

The World's First HTML5 Blockchain Engine and Platform

Bring 200,000 developers and
1 billion HTML5 terminals
to the blockchain world

White Paper

This White Paper is intended for
internal and community discussion only.

It is not a legally binding document.
Developers are relieved of all liability.
Detailed information will be released in later versions.

Brief

Our vision:

“Bring 200,000 Developers and 1 Billion HTML5 Devices to The Blockchain World.”

As a cross-platform solution, HTML5 technology has been globally recognized. It covers the Internet, mobile games, video, advertising and other industries, with the global market size of hundreds of billions dollars.

After blockchain game CryptoKitties became popular, Ethereum's smart contract applications added a new member - HTML5 games.

This project cooperating with Egret Technology, a globally well-known HTML5 technology service provider, set up Egretia Blockchain Lab, combining blockchain with HTML5 technology to create the world's first HTML5 blockchain engine and platform, aiming for applying blockchain to vertical industries. Bringing Egret Technology's existing 200,000 developers and 1 billion mobile terminal devices into the blockchain world, this project has practical and far-reaching significance.

Roadmap and Milestone

IMPORTANT NOTICE AND DISCLAIMER

PLEASE READ THE ENTIRETY OF THIS "NOTICE" SECTION CAREFULLY. NOTHING IN THIS WHITEPAPER CONSTITUTES LEGAL, FINANCIAL, BUSINESS OR TAX ADVICE AND YOU SHOULD CONSULT YOUR OWN LEGAL, FINANCIAL, TAX OR OTHER PROFESSIONAL ADVISOR(S) BEFORE ENGAGING IN ANY ACTIVITY IN CONNECTION HEREWITH. NEITHER EGRETIA FOUNDATION LIMITED (THE FOUNDATION), ANY OF THE PROJECT TEAM MEMBERS (THE EGRETIA TEAM) WHO HAVE WORKED ON THE EGRETIA NETWORK (AS DEFINED HEREIN) OR PROJECT TO DEVELOP THE EGRETIA NETWORK IN ANY WAY WHATSOEVER, ANY DISTRIBUTOR/VENDOR OF EGRETEN (THE DISTRIBUTOR), NOR ANY SERVICE PROVIDER SHALL BE LIABLE FOR ANY KIND OF DIRECT OR INDIRECT DAMAGE OR LOSS WHATSOEVER WHICH YOU MAY SUFFER IN CONNECTION WITH ACCESSING THIS WHITEPAPER, THE WEBSITE AT [HTTP://EGRETIA.IO/](http://egretia.io/) (THE WEBSITE) OR ANY OTHER WEBSITES OR MATERIALS PUBLISHED BY THE FOUNDATION.

All contributions will be applied towards the advancing, promoting the research, design and development of, and advocacy for the world's first HTML5 blockchain engine and platform, combining blockchain technology with proven tools, communities and content of partners. The Foundation, the Distributor and their various affiliates would develop, manage and operate the Egretia Network.

This Whitepaper is intended for general informational purposes only and does not constitute a prospectus, an offer document, an offer of securities, a solicitation for investment, or any offer to sell any product, item or asset (whether digital or otherwise). The information herein below may not be exhaustive and does not imply any elements of a contractual relationship. There is no assurance as to the accuracy or completeness of such information and no representation, warranty or undertaking is or purported to be provided as to the accuracy or completeness of such information.

Where this Whitepaper includes information that has been obtained from third party sources, the Foundation and/or the Egretia team have not independently verified the accuracy or completion of such information. Further, you acknowledge that circumstances may change and that this Whitepaper may become outdated as a result; and the Foundation is under no obligation to update or correct this document in connection therewith.

This Whitepaper does not constitute any offer by the Foundation, the Distributor or the Egretia team to sell any Egreten (as defined herein) nor shall it or any part of it nor the fact of its presentation form the basis of, or be relied upon in connection with, any contract or investment decision. Nothing contained in this Whitepaper is or may be relied upon as a promise, representation or undertaking as to the future performance of the Egretia Network. The agreement between the Distributor and you, in relation to any sale and purchase of Egreten is to be governed by only the separate terms and conditions of such agreement.

By accessing this Whitepaper or any part thereof, you represent and warrant to the Foundation, its affiliates, and the Egretia team as follows:

- (a) in any decision to purchase any Egreten, you have not relied on any statement set out in this Whitepaper;
- (b) you will and shall at your own expense ensure compliance with all laws, regulatory requirements and restrictions applicable to you (as the case may be);
- (c) you acknowledge, understand and agree that Egreten may have no value, there is no guarantee or representation of value or liquidity for Egreten, and Egreten is not for speculative investment;
- (d) none of the Foundation, its affiliates, and/or the Egretia team members shall be responsible for or liable for the value of Egreten, the transferability and/or liquidity of Egreten and/or the availability of any market for Egreten through third parties or otherwise; and
- (e) you acknowledge, understand and agree that you are not eligible to purchase any Egreten if you are a citizen, national, resident (tax or otherwise), domiciliary and/or green card holder of a geographic area or country (i) where it is likely that

the sale of Egreten would be construed as the sale of a security (howsoever named) or investment product and/or (ii) in which access to or participation in the Egreten token sale or the Egretia Network is prohibited by applicable law, decree, regulation, treaty, or administrative act, and/or (including without limitation the United States of America, Canada, New Zealand, People's Republic of China, and the Republic of Korea).

The Foundation, the Distributor and the Egretia team do not and do not purport to make, and hereby disclaims, all representations, warranties or undertaking to any entity or person (including without limitation warranties as to the accuracy, completeness, timeliness or reliability of the contents of this Whitepaper or any other materials published by the Foundation). To the maximum extent permitted by law, the Foundation, the Distributor, their related entities and service providers shall not be liable for any indirect, special, incidental, consequential or other losses of any kind, in tort, contract or otherwise (including, without limitation, any liability arising from default or negligence on the part of any of them, or any loss of revenue, income or profits, and loss of use or data) arising from the use of this Whitepaper or any other materials published, or its contents (including without limitation any errors or omissions) or otherwise arising in connection with the same. Prospective purchasers of Egreten should carefully consider and evaluate all risks and uncertainties (including financial and legal risks and uncertainties) associated with the Egreten token sale, the Foundation, the Distributor and the Egretia team.

The information set out in this Whitepaper is for community discussion only and is not legally binding. No person is bound to enter into any contract or binding legal commitment in relation to the acquisition of Egreten, and no virtual currency or other form of payment is to be accepted on the basis of this Whitepaper. The agreement for sale and purchase of Egreten and/or continued holding of Egreten shall be governed by a separate set of Terms and Conditions or Token Purchase Agreement (as the case may be) setting out the terms of such purchase and/or continued holding of Egreten (the Terms and Conditions), which shall be separately provided to you or made available on the Website. In the event of any inconsistencies between the Terms and Conditions and this Whitepaper, the Terms and Conditions shall prevail.

No regulatory authority has examined or approved of any of the information set out in this Whitepaper. No such action has been or will be taken under the laws, regulatory requirements or rules of any jurisdiction. The publication, distribution or dissemination of this Whitepaper does not imply that the applicable laws, regulatory requirements or rules have been complied with.

This is only a conceptual whitepaper describing the future development goals for the Egretia Network to be developed. This Whitepaper may be amended or replaced from time to time. There are no obligations to update this Whitepaper or to provide recipients with access to any information beyond what is provided in this Whitepaper.

All statements contained in this Whitepaper, statements made in press releases or in any place accessible by the public and oral statements that may be made by the Foundation, the Distributor and/or the Egretia team may constitute forward-looking statements (including statements regarding intent, belief or current expectations with respect to market conditions, business strategy and plans, financial condition, specific provisions and risk management practices). You are cautioned not to place undue reliance on these forward-looking statements given that these statements involve known and unknown risks, uncertainties and other factors that may cause the actual future results to be materially different from that described by such forward-looking statements, and no independent third party has reviewed the reasonableness of any such statements or assumptions. These forward-looking statements are applicable only as of the date of this Whitepaper and the Foundation and the Egretia team expressly disclaims any responsibility (whether express or implied) to release any revisions to these forward-looking statements to reflect events after such date.

The use of any company and/or platform names or trademarks herein (save for those which relate to the Foundation or its affiliates) does not imply any affiliation with, or endorsement by, any third party. References in this Whitepaper to specific companies and platforms are for illustrative purposes only.

This Whitepaper may be translated into a language other than English and in the event of conflict or ambiguity between the English language version and translated

versions of this Whitepaper, the English language version shall prevail. You acknowledge that you have read and understood the English language version of this Whitepaper.

