From an ERC-20 token to **Nokuchain's native COIN.**

The NOKU token becomes the native coin of its blockchain, NOKU token holders will receive the same amount on Nokuchain as they have on Ethereum and at the same address!

A **SNAPSHOT** of NOKU token holders will be carried out on **October 19, 2021.**

Then the new native NOKU coin will be sent to all token holders, in the same quantities and to the same addresses present on Ethereum, but in the native blockchain, which is the Nokuchain.
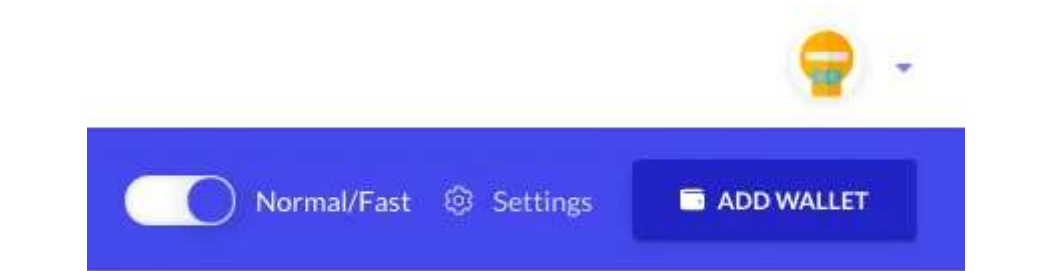

> *All **NOKU** holders will receive 1:1 **NOKU / NOKU v2.***

It will be sufficient to **open a wallet on the Nokuchain** (through the Noku platform at the address **Noku.io**) **with the same private keys** of the Ethereum
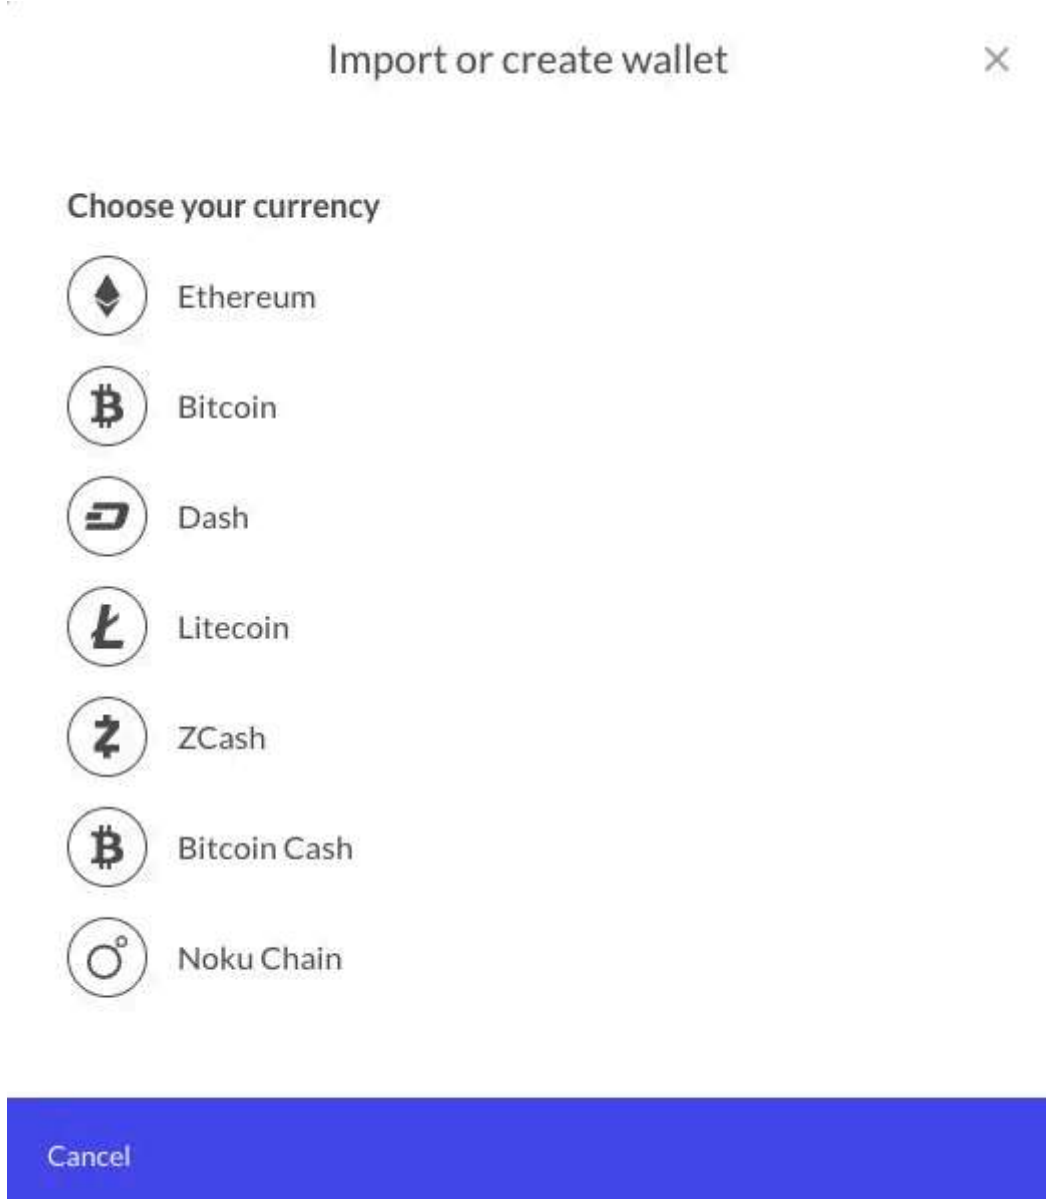

