- Disclaimer
- We are not financial advisors

We will never advise you to buy our token or any other asset, whatsoever. Our main purpose regarding this aspect and it can easily be confused with financial advice, is to only present all relevant information about our token, or depending on circumstances, about another asset. Your investment decision, it is entirely YOUR OWN responsibility. You, as an investor, are the only one liable for the outcomes of YOUR OWN decision.

- Directors will never PM first

We will never private message you first. Considering all scams in this financial environment, we are not liable for any discussion you had, with a potential fake account that might impersonate one of the directors. Please make sure, you're talking with whom you intend and be advised, we will never PM first. This way, it is up to you, as a potential investor, to message us first.

- Roadmap is suggestive, in reality we might encounter difficulties implementing it

Roadmap represents most of our ideas, plans, strategies all organized into a chapter in this whitepaper. It is only suggestive, as reality might turn out to be different along the way, than we initially forecasted. All alterations of it will be announced beforehand, so our investors won't be surprised.

- Introduction

- Description

Do you want to explain to the next generation why the world is on fire? Why are animals being washed up on our shores every day? Why do countries have smog clouds hanging low over cities?

Madagascar aims to raise funds to help the planet gain more "time" helping to reduce global warming, pollution and climate change. For us and our future generations to come! DID YOU KNOW? Eleven percent of all global greenhouse gas emissions caused by humans are due to deforestation? This is comparable to the emissions from all the passenger vehicles on the planet. The project's first long-term goals are to plant one million trees in over 5 countries followed by saving 10,000 endangered species of animals from around the world. Marvin McMoonington spoke to the Resilientrockhopper over at team Madagascar and he said "not enough is being done to fight global warming, climate change and the pollution around the planet. Madagascar has created a charitable token that has the ability to give "time" back to the next generations of our precious planet earth and to secure the future of our animal kingdom." The team is remaining fully transparent and open to the community, that's why they have an doxxing event coming soon. More details will be released in the future as we progress through our stages. Madagascar's charitable funds Are donated via the blockchain, which means payments can be seen on the public ledger and can never be hidden. The smart contract on the blockchain has been fully audited by techrate and the Liquidity has been locked.

- Goals & vision

We don't want our younger generations to only be able to view pictures of beautiful landscapes or magnificent animals and insects. It is up to us, crypto projects of all sorts, to make use of this new efficient technology and implement it in the real business world. Our children and their children and so on, should be able to swim in oceans and rivers. They deserve all the natural wonders we have enjoyed so far as species in this vast Universe.

Unfortunately, continuing with our current consumer behavior and plowing full steam ahead with deforestation, dumping waste in the oceans and other environmentally hazardous acts we risk more than we realize and our future generations might not live in beautiful times like this one. The team at Madagascar-crypto.com are here to help change the world and the way charitable donations are used to make a difference to the planet, animal welfare and the environment. We have created a new transparent "digital" charity using blockchain. This allows any member of the public to track our data and see how charitable funds are used. We aim to finance as many as possible, NGO's, charity funds etc (e.g. anti-poachers, innovative initiatives for cleaning the oceans, tree-planting etc).

- **Wallet address, explanations and contract address**

The project Madagascar has 3 different wallets, called safes. They are connected with multi-sig technology. This way all of our decisions regarding donations, investments or salaries need 3 votes out of 4 to be executed. Our other wallets are what we call them, liquidation wallets. There are 2 wallets for each safe (6 in total) and 2 individuals liquidating on 2 different time zones.

The team wallet is where we will split the total of revenues for salaries into 4 equal amounts. Then it is up to each director's personal choice whether he'll hold his payment in \$TIME or any other currency.

The wallet address are as follows for investors to easily track any of our transactions (any transaction regarding donations/marketing will be announced:

**Charity safe:** 0x53fdb20B6641b20e6604BCbaAac840b98c3DEe6f

**Marketing safe:** 0xd805BFa24DE38c60F0EC477CBaA1c6E6441FdDA5

**Team safe:** 0x7C2f765cB5462444e3a8f1f8B428fe3f50310783

Binance hot-wallet for fiat payments: incoming (when legal company is established and corporate account created)

We also aim to have a bot that pops up a PDF containing all project's activity regarding decisions, investments etc.

## • LIQUIDATION WALLETS

### ▪ Charity wallets

## • Team

Our team is formed out of 4 directors. Any withdrawal of the members, will be announced and voted upon by the others in order to be executed. Our personal wallets are connected to multi-sig and any administrative/financial decision will be voted by all of us.

### The Directors and their roles are as following: (dev)

Chief Marketing Officer (CMO) - ***Theresilientrockhopper***

Chief Developer Officer (CDO) – ***Stunning Coua***

Chief Brand Officer (CBO) – ***Hasty Gecko also known for  
Mister Better Shiller***

Chief Social Media Officer (CSMO) – ***Friendly Fossa***

The Managers are as following: **(Admins)**

Charity Manager: **Mrs. Rockhopper**

NFT artist & pro-shiller: **Mrs. Even Better**

**Mrs Fossa**

Their assistants are as following: **(MOD's)**

- **Moore08**
- **TeryTTTT**
- **GeniusBullish**
- **TWF\_ET**
- **Luke78o**
- **luckyspades8**
- **Onlymoneyparle**
- **Mulayim\_bomba**
- **ThomasAndrianos**
- **Mister Smaller Shiller**

We aim to work in a synergic decentralized manner. We don't have a CEO officially appointed and all types of decisions are executed by our board, as a whole, through a voting system of 3 out of 4 . By synergy we mean, mainly, the Officer responsible of its field, proposes a suggestion, e.g. Rockhopper suggests a marketing campaign and then we all work on it. In addition, all other officers can also suggest marketing campaigns.

