INTRODUCTION

Introducing Zelda 2.0: A Cryptocurrency with a Purpose

The cryptocurrency industry has seen its share of ups and downs, with a history of lost trust and discomfort among investors. That's why a group of like-minded individuals has come together to create a new and innovative cryptocurrency called Zelda 2.0. Our goal is to provide not only a trustworthy token, but also a revolutionary platform that will impact the world in a positive and meaningful way.

At Zelda 2.0, we believe that crypto is in need of a dose of morality and a team that always does what's right. Our team has a shared passion for making a difference and has worked tirelessly to bring this vision to life. The spark for our mission came from a personal tragedy. The loss of a beloved pet due to inadequate care inspired us to create a token that could help animals receive proper care and funding. We saw an opportunity to make a positive impact through cryptocurrency and its supportive community.

Zelda 2.0 is more than just a cryptocurrency, it's a movement. We're introducing a range of new utilities, including dog donations, staking, NFTs, and an AI-integrated dog training app. The app will allow users to sell their dog-related services and provide a platform for pet owners to receive the training and guidance they need to care for their furry friends. Our goal is to bring together a community of animal lovers from around the world and provide them with the tools and resources they need to make a difference.

We're not here to teach you how to invest, but to invite you to join us on a journey that promises to do incredible things. With Zelda 2.0, we believe we can start a revolutionary movement that will bring together animal lovers and crypto enthusiasts. Join us on this amazing adventure and let's blast past the moon together!

MISSION

We are excited to introduce you to our revolutionary project, Zelda 2.0. Our mission is simple yet powerful – to make a difference in the lives of dogs and their rescues and shelters across the world. With the help of our community, we aim to bring about a positive change in the lives of dogs and bring their welfare to the forefront.

At Zelda 2.0, we understand the importance of trust when it comes to cryptocurrency. That is why we have put together a team of highly qualified individuals, who are dedicated to making this project one of the top projects in 2023. With their expertise, we are confident that Zelda 2.0 has the potential to go far with the support of our community.

One of the key features of Zelda 2.0 is its transparency. Unlike other projects, we believe that our community deserves to know where their contributions are going. That is why we will have a DEV wallet watcher on our website, allowing our community to monitor our Marketing, Team, and Charity wallets and ensuring that they are used only for their intended purposes.

In addition to our mission of helping dogs and promoting transparency, Zelda 2.0 is also designed to be a fun and engaging token. With exciting utilities such as dog donations, staking, NFTs, and an AI integrated dog training app that will allow users to sell their dog-related services, Zelda 2.0 promises to be an all-in-one solution for dog lovers and cryptocurrency enthusiasts alike.