No part of this Whitepaper is to be copied, reproduced, distributed or disseminated in any way without the prior written consent of the Foundation.

Chapter 1

Background

- 1.1 Introduction to HTML5
- 1.2 Blockchain Industry Background

Background

1.1 Introduction to HTML5

In recent years, after many hardware upgrades and rapid development of Internet technology, some bottlenecks (such as performance, traffic and compatibility) that previously limited the operation of HTML5 games have now been eliminated. Due to the cross-platform nature of HTML5, this technology is widely used in games, marketing, video, media, etc. Using the power of mobile social networking, HTML5 content has been widely disseminated in mobile apps and created entirely new business models.

From their perspective, and due to the rapid pace of their lives and work, users would like to make use of "fragmented time" at each leisure opportunity and enjoy relaxation and entertainment. In terms of app operators, a new model is expected to enhance user stickiness, gaining more traffic.

Click-and-play, viral transmission, user stickiness, these characteristics of an HTML5 game make it a perfect fit for the current market demands.

Currently, users of HTML5 games already account for 47% of all mobile game users. In terms of the business model, in-game payment, instead of advertising, has become the main source of revenue accounting for 68%. Combined, HTML5 games already have an independent commercial profitability. In 2017, the market size of HTML5 games in China exceeded 10 billion Yuan and showed a growing trend. After more than four years of evolution and development, HTML5 games

have witnessed huge improvements related to business models, user numbers, and market size.

The domestic revenue of high-quality HTML5 games, has reached 200 million Yuan.

HTML5 technology has been globally recognised as a cross-platform and cross-terminal solution. It covers the Internet, mobile game, video, advertising and other industries, with a global market opportunity of 100 billion dollars.

Trend

Due to the advantages of HTML5 technology, an increasing number of well-known enterprises have adopted this technology:

- Google launched PWA, advocating Android Instant Apps based on HTML5 technology.
- Baidu promoted "light-weight apps" based on HTML5 technology.
- Facebook released Instant Games based on HTML5 technology in Messenger with more than 1 billion daily active users and opened its advertising and payment service for Instant Games at the end of 2017.
- In January 2018, Tencent WeChat released a series of mini-games, some of those games gaining over 100 million daily active users.

Overall, HTML5 has become one of the global Internet technology trends.

Pain Points

Despite the rapid development of HTML5 industry, there still remain many pain points:

- Lack of a global, unified and secure payment platform;
- Lack of solutions to securely store virtual assets of users;
- Lack of mechanisms to ensure "fairness" in games;

- Lack of solutions to rapidly respond to distributed back-end communications;
- Lack of mechanisms to effectively protect the intellectual property of HTML5 products;
- Need for effective mechanisms to motivate good teams to develop high-quality games and apps;
- Need for diversified approaches to monetise internet traffic.

1.2 Blockchain Industry Background

In recent years, blockchain technology has gradually been understood and applied to related projects; advantages and disadvantages of the blockchain itself have become increasingly obvious.

Advantages:

- Distributed ledger mechanism: safe, transparent and tamper-resistant;
- Turing-complete smart contracts: fair-and-square;
- Decentralised data storage combined with smart contracts: responsive and reliable;
- Token system, unified payment and settlement.

Disadvantages:

- Poor development, testing, and upgrade process;
- Poor development tools and a small development community;
- User inconveniences, costs of learning are high;
- Security issues of accounts and wallets.

The Egretia team has joined hands with Egret Technology to create Egretia Blockchain Lab. By combining blockchain technology with proven HTML5 workflows, developers will be able to rapidly develop blockchain applications and truly apply blockchain to the vertical industries.

Chapter 2

Our Mission

- 2.1 World's First HTML5 Engine and Platform
- 2.2 Building a Decentralized HTML5 User Ecosystem
- 2.3 Creating an Ecosystem With True Token Circulation

Our Vision

“Bring 200,000 Developers and 1 Billion HTML5 Devices to The Blockchain World.”

2.1 World's First HTML5 Blockchain Engine and Platform

In partnership with Egret Technology, the global leader in the HTML5 industry, the Egretia team is committed to building the world's first HTML5 blockchain engine and platform, combining blockchain technology with proven tools, communities and content of partners, aiming to bring 200,000 developers and 1 billion mobile devices into the blockchain world.

User Ecosystem:

- The content powered by Egret Engine has reached hundreds of millions of users. For every user, a unique cryptographic passport with digital encryption will be created.
- Users will be provided with a low-threshold, high-security digital wallet, serving as a safe payment platform for all HTML5 blockchain applications.
- A digital virtual currency token that potentially circulates in HTML5 projects all over the world will be created: (**Egreten**).
- An effective, sustainable ecosystem will be built for users.

Technical Aspects:

- Modularising blockchain functions, integrating them into the Egret Engine and its front-end development tools, will contribute to directly reach more than 200,000 developers. Integrating Egreten into hundreds of thousands of games and applications, will help to directly reach more than 1 billion users worldwide.
- Integrating blockchain technology into the backend service logic, using node servers around the world will provide HTML5 products with fast communication solutions and trusted smart contract server logic.

- A complete development suite, documentation and development community will be built, to provide a most complete and convenient developer ecosystem.

Operational Aspects :

- Through the existing Egret game platform with 40 million monthly active users, the Egretia Network already has a professional global team of game and app distributors. They are operating the content and there are plans to integrate the Egret token payment system, thus promoting actual utility and circulation of Egret.
- Together with strategic partners such as Facebook and Google, the Egretia Network has a well-established advertising platform to promote Egret-based games and products.

2.2 Building a Decentralised HTML5 User Ecosystem

Powered by the Egret Engine, HTML5 content has over 75% marketing penetration in the HTML5 industry, covering more than 1 billion mobile devices and users.

The blockchain of the Egretia Network will be combined with Egret HTML5 workflows. Using a token mechanism, every player will have a unique ID in games powered by the Egret Engine. This will build a solid foundation for a stable user ecosystem.

- Every user worldwide has a unique token passport in any game or application which is developed based on the blockchain of the Egretia Network.
- The anonymity and encryption mechanism of the token passport effectively ensures the privacy of users.
- Using unique, anonymous, secure tags, the identity of a user is not limited to one application or one game. By using a unique, virtual identity, every user can enjoy a life in the virtual world based on the Egretia Network.

- Due to the transparency and irreversibility of blockchain, as well as the unique passport of each user, available throughout the content system built by the Egretia Network, users can be accurately identified and rated for their trustworthiness. Users can also safely communicate with other users around the world using the Egretia Network, making friends, exchanging virtual assets, etc.

2.3 Creating an Ecosystem With True Token Circulation

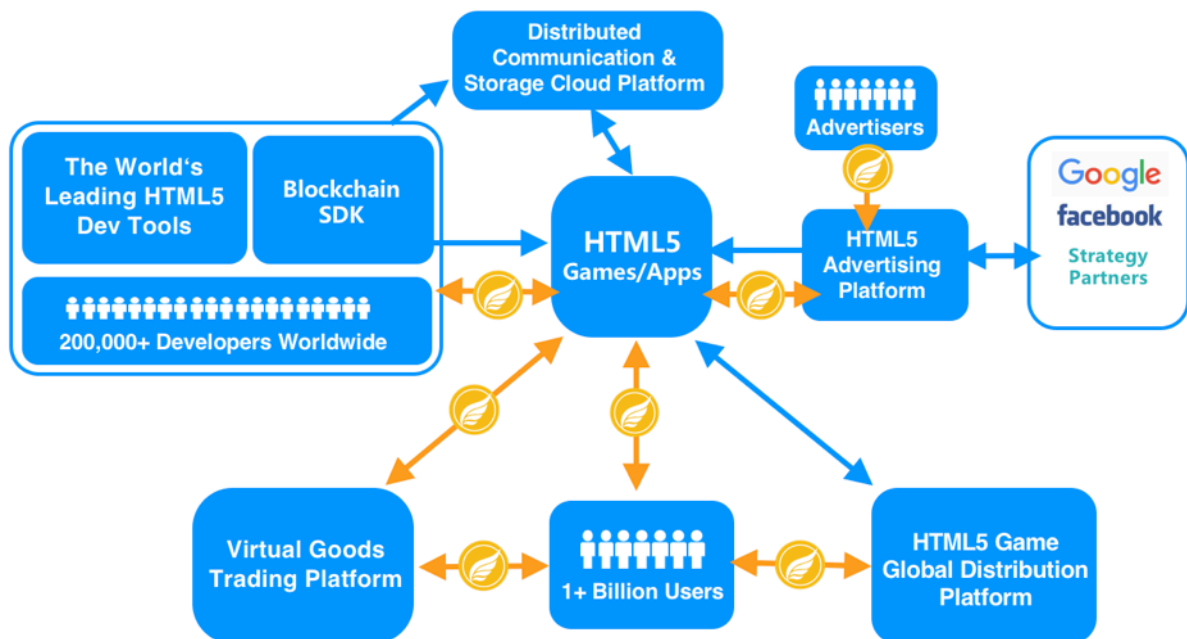

Based on the user ecosystem of the Egretia Network, there is the aim of forging a new virtual currency token that can be used in all content powered by the Egret Engine: **Egreten**.