Team also planned a doxing event in the near-future. The specific details of this event are still a surprise, as it will be announced beforehand at the right time within stage 2.

**Note:** *Doxing might be delayed for stage 3 due to circumstances not anticipated.*

We have 3 ranks of members

Directors = dev

Managers = admin

Other Management posts and Assistants will open along the way serving the project's best interests. Whitepaper will be updated with any new additions.

**Note:** *New posts might open up along the way, depending on the project needs. Admins and mods might receive airdrops if the board considers it fit so, according to the work they've put in.*

Admins and mods purpose are to direct the community towards growth, positivity and clearness regarding any questions or FUD.

### • **Tokenomics, their purpose**

**BURN** will be executed manually whenever the community members achieve targets suggested by the board (e.g. refreshing dextools getting on trend, achieving a certain number of TG members and other activities that have the purpose community growth)

**10%** is taxed as following whenever investors trade:

**2% charity** – this money represents the sum we will donate

**2% reflection** – this money represents what goes back to shareholders as a reward for holding, when others sell their \$TIME tokens, they receive the amount calculated for the time they've held according to the amount they hold as well.

**2% liquidity locked** – this money will go back to the liquidity pool, so our currency will be backed by \$BNB all the time

**2% marketing wallet** – this money represents our funds destined for investments to pay marketing campaigns (influencers, tweets, giveaways etc)

**2% team wallet** – this money represents our salaries.

We don't hold initial tokens and with this tokenomics we aim to make our project last for the long-term run. As long as there's trading volume we will always have enough money to fund our marketing campaigns, donate and have our own personal gain. In this manner, we will never have major sells-off caused by investments or donations for example.

## • Description of the market and the problem

**We want to create the most efficient, innovative charitable business system that can help save the world and buy \$TIME.**

## • Financing activities which aim to solve environmental issues

These are some of the activities we intend to fund:

- ❖ Helping endangered and other animals in need
- ❖ Planting trees
- ❖ Cleaning our oceans
- ❖ Promoting Environmentally friendly alternatives
- ❖ Initiatives regarding global warming (e.g. modern projects with sustainable and innovative solutions)

## • Lack of Funds

As we know, generally people are not concerned with donations. They want to be rich themselves, to achieve their own targets and perhaps along this journey called 'life' they might donate some money as well. We, as other charitable crypto projects out there, intend to fill up this gap by charging a percentage out of each transaction. People mind their own business, trading whatever asset they desire while considerable funds accumulate which everybody agrees upon, when they've traded. It is a much more simple, efficient way to raise funds for any charitable activity.

## • Slow process of raising funds

Current general system of raising funds for charity actions, as everyone might know, is through personal direct donation. Most of the time, people do it to get tax-deduction. Our crypto-project goal regarding the process of raising funds is to make a bridge between a considerable stream of money and NGO's/initiatives that need that money. On one side we have our investors who agreed when they traded our token, that 2% goes to charity and on the other side we have different sorts of organizations we are going to fund with 'charity wallet' money.

## ▪ **How the raised funds are going to be used**

### ➤ **Marketing procedure**

#### **1st step: Conception of a campaign/s**

Team drafts multiple marketing campaigns, their costs and revenues expected

#### **2nd step: Decision process**

Shareholders vote it on TG polls and can add up their ideas to the campaigns

#### **3rd step: Final decision**

Team evaluates the additions of shareholders and decide what to add and what to not

#### **4th step: Implementation process**

Team implements marketing campaign. The team will suggest payment in \$TIME first, if not possible it will have \$BNB available as well. If \$BNB is not accepted either, we will convert the \$BNB into fiat through a Binance hot-wallet.

#### **6th step: End of the campaign, effects and expenditures.**

Team evaluates the data again. Effectiveness of the campaign and expenditures incurred.

#### **Final step: Proof**

In the form of an official announcement including all documents relevant to the campaign. (e.g. screenshots, screen-recordings etc)

**Note:** *Possible marketing campaigns may skip the procedure in order to be implemented ASAP, depending on circumstances. Shareholders will be announced before and the transactions will also be open to the public.*

## ➤ **Donation procedure**

### **1st step:** *Searching and finding of viable projects*

We search for multiple projects/charity funds/ NGO's regarding environmental health and global warming. We will also announce the search in our Telegram community so people can suggest viable projects. We are open to anything related to our goals.

### **2nd step:** *Choosing of a project*

After assessing all options available, we will pick together with the community a winner project.

### **3rd step:** *Deciding on the exact allocation*

We decide on the amount we should allocate to the specific cause based on the project's needs and impact. Community suggestions are then again, welcomed.