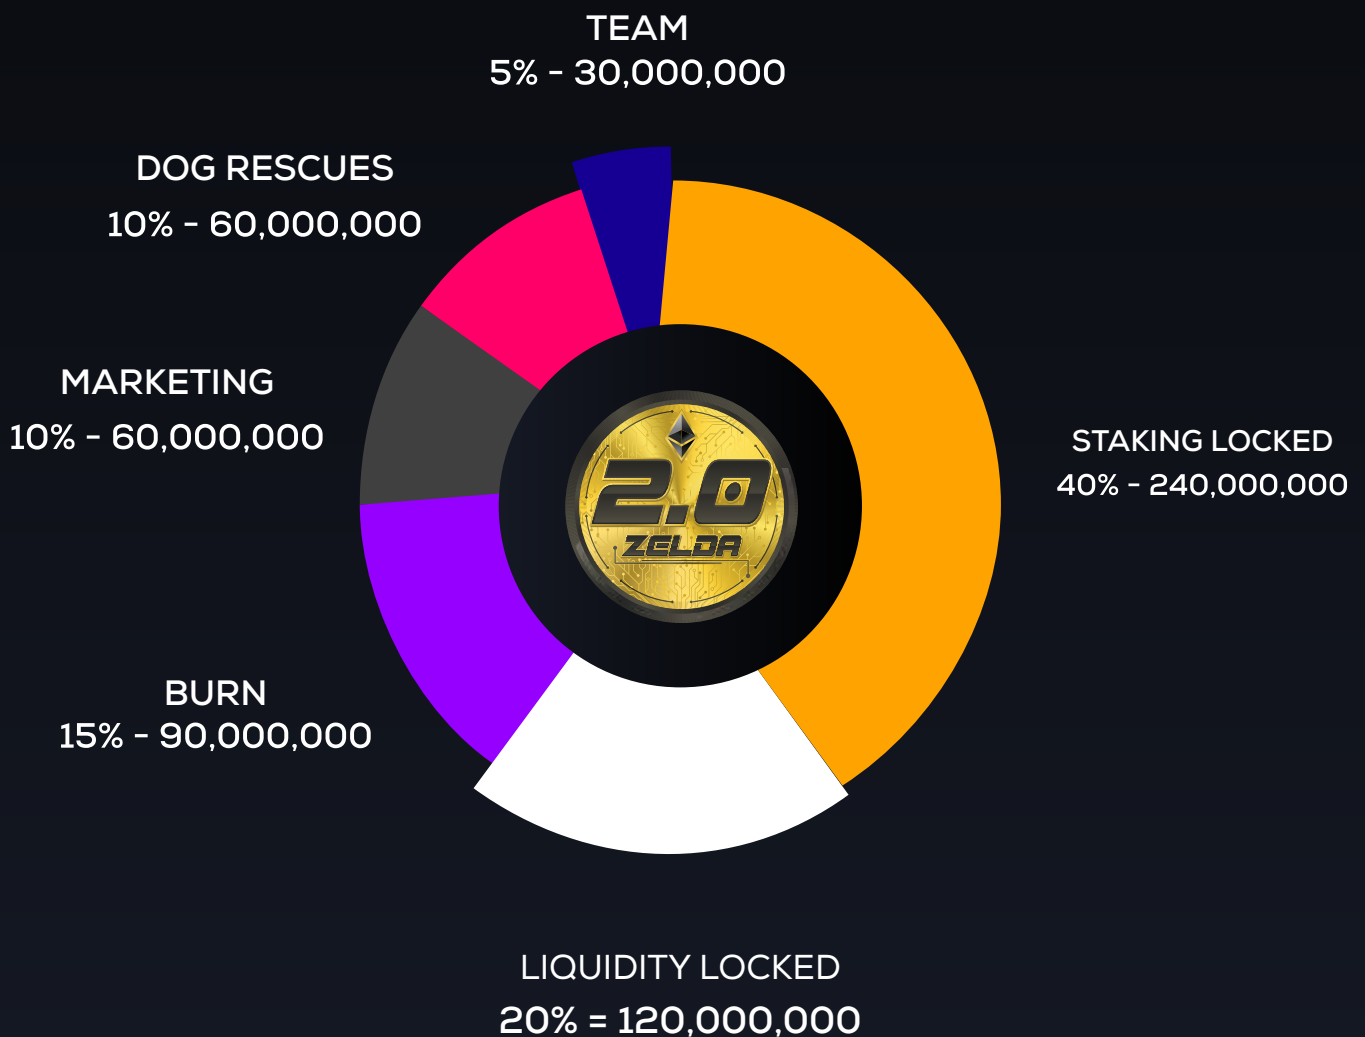

Join us on this amazing journey as we work towards making a difference in the lives of dogs and creating a revolutionary project that will make waves in the cryptocurrency world.

CIRCULATION

Total Supply - 600,000,000

From the beginning of reading the tokenomics you know what a project is about and if they are setting a good foundation for the token growth, we feel like we hit it out of the park with these numbers and hope you all agree.

TOKENOMICS

ROADMAP

BURNING

Burning is when miners or developers remove cryptocurrency tokens from circulation. The tokens are then sent to a crypto wallet that has no private key, and with no private key, there's no way the wallet can be accessed for good.

As a result,

the tokens are lost forever and circulation is lower. The concept of the crypto being permanently taken out of circulation is what started the term "burning crypto."

Many cryptocurrencies practice this method to protect their value. When the coins are burned, there are fewer in circulation and the crypto becomes more valuable.

Many tokens do not have a supply cap, meaning that their supply could just keep increasing.

However, when there are too many tokens of a cryptocurrency on the market, that crypto can dramatically lose its value. Because the tokens are sent to a wallet address, the burning of tokens can be verified on the blockchain, allowing developers and users to keep track of how many tokens have been burned.

MEET THE TEAM

VINCENT

Vince and his two boys are masterminds when it comes to crypto, marketing and business development.

Currently the firm he owns is managing around 100 companies in Florida for all types of marketing, coding & web solution services. His love and passion for animals and crypto have collided full force on this project and he hopes this can be a revolutionary start of how crypto can help rescues, shelters and the world.

Trigger (on the right) is 3 years old and the best boy ever, Kobi (on left) is a little terrorist but we still love him.

JASPER

Jasper is a crypto and Web3 enthusiast. He has 10+ of business strategy and management consulting experience within the financial services, and IT industries. Currently, he is the VP of Strategy at an 80+ person (and growing daily) software development company that builds digital products and works with startups/enterprise corporations in to digitally disrupt and transform.

Personally, he has a wife, baby on the way, and a ferocious 7lb Malteepoo, Penny who loves belly rubs and playing with her red Kong.