- The ecosystem will provide well-established tools + SDKs for the blockchain community and developers to design and build applications and products.
- Users can use Egreten as the currency to buy in-game items, pay for content, etc.
- Users can use Egreten to take part in lotteries, discounts, and other promotions on the Egretia Network across the world.
- Through the Egretia Network, users can participate in crowdfunding of games which they support through the usage of Egreten, and potentially receive Egreten incentives.
- Developers and content publishers can use Egreten to advertise their products and services on the advertising platform of the Egretia Network.

- Distributors of content and users from the media industry can obtain Egreten through content distribution, advertising, etc.
- An Egreten digital wallet is created based on the unique token passports of users, in order to ensure safe storage of the virtual assets, goods, crowdfunding rewards, platform incentives, etc of each user.

Throughout the ecosystem, it is envisaged that more than 200,000 developers worldwide would be able to use the Egretia Blockchain SDK to rapidly develop HTML5 blockchain games and applications. This will increase the reach of Egreten to over a billion users, the token will be circulating in all areas of HTML5 content, virtual goods platforms, advertising platforms, and communities.

( represents the flow of tokens)

In particular, you understand and accept that Egreten:

- (a) is non-refundable and cannot be exchanged for cash (or its equivalent value in any other virtual currency) or any payment obligation by the Foundation or any affiliate;
- (b) does not represent or confer on the token holder any right of any form with respect to the Foundation (or any of its affiliates) or its revenues or assets, including without limitation any right to receive future dividends, revenue, shares, ownership right or stake, share or security, any voting, distribution, redemption, liquidation, proprietary (including all forms of intellectual property), or other financial or legal rights or equivalent rights, or intellectual property rights or any other form of participation in or relating to the Egretia Network, the Foundation, the Distributor and/or their service providers;
- (c) is not intended to represent any rights under a contract for differences or under any other contract the purpose or pretended purpose of which is to secure a profit or avoid a loss;
- (d) is not intended to be a representation of money (including electronic money), security, commodity, bond, debt instrument or any other kind of financial instrument or investment;
- (e) is not a loan to the Foundation or any of its affiliates, is not intended to represent a debt owed by the Foundation or any of its affiliates, and there is no expectation of profit; and
- (f) does not provide the token holder with any ownership or other interest in the Foundation or any of its affiliates.

Egreten shall be issued and sold by the Distributor, which shall be an affiliate of the Foundation. The contributions in the token sale will be held by the Distributor (or its affiliate) after the token sale, and contributors will have no economic or legal right over or beneficial interest in these contributions or the assets of that entity after the token sale. To the extent a secondary market or exchange for trading Egreten does develop, it would be run and operated wholly independently of the Foundation, the Distributor, the sale of Egreten and the Egretia Network. Neither the Foundation nor the Distributor will create such secondary markets nor will either entity act as an exchange for Egreten.

Chapter 3

HTML5 Blockchain Engine & Platform

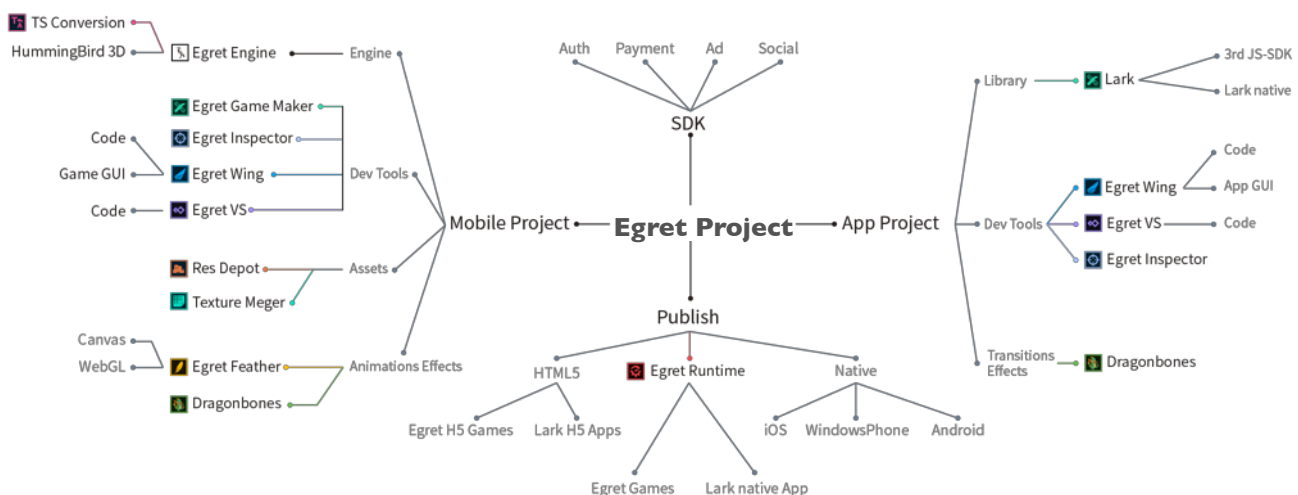

- 3.1 Key Products and Services
- 3.2 Egretia Features
- 3.3 Egretia Core Product Architecture
- 3.4 Egretia DApp Case

HTML5 Blockchain Engine and Platform

3.1 Key Products and Services

The World's First HTML5 Blockchain Game Development Workflow

Egret Technology, the strategic partner of the Egretia team, have spent four years focusing on HTML5 workflow development. The workflow includes 14 products such as the engine itself, an IDE visual editor, animation tools, cross-platform packaging tools, etc. All tools are cross-platform and support both Windows and Mac.

For more information, please visit the Egret Technology website: <https://www.egret.com/products/>

Existing development workflows allow developers and designers to:

- Efficiently edit and debug code,
- Visually adjust UI interface,
- Easily create cross-platform animations and interactive media content,
- Publish HTML5 content as iOS or Android apps via the packaging tool.

The existing development suite will be used to tightly integrate the blockchain interface layer, such that all HTML5 games can easily support the blockchain. Through the proven development workflows, developers can quickly create HTML5 games and applications that provide blockchain features such as unified digital wallet passports, smart contracts, and transactions.

The World's Largest HTML5 Blockchain Platform: Egretia

The platform of the Egretia Network includes a development workflow based on blockchain technology, four core products and an incubator, providing comprehensive blockchain solutions and services for players, content providers, channels and advertisers, allowing for creation of an inter-connected ecosystem.

Not only can developers create blockchain applications quickly with the development suite of the Egretia Network, but they will also receive complete services through the platform, such as game distribution, advertising, trading, storage, and communication service.

Egretia Blockchain Platform Architecture

Blockchain Game Dev Workflow: The world's first complete HTML5 blockchain engine and development kit, will give developers the power to quickly and efficiently develop blockchain games and applications.

Distributed Communications and Storage Platform : The platform will leverage the node model of blockchain, providing decentralised data communications and storage solutions.

Game Distribution Platform : This platform is the official DApp of the Egretia Network: Players can obtain Egreten through the app, play HTML5 games on this platform, make payments via Egreten. Through the Proof-of-Game (POG) mechanism, players can obtain Egreten incentives through playing or sharing games with friends. Users of the Egretia Network and/or holders of Egreten which did not actively participate will not receive any Egreten incentives.

Virtual Goods Trading Platform : Using Egreten, all players in the games of the Egretia Network can trade their virtual goods on this platform.

Egretia Ad Platforms : A precision advertising system, based on blockchain KYC principles, smart contracts, and platform digital tokens.

Egretia Incubator : The incubator on the Egretia Network supports game development teams and individuals, creating a bridge between players and developers.

3.2 Features of the Egretia Network

Self-developed Public Chain

The Egretia Network will include a self-developed, efficient public chain based on the DPoS (Delegated Proof of Stake) consensus mechanism, aimed at optimising HTML5 game performance. Through the blockchain interface layer, in combination with the Egret engine tools, developers can quickly create blockchain-based DApps.

Consensus Mechanisms

The public chain of the Egretia Network will be using a DPoS (Delegated Proof of Stake) as consensus mechanism.