### **Final step:** *Proof*

We send proof of payment to the group in the form of announcement.(e.g. screen recording/screenshots)

## ➤ **Salaries of the board**

The board has a 2% out of each transaction, this will be our personal gain. We don't hold any initial token. The money will be split 6 ways and it is up to each director's personal decision whether he holds his personal payment in \$TIME or \$BNB.

**Note:** *Admins and mods might receive airdrops as well, depending on circumstances.*

## ➤ The Roadmap

### ▪ Short-term goals, long term goals

#### ○ **Short-term goals:**

*(targets to be achieved in the first quarters of our projects)*

- ❖ Donate 100,000\$ to serious issues our planet faces
- ❖ Listings and exchanges
- ❖ Dapps: Spin the wheel, matchers, Lottery
- ❖ Maddyswap (with staking function available, the staked token can be listed on big exchanges due to the fact its tax-free)
- ❖ Eth to bsc Bridge
- ❖ Burns in exchange for community tasks
- ❖ Many surprise unprecedented marketing/development/charity ideas in order to scale up the Madagascar project.
- ❖ Fully functional and legal crypto casino registered under Curacao license

#### ○ **Long-term goals:**

*(targets to be achieved later on our project's journey)*

- ❖ To plant 1 MILLION trees
- ❖ Help over 10,000 endangered species of animals
- ❖ Donate over 10,000,000\$ to different activities regarding our planet's health.
- ❖ Our own blockchaina
- ❖ Have a swap token tax-free listed on big exchanges (e.g. Binance)
- ❖ Mobile app
- ❖ Metaverse, NFT

## ▪ **Administrative activity and decisions precisely forecasted into quarters:**

**Stage 1** (creation) has started on 1<sup>st</sup> July, 2021, and it will end the day we launch on pancakeswap, 30th July, 2021

- Administration's structure (done)
- Theme of token (done)
- Multi-sig wallets (done)
- Customized contract, no fork (done)
- Listing onCoinGecko, Coinmarketcap, Blockfolio etc (done)
- Tech-rate audit (done) other audits incoming as well
- Multiple influencers videos (done)\
- Bots for multiple uses (done)
- Cultural management of the community e.g. stickers, videos, animations (done, but more incoming)
- Legal entities in the following countries: Malta and UK (incoming)
- Binance corporate account, for hot-wallet where the board can convert crypto to fiat for donations, investments etc (incoming)

**Stage 2** (consolidation) will start on 1<sup>st</sup> August and it will end when all targets are achieved .

- Listings on crypto websites (CMC, CG etc)
- First ever donations (of 30,000\$) within first weeks after launch
- Multiple burns in exchange for accomplished tasks by the community
- Maddyswap
- Eth to BSC bridge
- Dapps: Spin the wheel, Matchers, Lottery
- Doxx event including a surprise for the community
- 100,000\$ donated to several different charitable causes

**Stage 3** (scaling-up) will start when **Stage 2** is completed.

**Stage 3** targets are as following:

- Have a swap token tax-free listed on big exchanges (e.g. Binance)
- Metaverse NFT game
- To plant 1 MILLION trees
- Donate over 10,000,000\$ to different activities regarding our planet's health.
- Our own blockchain using anaerobic digestion

**Note:** *Other plans or ideas are to be added along the way for all stages;*

### **Summary output:**

**We aim to contribute to our planet's health.** To cut it short, we will do so by constantly funding initiatives/ projects/NGOs regarding global warming, pollution, wildlife etc (e.g. anti-poachers teams or any other innovative projects that already found solutions to issues relevant to our goals) **The competitive advantages that makes us stand out are as following:**

- **Sustainable tokenomics.**  
We have constant revenue, for our salaries, investments and donations. No initial tokens hold therefore no immense bag that is sold irresponsible, in order to pay.
- **Customized token contract.** Our Chief Development Officer spent days creating a new contract with new additions compared to existing ones.
- **4 different owners, using multi-sig wallets.** It is technically impossible to make any kind of transaction without the signature of 3 out of 4 directors.
- Many **surprise unprecedented marketing/ development/charity ideas** in order to scale up the Madagascar project.

## ***Short Roadmap:***

### **❖ Stage 1 – Creation**

Started on 1st of July,

Ends when the coin launches;

### **❖ Stage 2 - Consolidation**

Starts when the coin launches;

Ends when targets are achieved;

### **❖ Stage 3 - Scaling-up**

Starts when Stage 2 is completed;

Ends when targets are achieved.

## Meet The Team

Meet the skilled people working hard to make Madagascar \$TIME even greater every day...

My name is Corey AKA @friendlyfossa from Southern California in the United States. I am the social media manager and I make all the graphics

My name is Raymond From Texas. I am the Tech Dev/ Programmer for Madagascar \$TIME.

My name is Armand AKA @hastygecko also known for @misterbetershillier. My main job is to coordinate shillings on all platforms and the main copywriter of our project.

Hey I'm Ryan, aka @theresilientrockhopper, Chief marketing officer. when I met the rest of the team I already knew they were going to be more than just mates.