wallet and you will automatically receive the same amount of NOKU tokens.

Go to Noku Platform: noku.io (register a new account if you don't have one)

Click ADD WALLET

Select Nokuchain

to import a wallet, click on Private Key or Metamask or UTC/JSON File ... (or whatever you prefer, we suggest PK)

← Back

You can import a wallet , add a view-only address or create a new one.

You can import a wallet , add a view-only address or create a new one. Import your wallet of choice where you will be able to manage all of your token operations.

Create a new Wallet 〉

Metamask 〉

Ledger 〉

UTC / JSON File 〉

View only address 〉

Cancel

Insert your PK (Private Key)

Import or create wallet

← Back

Please enter your 64 hexadecimal Private Key

Copy and paste it, beware of the empty spaces.

Private Key

Unlock

Cancel

and you will create a wallet (with the same address) with your NOKU coins!

My Wallets

♂ Nokuchain 🔒

0xcc83e2ad...2b152b849b

Total Balance ~ 2'100 NOKU

♂ 2'100 NOKU   🌐 NCH

You will now have your native coins on Nokuchain.

> *The original NOKU token will continue after the token swap, but will be obsolete.*

Nokuchain: Proof of Anchorage protocol with ZERO FEE

Nokuchainis an EVM (Ethereum Virtual Machine) blockchain, extremely fast (5s per block) with **ZERO FEE.** Nokuchain has a **Proof of Anchorage** protocol. It means that for each series of blocks (the epoch is variable) the Nokuchain applies a hash function and notarizes the result on the first available block of the Ethereum network.

> *So Nokuchain is a blockchain anchored to Ethereum*

After 4 years of work, this is the result of putting more and more efficient technology on the market to meet the needs of users.

In recent years Noku has developed a **wallet platform** for the management of multi-blockchains (including Bitcoin and Ethereum), the management and creation of multi-assets (**ERC-20 and ERC-721**). Noku created a security asset standard for Ethereum Foundation (**ERC-2980**). Noku also created **stacking, swap, and bridge services.**
Over the past year, NOKU has focused on developing its EVM and a series of smart contracts for its own **NFT Gaming protocol.**
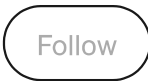

The first game that went live is **Crypto Heroes!**

Further communications on the use and structure of the **NOKU coin** will follow.