The DPoS mechanism is similar to a board vote, where holders of coins cast a certain number of nodes, using the mechanism for verification and bookkeeping. DPoS can significantly reduce the number of participating nodes for verification and bookkeeping, it is designed to be able to achieve consensus verification in a second. For the avoidance of doubt, token holders which have delegated block verification and bookkeeping to the nodes would not receive incentives based on their token holdings only and without further contributing resources to the network; only participating nodes which have contributed computing resources for block verification and bookkeeping would be entitled to receive token incentives.

The stability of DPoS mechanism has been verified in BTS, EOS and other projects.

High-performance

The public chain of the Egretia Network is a public chain with high concurrent processing power, where performance is optimised for the needs of the game industry. It is designed to have a fast TPS (Transaction Per Second) rate. Nonetheless, in blockchain technology, an "impossible triangle" exists, meaning that scalability, decentralisation, and security cannot be achieved at the same time.

Using a DPoS mechanism to greatly increase scalability, more than 2,000 transactions per second could be supported in the initial test chain. In the future, the TPS will be increased according to business needs.

Real-time Parameter Adjustment

The Egretia Network can modify system parameters without bifurcation: Instead, the Egretia Network will be able to change blocktime, blocksize, transaction fee etc. via voting.

The Egretia Network can modify the system parameters without bifurcation: Instead, the Egretia Network will be able to realise a dynamic adjustment of parameters such as blocksize, output speed, and handling fee through voting method based on consensus.

For example: A current blocktime of 3 seconds, can be dynamically adjusted to 1 second; or a current blocksize of 2M, can be dynamically adjusted to create larger blocks, such as 8M.

For the avoidance of doubt, ultimately community members are not connected with the Foundation (or its affiliates) in any manner, and the assets and funds of the Foundation (or its affiliates) remain under the control of the relevant Board of Directors who shall exercise independent judgement and apply them to achieve the Foundation's objects. The right to vote does not entitle Egreten holders to vote on the operation and management of the Foundation (or its affiliates) or their assets, and does not constitute any equity interest in the Foundation (or its affiliates).

Convenient and Efficient Development Suite

The proven tools of Egret lays a solid foundation for the blockchain project of the Egretia Network, making blockchain application development simple, convenient and efficient.

Support Mainstream Languages and Frameworks

The development suite integrates the support for JavaScript, TypeScript, HTML, CSS, Node.js, through the extensions, it can easily support more languages and frameworks, such as C #, Go, C++, AngularJS, React and so on.

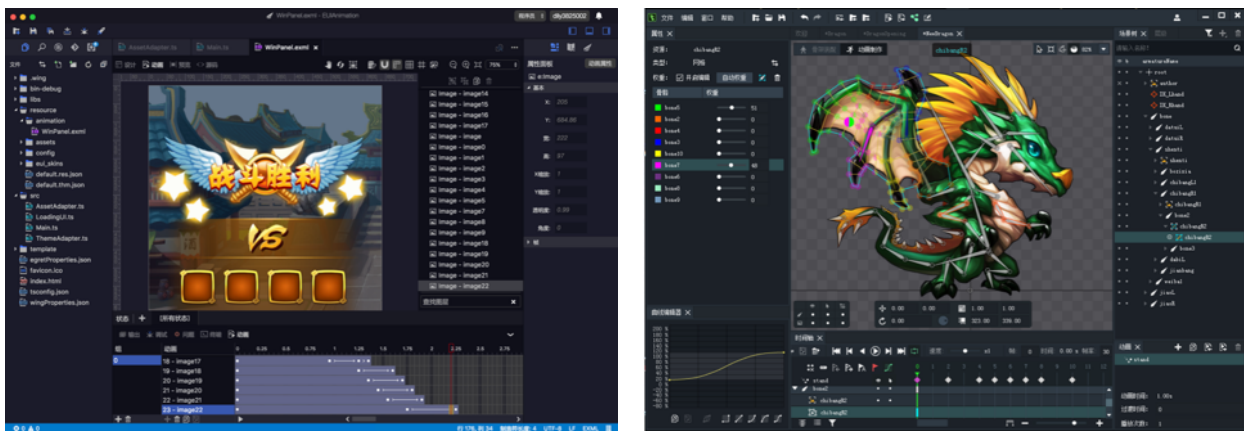

Smart Coding Assistance

Smart Coding Assistance will provide major languages with intelligent code completion, real-time error feedback, reference search, jump to definitions, and other functions, to help developers more quickly program.

Built-in Complete Game Development Workflow

Integration of visual game development environment; covering the entire development process (developing, debugging, publishing, packaging); in addition, resource management, particle editing, animation editing, cloud publishing and other

extensions are available, thus making the experience of developing games friendlier and smoother.

The interfaces of Egret Wing IDE and DragonBones animation tool

Egretia SDK

The Egretia blockchain SDK will be provided with engine and tools, which will allow all HTML5 games to easily access the blockchain. Developers can quickly create HTML5 games and applications that provide blockchain capabilities such as digital wallet, smart contracts, etc.

- Accessing the blockchain through a few lines of code,
- Storing the key information of users on the blockchain with KYC (Know Your Customer) certification,
- Providing data storage, data communication and authentication services,
- Easy access to digital wallet and create smart contract,
- Using digital token SDK for virtual goods trading in games.

Digital Virtual Currency Token: Egreten

The global gaming market size in 2017 is over 100 billion dollars, but there isn't a way to connect different games, each game is connected to its own independent economy.

The native digital cryptographically-secured utility token of the Egretia Network (**Egreten**) is a major component of the ecosystem on the Egretia Network, and is designed to be used solely as the primary token on the network. Egreten will initially be issued by the Distributor as ERC-20 standard compliant digital tokens on the Ethereum blockchain, and these will be migrated to tokens on the Egretia blockchain when the same is eventually launched.

Egreten is a non-refundable functional utility token which will be used as the unit of exchange between participants on the Egretia Network. The goal of introducing Egreten is to provide a convenient and secure mode of payment and settlement between participants who interact within the ecosystem on the Egretia Network. Developers can easily combine Egreten with their own games, and players can safely and efficiently conduct virtual goods trading.

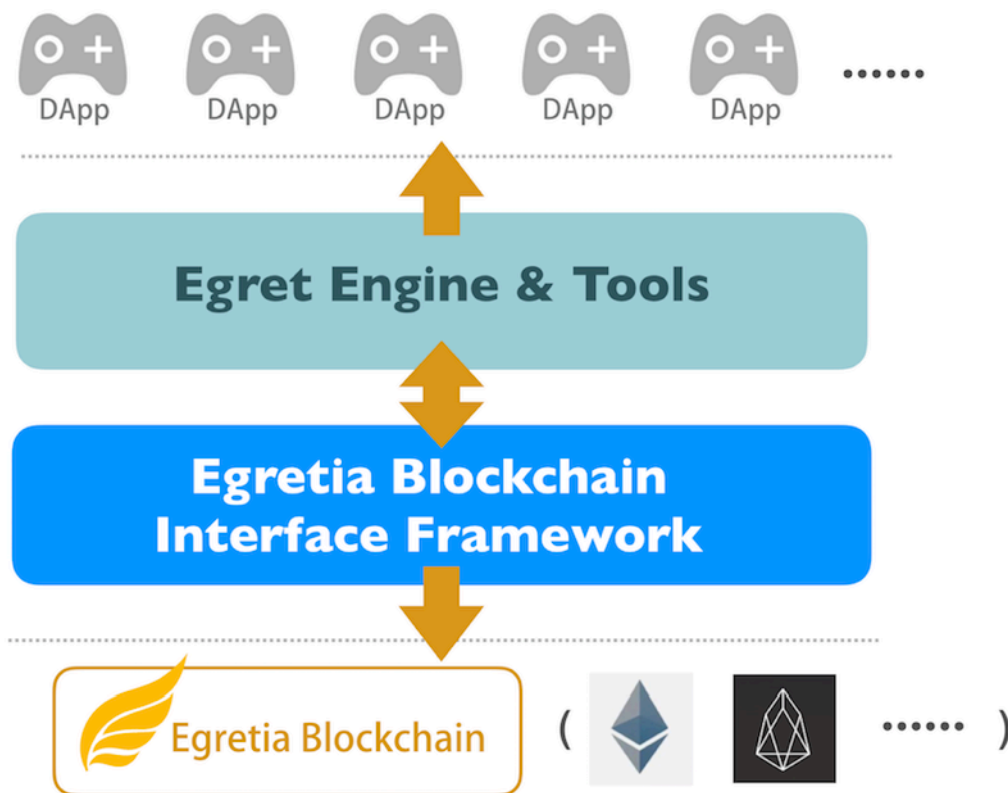

Egreten does not in any way represent any shareholding, participation, right, title, or interest in the Foundation, its affiliates, or any other company, enterprise or undertaking, nor will Egreten entitle token holders to any promise of fees, dividends, revenue, profits or investment returns, and are not intended to constitute securities in Singapore or any relevant jurisdiction. Egreten may only be utilised on the Egretia Network, and ownership of Egreten carries no rights, express or implied, other than the right to use Egreten as a means to enable usage of and interaction with the Egretia Network.

