Dear Aergo Community,

AERGO tokens have been reissued 1:1 via a new smart contract, and automatically distributed to the holders of the previous token. This will cause the previous contract address and tokens obsolete.

New AERGO token contract address is as below

Our team is working with third parties to update AERGO's new smart contract address accordingly. In the meantime, please add a custom token on Myetherwallet and Metamask

Please do NOT use the old smart contract address in any activities including OTC deals. All previous AERGO tokens will become worthless and won't have any impact on the secondary market.

We have notified our official exchanges of the new contract address. As soon as the exchanges migrate to the new AERGO contract address, trading and deposit/withdrawals will be available again.

Thank you, AERGO community for your support and patience!!
