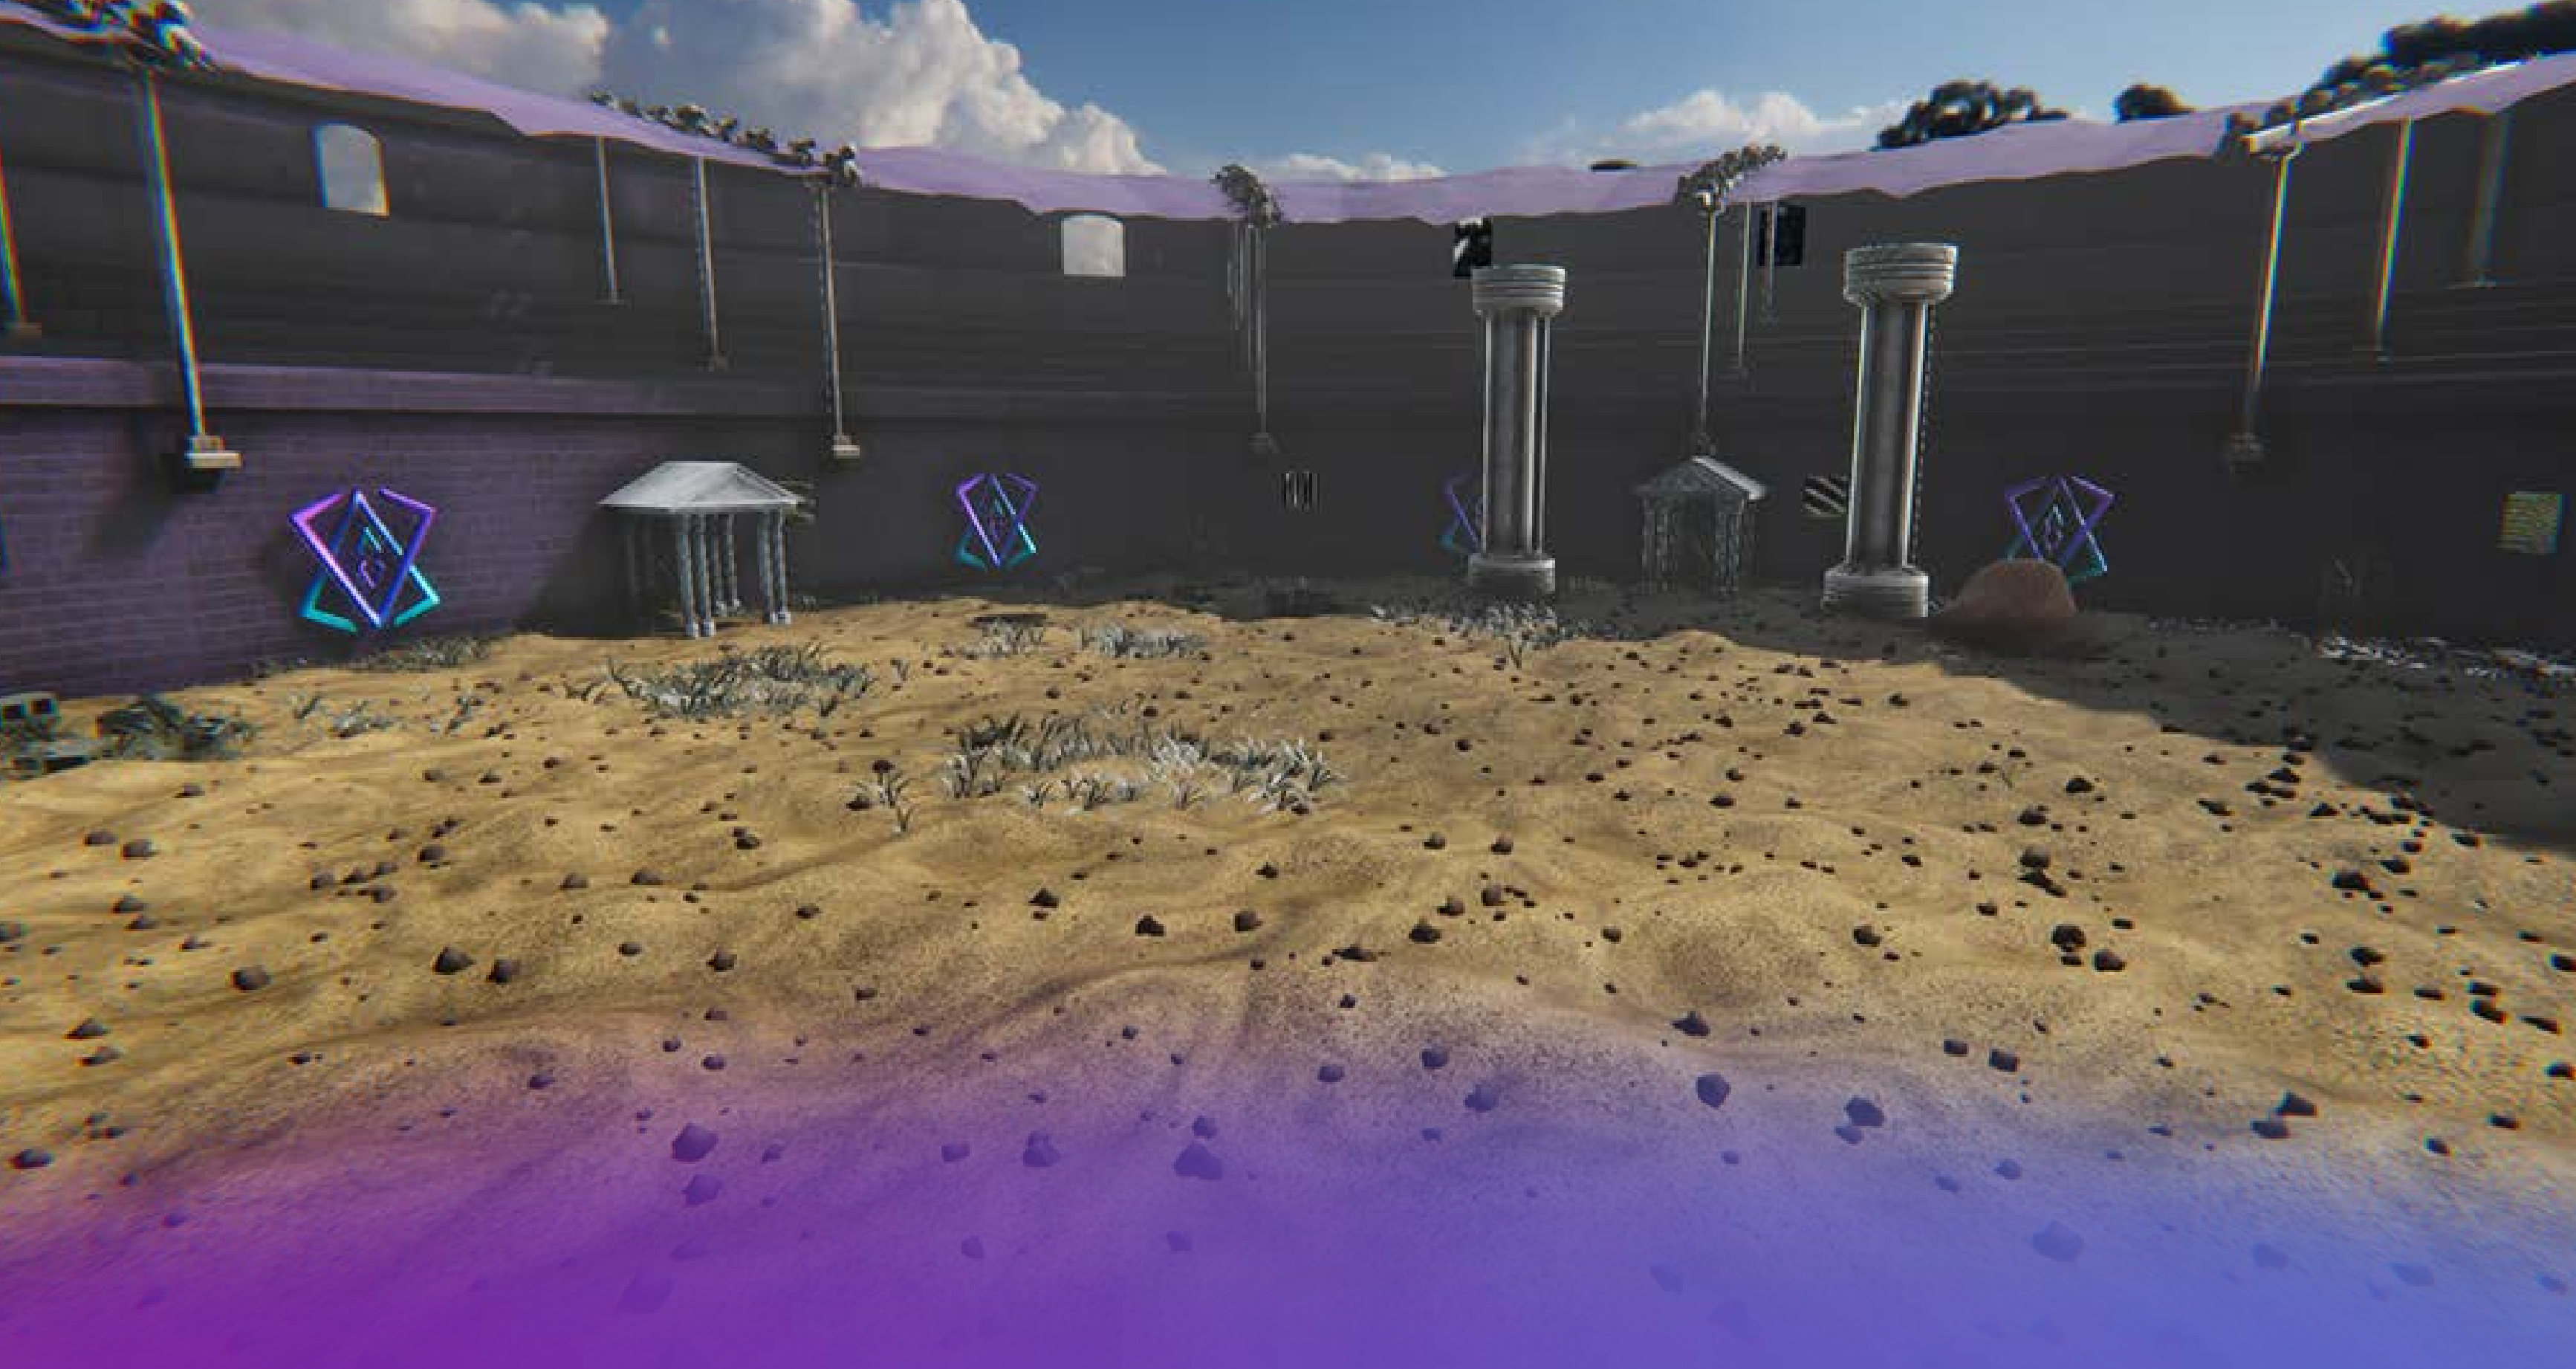

Lounge Area

This area has been designed as a real-life cafe. You can feel like you are in the real world in this area. It has been realized in a structure where you can socialize, make friends during the game or watch the unique nature.

BRN METAVERSE TECH COMPANY

BRN Metaverse, which opens the doors of the Metaverse universe to investors and players with the game it will create, aims to connect the Metaverse universe with the world you live in with the technology company it will establish. With the development of the ecosystem based on the game, a structure will be built where BRN Metaverse investors or players can feel their real-life experiences by using wearable technologies. It aims to increase the reality in our game by producing sunglasses or normal glasses that we can use in our daily lives rather than VR glasses.

In addition, it will not be satisfied with this. Still, it will produce biological tools so you can feel the war, adrenaline, excitement, or other experiences in the game physiologically. For example, smart watches, bracelets, necklaces, etc., aims to integrate and produce all products.