Wallet

Both game developers and gamers will be able to manage Egreten through their wallets. Users will be provided with a low-threshold, high-security digital wallet, making the Egretia Network a safe payment platform for all HTML5 blockchain applications. Currently, PC, mobile, and browser versions of the wallet are being developed.

Scalability, Supporting Mainstream Public Chains

From a long-term view, the blockchain framework will not only support the native chain of the Egretia Network, but will also be extended to support Ethereum, EOS and other public chains, so that all HTML5 developers can efficiently create blockchain-based games and applications.

Open Source

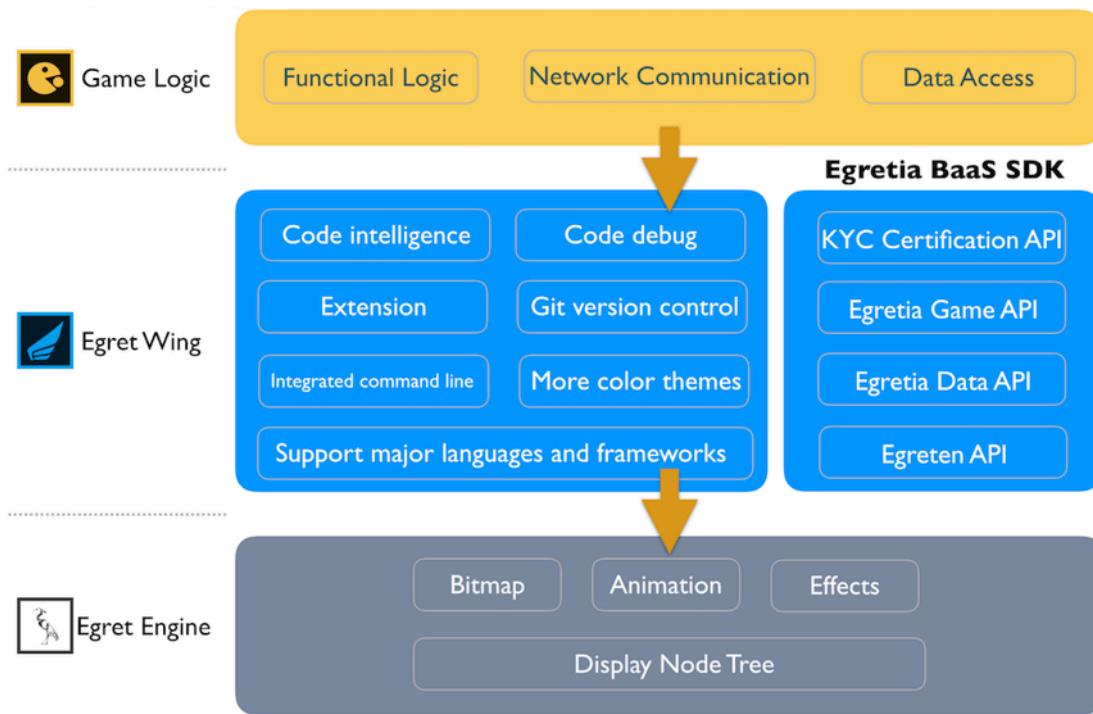

All Egretia-related code will be completely open source on Github.

3.3 Egretia Core Product Architecture

HTML5 Blockchain Engine

The content powered by Egret Engine accounts for 75% of the HTML5 market in China, with more than 200,000 developers worldwide.

The Egret Engine will provide the Egretia BaaS SDK, which will allow easy access to blockchain for all Egret games. Through the Egretia BaaS SDK, developers can create blockchain games or migrate existing Egret games to blockchain games in an easy way.

HTML5 Blockchain Engine Architecture

As shown above in the diagram, the bottom part represents the Egret Engine. Using the Egret IDE tool “Wing”, developers can quickly develop HTML5 games. As long as developers add the Egretia BaaS SDK while creating a new project, blockchain-related APIs will be easily accessible.

The Egretia BaaS SDK and the included APIs are as follows:

Egretia Game API

With blockchain popularity rapidly increasing, many developers are eager to “blockchain-ise” their games. However, as a matter of fact, blockchain technology is fairly complicated. At the same time, not all developers have sufficient time to fully leverage the underlying technology. The Egretia Game API is a solution through which developers can obtain easy access to blockchain.

Through the Egretia Game API, HTML5 games can be “blockchain-ised” with just a few lines of code. As you can see from the image above, by adding the Egretia BaaS SDK into games, and then calling the API interface in accordance with official

documentation tutorials, developers will be able to combine HTML5 games with blockchain technology.

KYC Certification

With the help of KYC (Know Your Customer) information, user information is encrypted and stored on the blockchain. Due to the anonymity and traceability of blockchain, it is safe and reliable to store user information on the Egretia Network. Using the KYC blockchain ID, users will only have to sign up once for all games built by HTML5 Blockchain Engine.

Egretia Data API

The game industry has been criticised because of opaque data, some developers control the falling probability of virtual goods in order to increase their revenue. Although the entire industry has put a lot of effort into solving the problem, for example, a group of developers has made public the falling probability of virtual goods, game players still feel sceptical about game developers.

Through the Egretia Data API, developers can store the core data logic of games and applications in the Egretia Network, thus realising data storage account disclosure and process verification: this is making the data open, fair, and transparent.

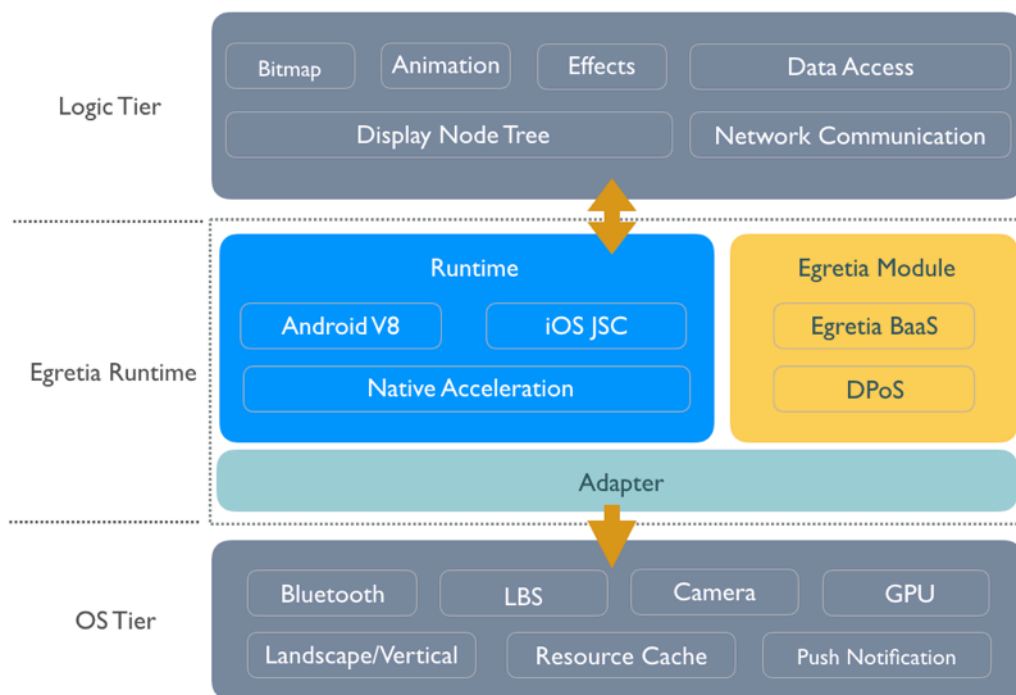

For example, game developers write the core data logic, game transaction information, and game equipment values onto the blockchain, so that players can view the game numerical information at any time. This helps solving the mutual trust problem between game developers and players.

Egreten API

As the API for the virtual currency ecosystem on the Egretia Network, virtual in-game items can be placed on the trading platform.

Egretia Runtime

Egret Runtime is an accelerator component developed by Egret team to enhance the HTML5 game performance and can be embedded as a seamless extension into a browser or other applications on mobile devices. By using Egret Runtime, game developers can ignore the differences between diverse operating systems, browsers, and terminals so that HTML5 games can run more efficiently with amazing performance. In addition, runtime also has access to mobile device hardware, improving the gaming experience. By the end of 2017, Egret Runtime has been installed 1 billion times.

