Follow

Fellow CoinTiger users,

CoinTiger is going to upgrade TCH smart contract. TCH will support ETH, BSC, HECO chain and Swap after the upgrade. The total supply of TCH will keep the same as 1,000,000,000.

TCH new smart contract address (ETH&BSC&HECO)：0x5ecc4b299e23f526980c33fe35eff531a54aedb1

CoinTiger will make the following suspension on 14:00 21 June 2021 (UTC+8)

1.TCH deposit and withdrawal will be suspended, but the trading on the platform won't be affected during the suspension.

2.TCH on-chain transfer with the old contract address will be suspended. To avoid suffering from any loss or being not able to receive the new TCH, users who have traded or added liquidity on DEX like Uniswap should withdraw their TCH to their own wallets or CoinTiger before the suspension.

Users who hold TCH in their own wallets (not CoinTiger) will receive the new TCH in a 1:1 ratio before 22 June 2021. It won't have any effect on the users who hold TCH on CoinTiger.

CoinTiger will resume TCH deposit and withdrawal and open new TCH contract functions on 18:00 22 June 2021 (UTC+8)