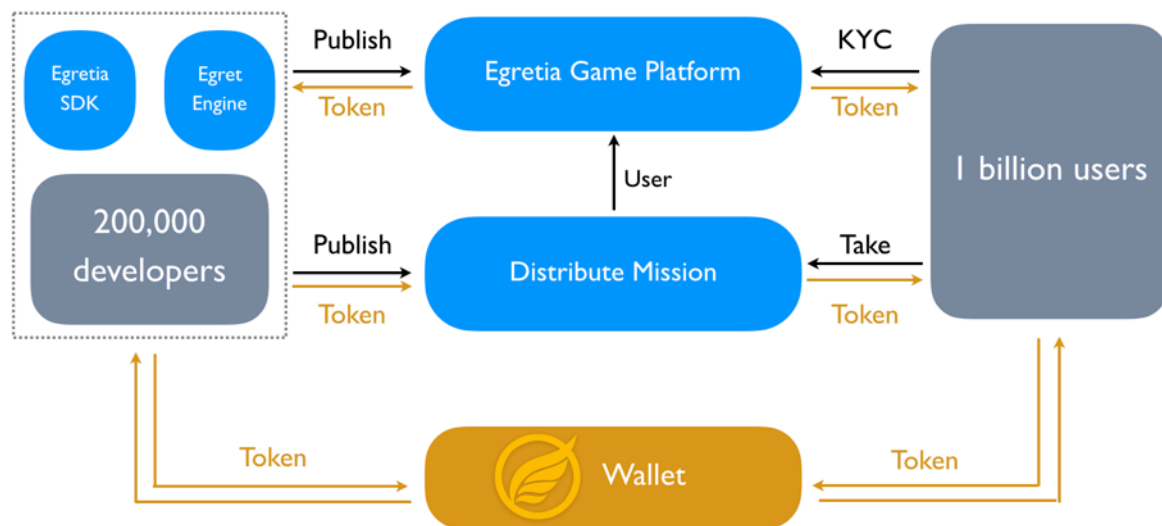

Egretia Runtime Architecture

The Egretia Runtime is a completely upgraded version of the Egret Runtime. Not only does it fully support the functions of the original runtime, it also integrates the Egretia blockchain modules to make for more secure core functions at the lower layer of the application. The Egretia BaaS Module, which allows developers to easily call the blockchain interface of the Egretia Network, also fully supports the DPoS mechanism, realising ledger and data exchange on the basis layer of the Runtime.

Egretia Game Global Distribution Platform

The Open Platform of the strategic partner of the Egretia team, Egret Technology, is the largest HTML5 gaming platform in the world. It has more than 2,000 distribution

channels and more than 65,000 HTML5 games, with 40 million monthly active users. Leveraging the new business mode revolution brought by blockchain technology, the Egret Open Platform will be fully upgraded to a decentralised HTML5 gaming distribution platform, supporting HTML5 developers and reaching HTML5 players worldwide.

Egretia Game Platform Architecture

Egretia Game Platform

As shown above, with the Egret Engine and the Egretia BaaS SDK, game developers have easy access to blockchain. Players can obtain a unique ID through KYC, and use it when playing all the games on the platform of the Egretia Network.

Since the Egretia Network adopts DPOS and PoG to implement distributed ledger and data exchange mechanisms, the longer the players will stay in games, the greater the PoG values will be. Depending on the duration of the game and the level of experience, players can obtain various amounts of Egreten, which will enable them to buy virtual goods in the game.

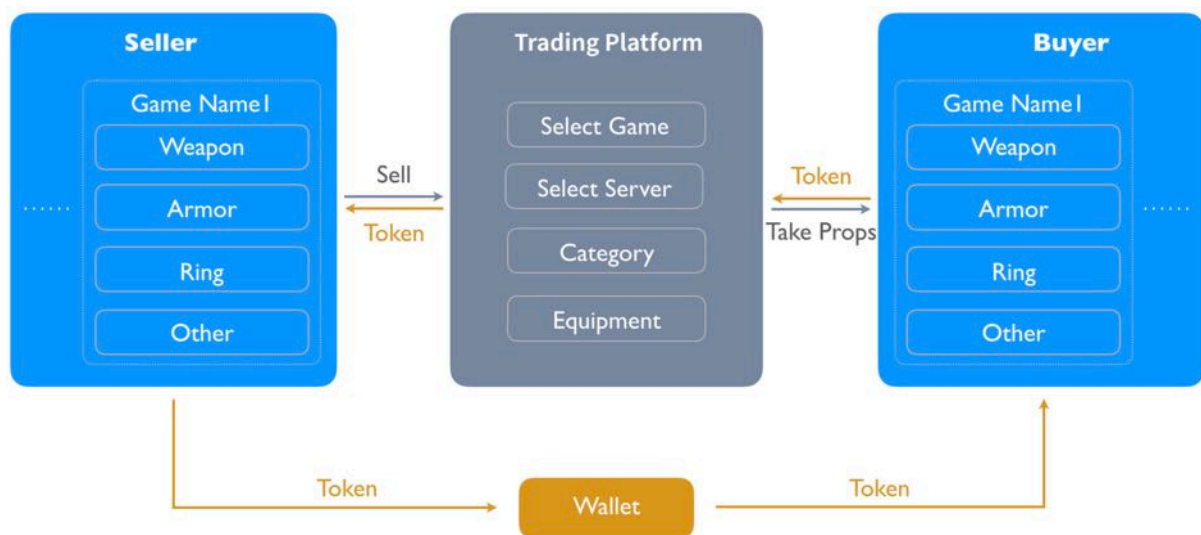

Game developers may obtain Egreten by operating games.

Egretia Game Distribution Mechanism

The game platform on the Egretia Network is a decentralised HTML5 game distribution platform. Developers can independently launch HTML5 games and offer tasks encouraging players to spread games. After completing the promotion tasks, players will obtain some Egreten as an incentive. This way, developers will be able to attract many players, and those players are able to obtain virtual currency, thus forming a healthy ecosystem.

The Virtual Goods Trading Platform

Players have always faced the problem how to ensure the value of virtual goods and the security of personal information in virtual goods transactions. The Egretia virtual goods trading platform can help to solve this problem.

Trading Platform Architecture

As pictured above, players can sell virtual goods of a certain game on the trading platform. After selecting the game, a game server, the virtual goods category, and specific items, virtual goods can be sold in exchange for Egreten.

On the other hand, players can spend Egreten buying virtual goods on the trading platform.

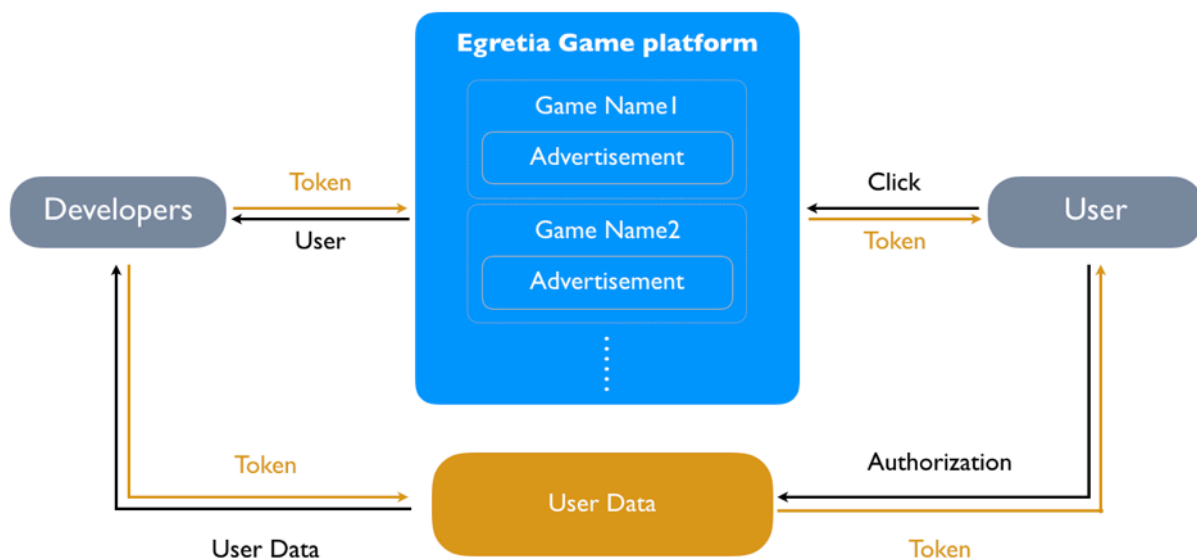

HTML5 games connect the in-game virtual goods to the trading platform via the Egretia BaaS SDK. Traditional virtual goods and account trading model are lacking

mutual trust at its foundation. Based on the smart contract mechanism of blockchain, both buyers and sellers can conduct transactions without concerns and will not need any guarantee from a third party.

Based on the traceability feature of blockchain, traders can view historical transaction records of virtual goods at any time. Besides, the anonymity of blockchain can well protect the privacy of buyers and sellers.

Decentralised Advertising Platform

An advertising platform based on the Egretia Network will be created. Based on KYC principles, the Egretia Network is capable of capturing user profiles accurately so that ads that users are interested in can be delivered. On the other hand, the token-based advertising platform will be helpful to Egreten circulation.

Blockchain Advertising Platform

As shown above, decentralised blockchain-based advertising is a good solution for the shortcomings of traditional advertising.

- Advertisers can serve ads using the Egreten virtual currency on the Egretia Network.
- Developers integrate ads with content through the tools and SDK on the Egretia Network, which will allow them to obtain Egreten.

- Developers can also spend Egreten paid by users upon delivering ads in order to attract more users.
- Based on KYC principles, the advertising platform can protect the privacy of users while getting user data, effectively pushing content that users are really interested in, greatly reducing the costs for advertisement.
- Players can obtain Egreten by forwarding ads.

As the first HTML5 blockchain platform, the Egreten team is also actively communicating with overseas partners such as Facebook, in order to jointly embrace the future of blockchain together.

Distributed Communication & Storage Cloud Platform

The HTML5 Distributed Communication and Storage Service is powered by blockchain technology to provide the decentralised server-side, distributed communication and storage.

The Egretia Network will cooperate with more third-party public chains as well as technology service providers, offering developers more comprehensive distributed communications & storage services.

The more developers and content, the more widely distributed server nodes. The faster storage of data and files being read, the quicker the client and server-side communications.

By calling the SDK provided, developers can simply access communication services on the Egretia Network, realising online multiplayer, data & file storage, back-end

game logic customisation. Usability, low latency, high availability, expansibility, customisability, are its characteristics.

In addition to helping developers create a game from its concept, it is easy to migrate a single-player game into a cross-regional, cross-server, low-latency online game based on the technology of the Egretia Network, thus greatly reducing the cost of game development.

Multi-nodes, low latency

Decentralised worldwide server nodes and the original "server frame synchronisation" technology, will make for a quicker and more stable transmission of game data. In the meantime, to meet the needs of large multi-player online games, full advantage will be taken of the rich experience the Egretia team has with building platforms and adopting a "deep coupling" approach. Information that does not affect fairness will be managed in a traditional manner and core data will be processed through smart blockchain-based contracts. Seamless coordination ensures fairness and a smooth gaming experience.

Quick Match

Based on distributed back-end communications, a flexible matching mechanism will be meeting the majority of the matching requirements under different customisable rules. This will help in enriching the gameplay, helping more players build connections, and truly achieving the state of "global players using the same server".

Quick Access

Modularising the game lobby, room and interactive processes, the needs of developers will be taken into consideration, combining front-end engine and tools for developers to quickly access and develop games.

The Server-Side Logic of "Smart Contract" Management

Aside from basic networking capabilities, game developers will also be provided with a server-side framework based on smart contracts, the Egretia Backend Logic Framework. Developers will be able to extend server networking capabilities to implement the customised server-side game logic. Because the server-side logic is based on the blockchain of the Egretia Network and managed through smart contracts, the game logic is open and fair, which can effectively prevent plug-ins.

3.4 Egretia DApp Case

Decentralized HTML5 Game Distribution Platform

The decentralised game distribution platform is currently under development, all the games are developed based on the blockchain of the Egretia Network, accessing the KYC authentication system, the digital tokens, the data storage module and other functions of the Egretia Network.

On this game platform, players can not only play all HTML5 games, but also obtain digital virtual currency tokens through playing games, while at the same time gaining token incentives through completing the tasks in games. The assets of all players are securely stored in an Egretia wallet.

Because each user on the game platform has a unique passport, accurate user profiles can be obtained based on historical data, thus matching players according to

their interests. Thus the platform of the Egretia Network is not only a game platform, but also a social platform.

Professional Operation Team and Incubator

The professional gaming operations team of the Egretia Network, with its outstanding global promotion capabilities in mobile games and applications, will focus on global promotion of premium games and applications based on the blockchain of the Egretia Network. Cooperative agreements have been made with a number of content providers worldwide to develop quality games and apps based on the Egretia Network. At the same time, the native incubator will support outstanding content or technical teams, jointly growing with them together.

4.2 About Egret Technology

Partners

4.1 About Egret Blockchain Lab

The strategic partner of the Egretia team in China, Egret Technology, is the world's leading provider of HTML5 industry solutions, and the development partner of the Distributor. As a technology-driven company, Egret Technology has always embraced cutting-edge technology with an open mind and is committed to improving the industry.

Egretia Blockchain Lab, with core members from Qualcomm, Adobe, NVIDIA, is devoted to combining blockchain technology with the leading HTML5 engine and tool technologies of Egret, aiming for applying blockchain technology towards its vertical industry. Through the existing global developer ecosystem, promoting the popularisation of blockchain applications, covering over 1 billion users, it has practical and far-reaching significance to pushing forward the development of the industry.

4.2 About Egret Technology

- Founded in 2014, has R&D centers in Beijing and Shanghai.
- W3C member, contribute to Web Standard Development.
- Core tech team comes from Adobe Asia R&D center, having over 15 years professional technologies experience.
- The largest HTML5 development platform and over 75% marketing penetration rate in China.
- More than 200,000 developers worldwide, with HTML5 content powered by its workflow covering 1 billion mobile devices.
- Investors: GuoJin Capital, Shunwei, XiaoMi and SIG for round A financing; Matrix, Shenzhen Capital for round B financing.

- Expanding to the global market, exploring the monetisation and business model of cloud service and big data.
- In partnership with world-renowned companies

Egret Technology independently developed 14 products such as the Egret Engine, Egret Runtime, DragonBones and Egret Wing, creating the first complete HTML5 development workflow in the world. For more information, please visit the website of

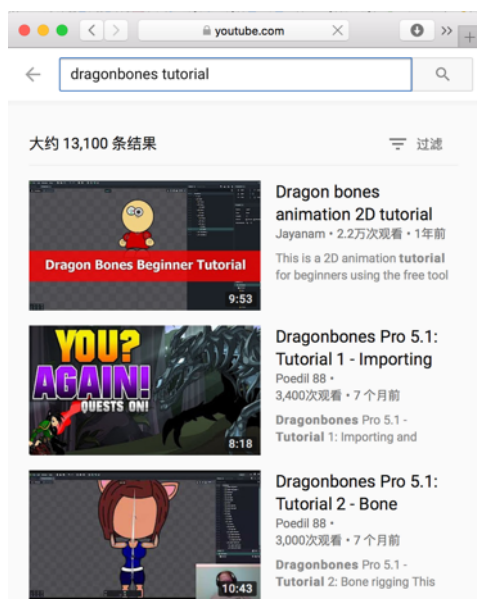

Egret Technology: <http://www.egret.com>

CCTV reported DragonBones, the skeletal animation software of Egret Technology, has become the international animation standard.

Related report:

<http://www.techweb.com.cn/onlinegamerim/2017-03-22/2503768.shtml>

There are more than 10,000 tutorials of Dragon Bones on Youtube, all of which are self-submitted and shared by the global developers, proving Dragon Bones immense popularity.

Using the Egret engine and Egret tools,

developers have created products that are representing milestones in the history of HTML5:

- Catch the Crazy Cat, the first popular HTML5 game on Wechat, gaining more than 100 million users within 3 days.

- Yugong Yishan, the first HTML5 paid game, with total users of more than 50 million.

- Legendary world, the first game with 10 million Yuan monthly revenue in HTML5 history

- Juezhan Shacheng, the first game with over 30 million Yuan monthly revenue in HTML5 history.

- Legend is coming, the first game with over 100 million Yuan monthly revenue in HTML5 history.

Another reason why the team chose Egret Technology is its good developer ecosystem. Every year Egret Technology holds a HTML5 developer conference, with thousands of people attending, proving developer loyalty and enthusiasm. It is believed that based on the huge developer community of Egret, the HTML5 blockchain technology of the Egretia Network will be quickly deployed in a variety of games and applications and gain popularity.

2017.12.28

微信推出“小游戏”第一周

截至 2018.1.4 白鹭引擎数据变化如下:

“微信小游戏”创建

2921

After Tencent Wechat launched its mini-game, Egret Technology announced that its tools would start supporting the development of mini-games. In just a week, 2921 mini-game projects were created through Egret tools.

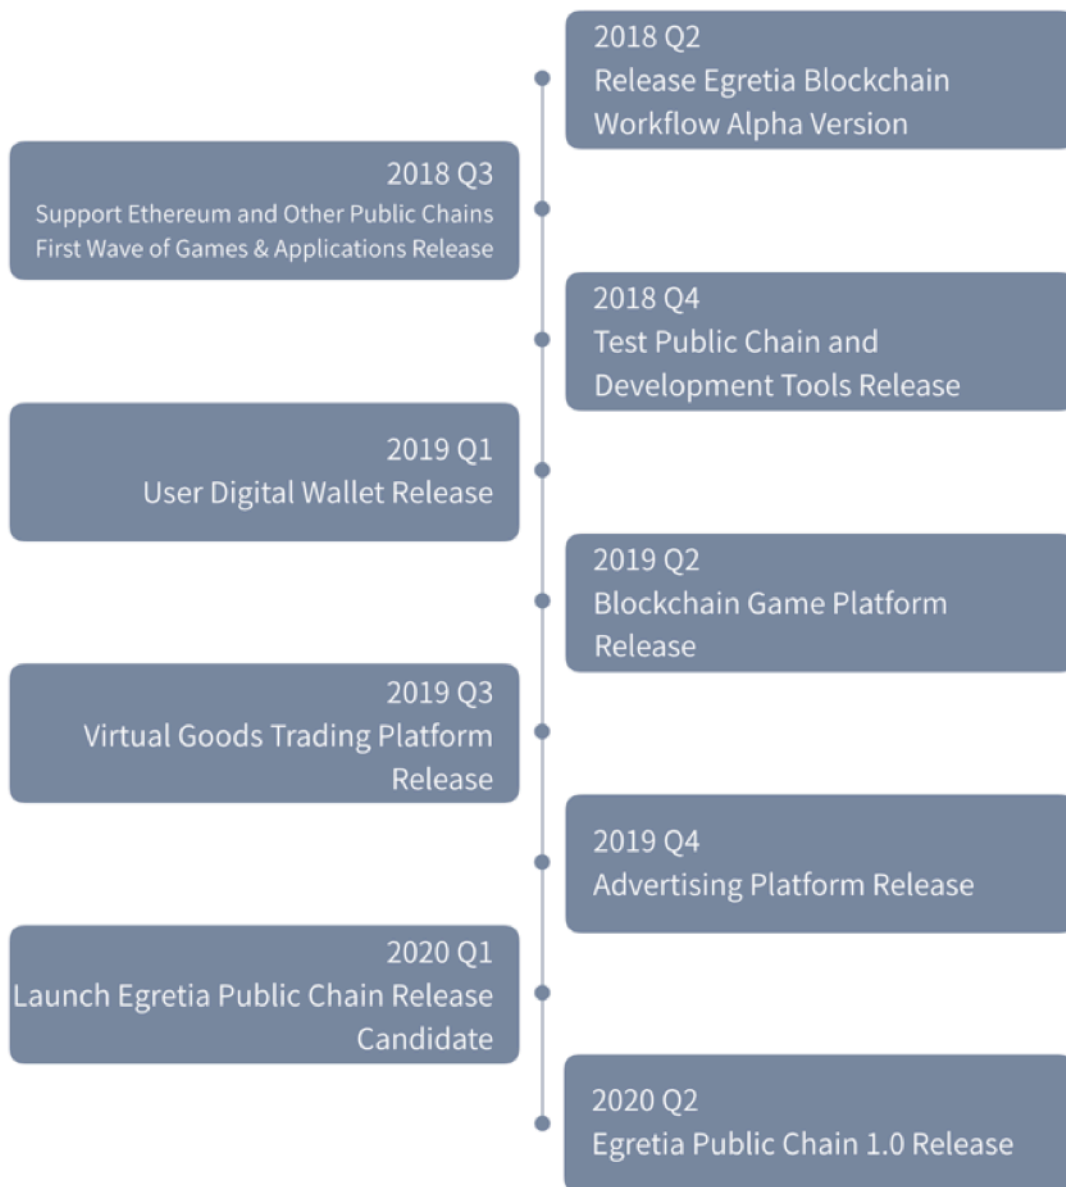

Chapter 5

Roadmap and Milestone

Roadmap and Milestone

The professional engine tools and blockchain technology team of the Egretia Network will ensure milestones will be delivered on time.

Risks

You acknowledge and agree that there are numerous risks associated with purchasing Egreten, holding Egreten, and using Egreten for participation in the Egretia Network. In the worst scenario, this could lead to the loss of all or part of the Egreten which had been purchased.

1. Uncertain Regulations and Enforcement Actions

The regulatory status of Egreten and distributed ledger technology is unclear or unsettled in many jurisdictions. The regulation of virtual currencies has become a primary target of regulation in all major countries in the world. It is impossible to predict how, when or whether regulatory agencies may apply existing regulations or create new regulations with respect to such technology and its applications, including Egreten and/or the Egretia Network. Regulatory actions could negatively impact Egreten and/or the Egretia Network in various ways. The Foundation (or its affiliates) may cease operations in a jurisdiction in the event that regulatory actions, or changes to law or regulation, make it illegal to operate in such jurisdiction, or commercially undesirable to obtain the necessary regulatory approval(s) to operate in such jurisdiction. After consulting with a wide range of legal advisors and continuous analysis of the development and legal structure of virtual currencies, the Foundation will apply a cautious approach towards the sale of Egreten. Therefore, for the token sale, the Foundation may constantly adjust the sale strategy in order to avoid relevant legal risks as much as possible. For the token sale the Foundation is working with Tzedek Law LLC, a boutique corporate law firm in Singapore with a good reputation in the blockchain space.

2. Inadequate disclosure of information

As at the date hereof, the Egretia Network is still under development and its design concepts, consensus mechanisms, algorithms, codes, and other technical details and parameters may be constantly and frequently updated and changed. Although this white paper contains the most current information relating to the Egretia Network, it is not absolutely complete and may still be adjusted and updated by the Egretia team from time to time. The Egretia team has no ability and obligation to keep holders of Egreten informed of every detail (including development progress and

expected milestones) regarding the project to develop the Egretia Network, hence insufficient information disclosure is inevitable and reasonable.

3. Competitors

Various types of decentralised applications are emerging at a rapid rate, and the industry is increasingly competitive. It is possible that alternative networks could be established that utilise the same or similar code and protocol underlying Egreten and/or the Egretia Network and attempt to re-create similar facilities. The Egretia Network may be required to compete with these alternative networks, which could negatively impact Egreten and/or the Egretia Network.

4. Loss of Talent

The development of the Egretia Network depends on the continued co-operation of the existing technical team and expert consultants, who are highly knowledgeable and experienced in their respective sectors. The loss of any member may adversely affect the Egretia Network or its future development. Further, stability and cohesion within the team is critical to the overall development of the Egretia Network. There is the possibility that conflict within the team and/or departure of core personnel may occur, resulting in negative influence on the project in the future.

5. Failure to develop

There is the risk that the development of the Egretia Network will not be executed or implemented as planned, for a variety of reasons, including without limitation the event of a decline in the prices of any digital asset, virtual currency or Egreten, unforeseen technical difficulties, and shortage of development funds for activities.

6. Security weaknesses

Hackers or other malicious groups or organisations may attempt to interfere with Egreten and/or the Egretia Network in a variety of ways, including, but not limited to, malware attacks, denial of service attacks, consensus-based attacks, Sybil attacks, smurfing and spoofing. Furthermore, there is a risk that a third party or a member of the Foundation or its affiliates may intentionally or unintentionally

introduce weaknesses into the core infrastructure of Egreten and/or the Egretia Network, which could negatively affect Egreten and/or the Egretia Network.

Further, the future of cryptography and security innovations are highly unpredictable and advances in cryptography, or technical advances (including without limitation development of quantum computing), could present unknown risks to Egreten and/or the Egretia Network by rendering ineffective the cryptographic consensus mechanism that underpins that blockchain protocol.

7. Other risks

In addition, the potential risks briefly mentioned above are not exhaustive and there are other risks (as more particularly set out in the Terms and Conditions) associated with your purchase, holding and use of Egreten, including those that the Foundation cannot anticipate. Such risks may further materialise as unanticipated variations or combinations of the aforementioned risks. You should conduct full due diligence on the Foundation, its affiliates and the Egretia team, as well as understand the overall framework, mission and vision for the Egretia Network prior to purchasing Egreten.
